13. ABSTRACT (Maximum 200 words)

In this third annual report, 1991 DUI data from several diverse sources were compiled and cross-referenced for the purpose of developing a single comprehensive DUI data and monitoring system. This report presents crosstabulated information on DUI arrests, convictions, court sanctions, administrative actions and alcohol-involved accidents. In addition, this report provides an evaluation of the effectiveness of alternative court and administrative sanctions (including alcohol treatment programs and license actions) upon the postconviction records of first and second DUI offenders. The postconviction driving records of DUI offenders arrested in 1989, 1990, and 1991 were evaluated for three-, two-, and one-year periods, respectively.

14. SUBJECT TERMS

% total injuries	24.0	22.9	21.9	20.7	20.1	19.1	18.2	17.6	17.5	15.9	14.5

[1]These totals were reported by the Department of Justice, Law Enforcement Information Center, and include a small number of duplicates (0.7% in 1992).

[2]1982-1990 DUI Abstracts Received taken from DMV Annual Suspension and Revocation (S&R) reports. 1991-1992 data estimated from other DMV data sources.

[3]Estimated DUI Convictions = For the years 1987-1992, these data are based on DMV annual totals of DUI abstracts of conviction received from the courts, minus duplicates, plus a projected number of abstracts not yet received. This latter number is based on an empirically derived function of the court abstract reporting rate. For the years 1984-1986, a DMV master file count of the number of DUI abstracts received (by year of violation) is used. For the years 1982-1983, these data are based on DMV S&R Report totals, proportionally adjusted by the 1984-1991 differences between the S&R Report and the annual DUI abstract totals.

[4]Total mandatory susp/ rev exceeds the number of DUI arrests because many offenders receive both an APS and postconviction susp/ rev action.

[r]Revised from prior reports.

HIGHLIGHTS OF 1994 CALIFORNIA DUI-MIS REPORT

- DUI arrests decreased by 16% in 1992, following a decline of approximately 14% in 1991. This amounts to almost a 30% drop in DUI arrests from 1990 to 1992.

- Alcohol-involved traffic fatalities decreased by 10.5% in 1992, following a 14% decline in 1991. This amounts to a 23% reduction in alcohol-involved fatalities from 1990 to 1992.

- The number of persons killed or injured in alcohol-involved accidents declined for the fifth consecutive year. This amounts to a 33% reduction in alcohol-involved fatalities and a 29% reduction in alcohol-involved injuries over this period.

- 11.1% of all 1991 DUI arrests were associated with a reported traffic accident. 52% of these accidents involved an injury or fatality.

- The average blood alcohol concentration (BAC) of a convicted DUI offender was .166% in 1991, down from .176% in 1989, but still more than double the California illegal per se BAC limit of .08%.

- Over 780,000 license suspensions or revocations were taken during the first three years of the administrative per se law, from July 1990 through June 1993.

- Among 1992 DUI arrestees, Hispanics (45.2%) surpassed Whites (43.5%) as the largest racial/ethnic group, and were arrested at a rate roughly double their adult population parity (22.5%).

- Despite the substantial overinvolvement of Hispanics in total DUI arrests, they are the only racial/ethnic group that is underrepresented in alcohol-involved accidents.

- The average age of a DUI offender is 32 years. Less than 1% of arrested DUI offenders are juveniles (under age 18).

- Among all convicted DUI offenders in 1991, two-thirds were first offenders and one-third were repeat offenders.

- 18.6% of 1991 DUI arrest cases did not show any corresponding conviction of record. This rate is down from 23.4% in 1990, a proportional decrease of over 20%.

- Alcohol treatment, in conjunction with license restriction, was the most effective sanction in reducing subsequent DUI incidents among DUI offenders.

- License suspension was the most effective sanction in reducing the total accident risk of DUI offenders arrested in 1989. Beginning in July 1990, virtually all DUI offenders were suspended upon arrest under the new administrative per se law. With the imposition of preconviction APS suspensions, the postconviction total accident rates of treatment participants was reduced toward that of the suspended groups.

- Jail, in the absence of treatment or postconviction suspension, was the least effective sanction for first offenders in terms of both DUI recidivism and subsequent accident risk.

ACKNOWLEDGMENTS

The authors acknowledge with appreciation the many individuals who have contributed to the success of this project. In particular, we wish to acknowledge the assistance of Quint Hegner and Charlotte Rhea of the Department of Justice, Statistical Analysis Center, in providing annual DUI arrest data and documentation. William C. Marsh, Research Program Specialist II, is acknowledged for his significant contributions to the methodological and analytical aspects of the project. The contributions of Debbie McKenzie, Staff Services Analyst, in transforming mainframe computer files into readable data tables and figures, as well as her general assistance in the production of this report, are acknowledged with appreciation. We also would like to acknowledge the administrative per se program data collection efforts of Patrice Rogers, Research Analyst II, the administrative direction and report review efforts of Raymond C. Peck, Chief, Research and Development Section, and the coordination of the final report production by Seresa Hartwell, Management Services Technician.

INTRODUCTION

This report is the third Annual Report of the California DUI Management Information System, produced in response to Assembly Bill 757 (Friedman), Chapter 450, 1989 legislative session (see Appendix A). This bill required the Department of Motor Vehicles (DMV) to "establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted" of DUI in order to provide "accurate and up-to-date comprehensive statistics" to enhance "the ability of the Legislature to make informed and timely policy decisions." The need for such a data source had long been documented by numerous authorities, including the 1983 Presidential Commission on Drunk Driving. In responding to this legislative mandate, this report combines and cross-references DUI data from diverse sources and presents them in a single reference. Data sources drawn upon include the California Highway Patrol (CHP) for accident data, Department of Justice (DOJ) for arrest data, and the DMV driver record database. Each of these reporting agencies, however, initially draw their data from diffuse primary sources such as individual law enforcement agencies (arrest and accident reports) and the courts (abstracts of conviction).

The general conceptual design of the California DUI management information system (DUI-MIS) is presented in Figure 1. The basic theme of the DUI-MIS is to track the processing of offenders through the DUI system from the point of arrest and to identify the frequency with which offenders flow through each branch of the system process (from law enforcement through adjudication to treatment and license control actions). Figure 1 also illustrates the relationship between offender flow and data collection at each point of the process. The initiating data source for the DUI-MIS is the DUI arrest report, as compiled by the DOJ Law Enforcement Information Center's Monthly Arrest and Citation Register (MACR) system.

Another major objective of this report is to evaluate the effectiveness of court and administrative sanctions on convicted DUI offenders. This is accomplished by examining the postconviction recidivism records (alcohol/drug-related accidents and traffic convictions) of offenders assigned to alternative sanctions, as detailed in the section on "Postconviction Sanction Effectiveness."

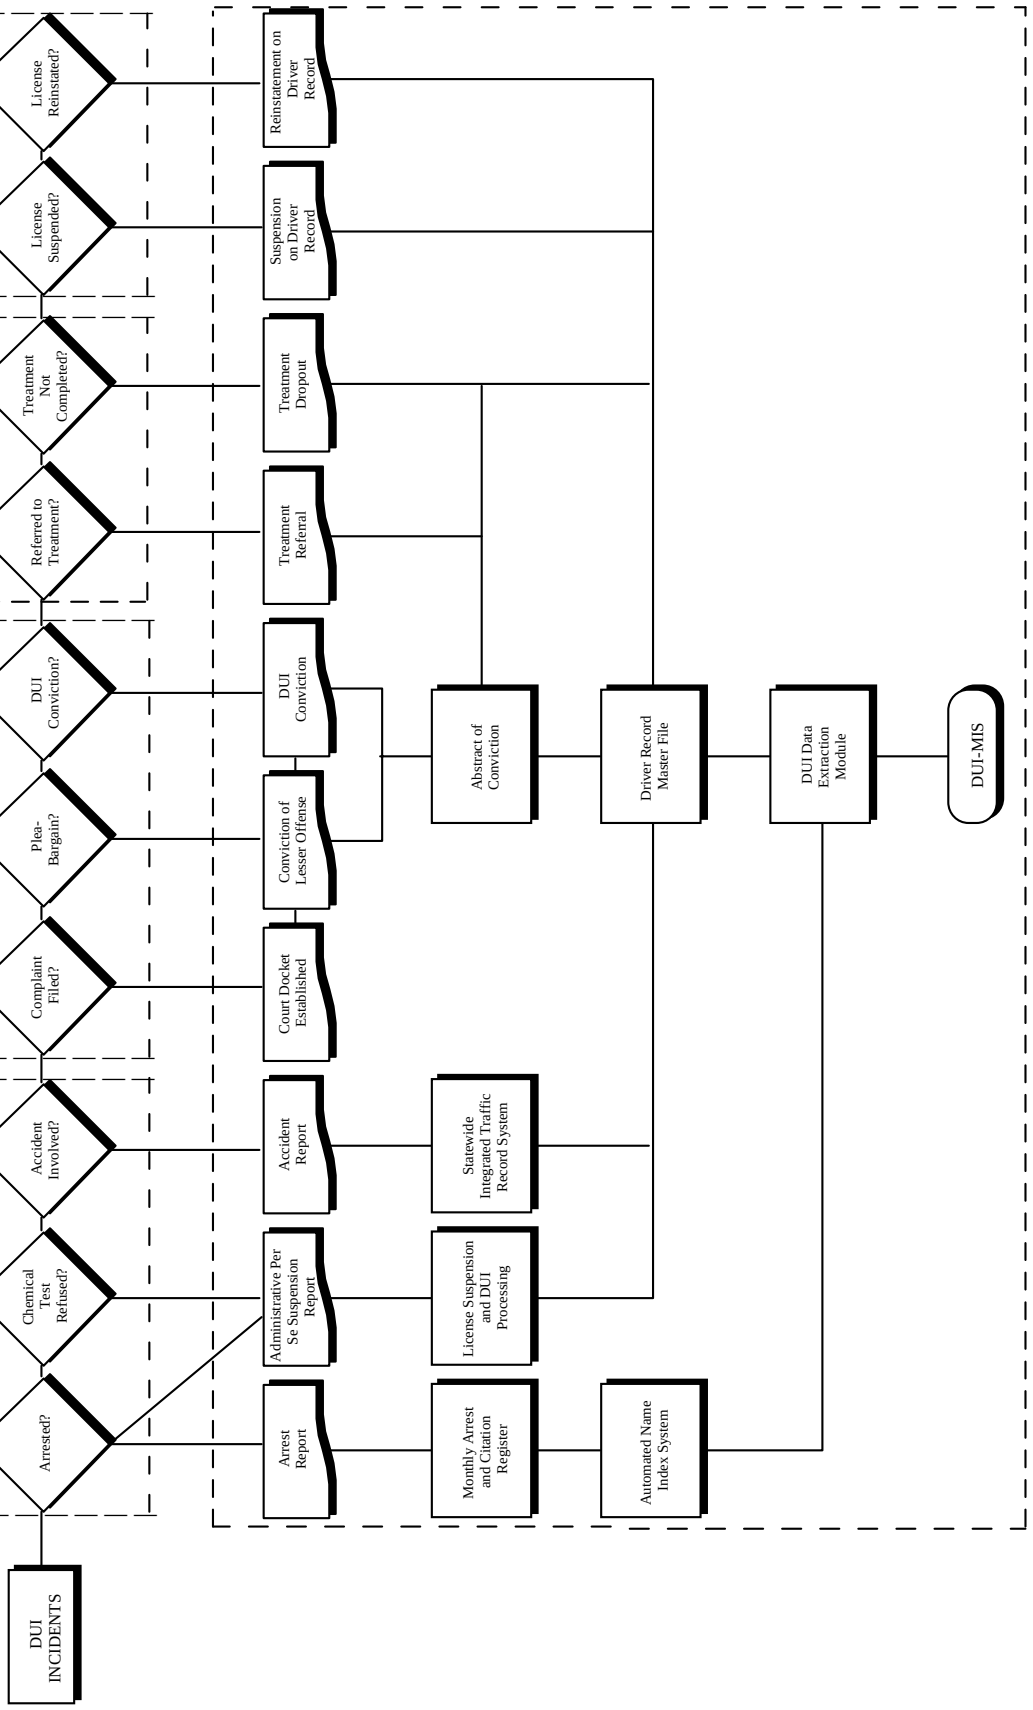

Figure 1 . DUI management information system.

It should again be noted that it is not an objective of this report to interpret, analyze or make recommendations based on the data presented. Rather, the primary purpose of a reporting system such as the DUI-MIS is to provide objective data on the operating and performance characteristics of the system for others to assess in making policy decisions, formulating improvements and conducting more in-depth evaluations. An example of how this process can work is provided by the response of Riverside County to last year's report, which included a section on the tracking of "nonconvicted" DUI arrestees. In response to the identified problem of DUI convictions not being reported or updated to the offender's driver record, the Riverside County District Attorney organized a task force of representatives from law enforcement, the courts, public policy groups, the press, state administrative agencies and the legislature, to address the situation in Riverside County. The involvement of state legislative representatives led to the development of a statewide proposal on behalf of the Business, Transportation and Housing Agency to improve the overall integrity of DUI and other traffic conviction data on the driver record database. It is exactly this feedback process of problem identification, proposed solution, and reevaluation which the DUI-MIS was designed to engender.

The use of the term "nonconviction" resulted in some misunderstanding which warrants clarification. The term "nonconvicted," as used in the prior report, was defined as a DUI arrest which could not be matched to any conviction appearing in the DMV master file. Upon investigation, it was discovered that a substantial proportion of these apparently "nonconvicted" offenders had actually been convicted by the court, but the record of conviction, for a variety of reasons, did not appear on the driver record. "Nonconvicted" was, therefore, changed in this report to "no record of any conviction". Arrests with "no record of any conviction" also include cases not filed, not prosecuted, court dismissals, not guilty verdicts, or failures to appear.

SECTION 1: DUI ARRESTS

The information presented below on DUI arrests is based primarily on data collected annually by the Department of Justice (DOJ), Law Enforcement Information Center, Monthly Arrest and Citation Register (MACR) system. These data are the most current nonaggregated data available on DUI arrests.

Table 1: DUI Arrests By County and Annual Percentage Change from 1990-1992. The number of DUI arrests by county for the years 1990-1992 and the percentage changes from 1991 to 1992 are shown in Table 1.

Tables 2a-2b: 1991 and 1992 DUI Arrests by County and Type of Arrest. These two tables show a breakdown of 1991 and 1992 DUI arrests by felony, misdemeanor and juvenile arrest type, by county. These tables also show county and statewide DUI arrest rates per 100 licensed drivers.

Tables 3a-3d: 1991-1992 DUI Arrests by Age, Sex, and Race/Ethnicity. Tables 3a and 3b crosstabulate age by sex and age by race/ethnicity of 1991 and 1992 DUI arrestees statewide. The same tabulations by county are found in Appendix Table B1. Tables 3c and 3d show the same data crosstabulated by sex and age within race/ethnicity.

Figure 2 below displays the trend in DUI arrests from 1982 to 1992.

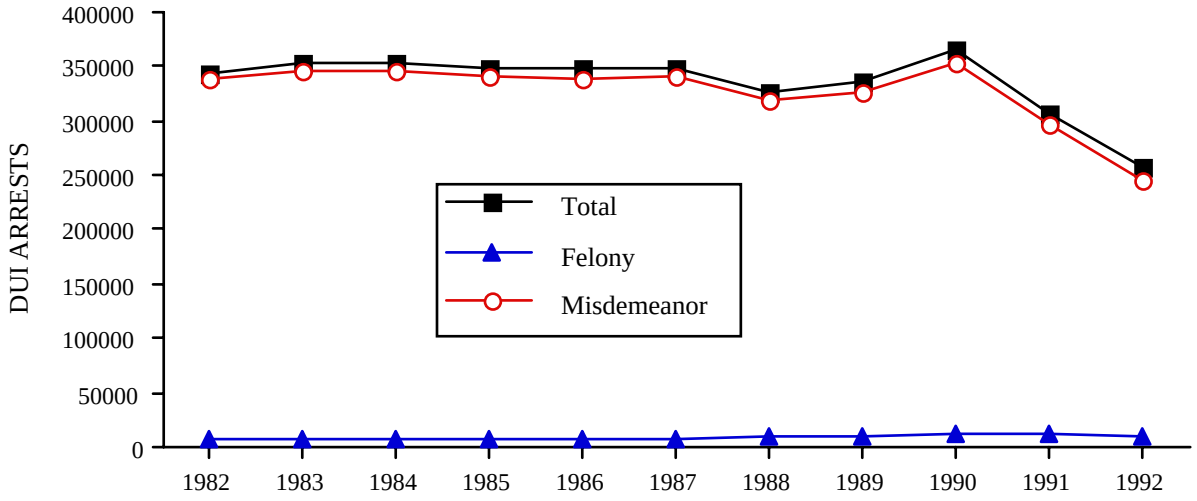

Figure 2. DUI arrests 1982-1992.

Based on the data shown in Figure 2 and Tables 1, 2a-2b, and 3a through 3d, the following statements can be made about DUI arrests in California:

Statewide Parameters:

- DUI arrests decreased by 16.1% in 1992, following a 13.7% decline in 1991. This amounts to almost a 30% drop in DUI arrests from 1990 to 1992.

- The DUI arrest rate decreased to 1.3 per 100 licensed drivers in 1992, compared to 1.5 in 1991 and 1.8 in 1990.

- Felony DUI arrests (involving bodily injury or death) constitute a relatively small proportion (3.8% in 1992) of all DUI arrests.

County Variation:

- 25% of all 1992 California DUI arrests occurred in Los Angeles County. Six counties had over 10,000 DUI arrests each, and accounted for 54% of all arrests (Los Angeles, Orange, San Diego, Santa Clara, San Bernardino, and Riverside).

- The 1992 county per capita DUI arrest rates ranged from 0.6 to 8.1 DUI arrests per 100 licensed drivers. Three counties had rates below 1.0: San Francisco (0.6), Nevada (0.9), and Contra Costa (0.9). Only four counties had rates of 3.5 or higher: Alpine (8.1), Inyo (3.7), Imperial (3.6), and Colusa (3.5).

- All counties except four showed a decline in DUI arrests in 1992. Among the larger counties, the greatest declines occurred in Los Angeles (-20.2%), Alameda (-19.4%), and Riverside (-19.1%) counties. Among the smaller counties, the largest decreases in DUI arrests occurred in Sierra (-48.0%) and Mariposa (-32.4%) counties. Counties showing increases in DUI arrests were Inyo (19.8%), Mono (15.1%), Amador (5.6%) and Siskiyou (3.2%).

Demographic Characteristics:

- The average age of a DUI arrestee in 1992 was 32.2 years. 56% of all arrestees were age 30 or younger and 85% were age 40 or younger. Less than 1% of all DUI arrests involved juveniles (under age 18). 2% of all arrestees were age 61 or older.

- Females comprised 11.3% of all 1992 DUI arrests.

- Among 1992 DUI arrestees, Hispanics (45.2%) surpassed Whites (43.5%) as the largest racial/ethnic group, and were arrested at a rate roughly double their adult population parity (22.5%, 1990 Census). All other racial/ethnic groups were

underrepresented among DUI arrestees, including Whites (43.5% of arrests, 61.2% of the population), Blacks (6.4% of arrests, 6.7% of the population) and Others (5.0% of arrests, 9.7% of the population). The percentage of Hispanic DUI arrestees (45.2%) increased substantially in 1992 compared to 1991 (40.4%), while that of White DUI arrestees (43.5%) decreased in 1992 compared to 1991 (49.9%). It should be noted, however, that the absolute numbers of DUI arrests among all racial/ethnic groups declined in 1992, with Hispanics declining at a slower rate than other groups. Figure 3 below shows the percentages of 1992 DUI arrests and 1990 Census adult population by race/ethnicity.

- Among male 1992 DUI arrestees, 48.7% were Hispanic, 40.0% were White, 6.3% were Black and 5.0% were "Other." Among female DUI arrestees, 70.2% were White, 18.1% were Hispanic, 6.8% were Black, and 4.9% were "Other."

- In 10 counties, Hispanics comprised over 50% of those arrested for DUI during 1992: Tulare (72.8%), Fresno (71.2%), San Benito (71.1%), Imperial (68.6%), Madera (66.9%), Monterey (61.6%), Los Angeles (61.5%), Merced (61.0%), Kings (59.4%), and Kern (54.8%). In all other counties, the majority of arrestees were White.

- The average age of a DUI arrestee varied considerably by race: Blacks were the oldest with a mean age of 34.7 years, while Hispanics were the youngest, with a mean age of 29.8 years.

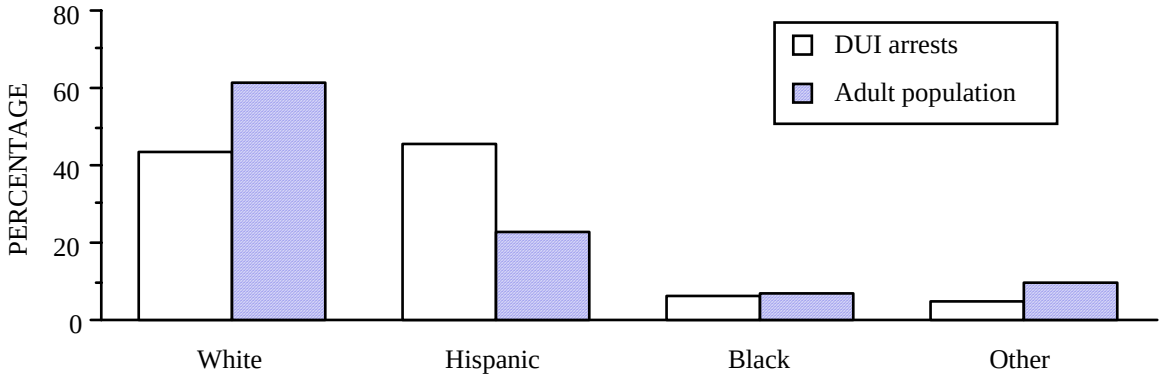

Figure 3. Percentage of 1992 DUI arrests and adult population by race/ethnicity.

SECTION 2: CONVICTIONS

Data on convictions resulting from court adjudication of DUI arrests are reported directly to the Department of Motor Vehicles (DMV) on court abstracts of conviction. The following tables compile and crosstabulate these conviction data by demographic, geographic and adjudicative categories.

Table 4: 1991 DUI Convictions by Age and Sex. This table crosstabulates statewide DUI conviction information by age and sex. Corresponding county-specific conviction data are presented in Appendix Table B2.

Table 5: Matchable 1991 DUI Convictions by Age, Race/Ethnicity and Sex. This table displays DUI conviction information by age, race/ethnicity and sex. "Matchable" DUI convictions are those which are traceable to a DUI arrest appearing on the MACR system. Because not all arrests could be matched to an existing record, these conviction totals underestimate the total number of actual convictions.

Table 6: Adjusted 1991 DUI Conviction Rates and Relative Likelihood of Conviction, by Age, and Race/Ethnicity. This table shows the relative probability of a DUI arrest leading to a DUI conviction, by age and race/ethnicity. DUI conviction totals from categories in Table 5 ("matchable DUI convictions") were increased by the proportion which matchable convictions constituted of "total DUI convictions," shown in Table 7, to arrive at the adjusted DUI conviction rates.

Table 7: Total Conviction Data for 1991 DUI Arrestees. This table portrays county and statewide DUI-related conviction data as reported to the DMV on court abstracts of conviction. Corresponding court-specific data are shown in Appendix Table B3. Convictions not reported to DMV are considered nonconvictions for the purposes of this report. Actual nonconvictions include cases where the DUI arrest was not filed, not prosecuted, or resulted in a not guilty verdict. The DUI conviction rates by county were calculated by comparing the county conviction totals with DOJ arrest totals. Because not all 1991 DUI arrests have yet been adjudicated, these conviction totals and rates will slightly underestimate the "final" figures. The DUI conviction rates shown in the "DUI Summary Statistics: 1982-1992" table at the very beginning of this report include an estimate of these late convictions, and thus are slightly higher than those shown in

Tables 7 and 8. Conviction variables include felony and misdemeanor DUI convictions, alcohol- and nonalcohol-related reckless driving convictions, convictions of "other" lesser offenses and DUI dismissals. DUI arrest dates from the DOJ MACR system were matched to driver record violation dates to identify nonalcohol-related reckless driving and "other" convictions. The average (mean) adjudication time lags from DUI arrest to conviction, and from conviction to update on the DMV database, were calculated for each county.

Table 8: Adjudication Status of 1991 DUI Arrests by County. This table shows the adjudication status (court disposition) of 1991 DUI arrests, by county. Included are the percentages of arrests which have resulted in DUI convictions (misdemeanor or felony), reckless driving convictions (alcohol-related or nonalcohol-related), convictions of "other" offenses, or no reported conviction, as of the date of writing. Again, because not all 1991 DUI arrests have yet been adjudicated, these rates will slightly underestimate the "final" rate for each category, excepting the category "no record of any conviction", which will be slightly reduced (approximately 1-2%) by the eventual adjudication of these few late cases.

Table 9: 1991 Reported Blood Alcohol Concentration (BAC) Levels of DUI Convictions. This table shows the frequency of reported BAC levels for DUI convictions. BAC levels are reported on about half of all DUI abstracts of conviction received by DMV from the courts.

Table 10: 1991 DUI Convictions by Offender Status and Average Reported BAC Level. This table displays the proportions of convicted DUI offenders by offender status (number of prior convictions), and the average (mean) BAC level and standard deviation (a measure of variability) associated with each offense level.

Figure 4 (below) shows, for the years 1982 to 1992, the number of DUI abstracts received by DMV from the courts, the estimated number of DUI convictions, and the estimated DUI conviction rate. The major difference between "DUI abstracts received" and "estimated DUI convictions" is that "DUI abstracts received" includes all amended, corrected, and dismissal abstracts, resulting in duplicate counts.

	1982	1983	1984	1985	1986	1987	1988	1989	1990	1991	1992
Estimated conviction rate	68%	69%	70%	70%	69%	69%	69%	67%	72%	78%	82%

Note: Estimated DUI convictions = see footnote to "DUI summary statistics: 1982-1992."

Figure 4. DUI abstracts received by DMV and DUI conviction volume and rate estimates, 1982-1992.

Based on these data, the following statements can be made:

Statewide Adjudication Parameters:

- The estimated DUI conviction rate increased from 78% in 1991 to 82% in 1992.

- The number of DUI abstracts of conviction received by DMV decreased 10.1% in 1992, following a 13.7% drop in the number of DUI arrests in 1991, and a 16.1% drop in DUI arrests in 1992.

- Among 1991 DUI arrests, 216,453 or 70.4% have resulted to date in DUI convictions (felony or misdemeanor). This is 2% higher than the corresponding 1990 DUI conviction rate.

- 8.5% of 1991 DUI arrests resulted in reckless driving convictions, with 15% of these not correctly reported as alcohol-related.

- 2.5% of 1991 DUI arrests have resulted in convictions of offenses other than DUI or reckless driving, as compared with only 0.5% such "other" convictions in 1990.

- 18.6% of 1991 DUI arrests have not yet resulted in any conviction on DMV's records. As additional cases are adjudicated and reported by the courts, this figure will decrease slightly.

- The average reported BAC level of all convicted DUI offenders in 1991 was 0.166%, more than double the illegal per se BAC limit of 0.08%. This average BAC level is down from 0.176% in 1989, a reduction attributable at least in part to California's January 1990 statutory change in the per se BAC level from 0.10% to 0.08% (SB 408, Leonard, 1989).

- Among convicted DUI offenders, 66.4% were first offenders, 22.2% were second offenders, 7.8% were third offenders and 3.6% were on their fourth or more offense. (The statutorily defined time period for counting priors in California is seven years.)

- The average adjudication time lags were 2.7 months from DUI arrest to conviction and 3.1 months from conviction to update on the DMV database, totalling almost 6 months from arrest to update on the offender's driving record.

Variation by County:

- Among the larger counties, 1991 DUI conviction rates varied from highs of 83% in Kern County, 82% in Ventura County, and 81.9% in Santa Clara County, to lows of 57.8% in Riverside County and 62.7% in San Bernardino County. Los Angeles County, which accounted for over 25% of all DUI arrests in the state, had a DUI conviction rate of 65.9%.

- Among the smaller counties, 1991 DUI conviction rates varied from highs of 90.1% in San Benito County and 89.2% in Mariposa County to a low of 38.8% in Sierra County. In Mariposa County, all 1991 arrested DUI offenders were convicted of some offense, as was the case for all 1990 DUI arrestees.

- The rates at which DUI arrests were plea-bargained to alcohol-related reckless driving convictions varied from over 15% in Mariposa and Santa Barbara counties to 0% in Marin and Ventura counties.

- The percentage of DUI arrests that were improperly adjudicated as nonalcohol-related reckless driving convictions varied from 0% to 7.8%. Four counties had rates above 4%: Amador, Calaveras, Imperial, and Mono.

- The percentage of DUI arrests adjudicated as minor convictions ("other" convictions) varied from 0% to 4.7%. Los Angeles (4.7%) was the only county with a rate in excess of 4%.

- In five counties, the proportion of arrestees not showing a conviction of any offense exceeded 30%. These counties were Modoc, Riverside, Sierra, Trinity, and Yolo. Six counties had nonconviction rates of 10% or less: Mariposa, Mendocino, San Benito, Shasta, Solano, and Yuba.

Variation by Court:

- As was true for 1989 and 1990, the 1991 superior court time lags were generally much longer than municipal court time lags, presumably due to the type of DUI case (felony) being adjudicated.

- Municipal court time lags from arrest to conviction varied from a high of 5.5 months in the Fontana (San Bernardino County) court to a low of 0.6 months for the Dinuba (Tulare County) court.

Demographic Characteristics:

- The average age of a convicted DUI offender in 1991 was 32.5 years.

- 50.4% of DUI convictees were aged 30 years or younger and 80.8% were 40 years or younger.

- Females comprised 12.2% of all 1991 convicted DUI offenders, compared to 11.5% of all 1991 DUI arrestees. Females were a slightly larger percentage of both arrestees (+0.6%) and convictees (+0.5%) in 1991 than in 1990.

- The racial/ethnic distribution of 1991 convictions closely paralleled that of 1991 arrests (White = 52.1%; Hispanic = 38.6%; Black = 5.6%; Other = 3.8%).

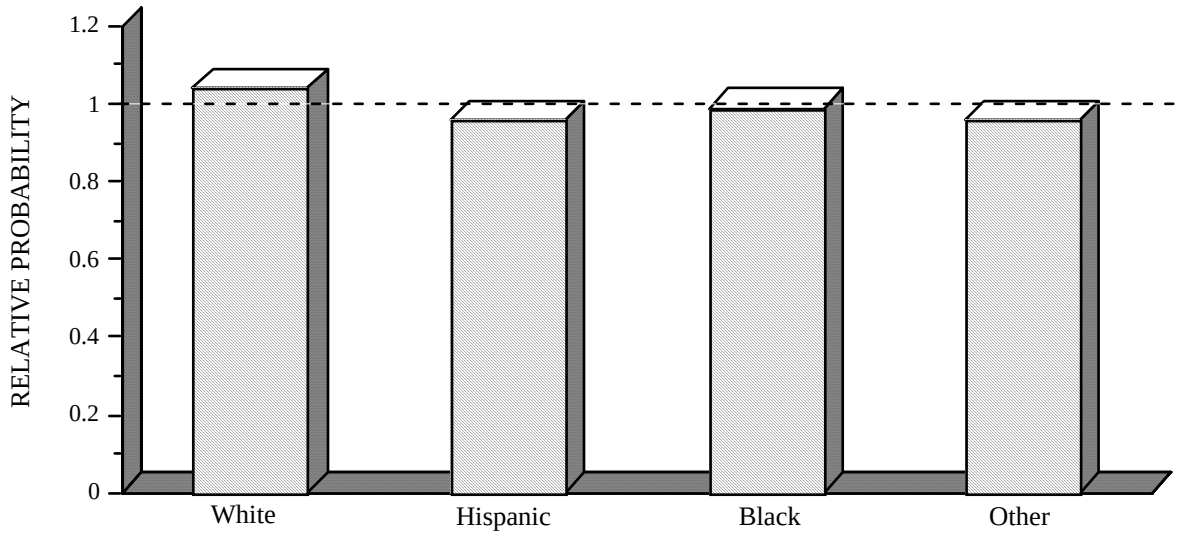

Figure 5 . Relative likehood of conviction by race/ethnicity.

3RD DUI	7.8	.180	.058
4TH+ DUI	3.6	.179	.066

SECTION 3: POSTCONVICTION SANCTIONS

Data on court sanctions assigned to convicted DUI offenders were taken from DUI abstracts of conviction for offenders arrested in 1991. Also included are counts of postconviction DMV license actions for selected offender groups, while total counts of all license actions, including Administrative Per Se (APS) license suspensions and revocations, are shown in the Administrative Actions Section. APS actions (effective July 1990) are initiated by law enforcement immediately upon arrest for DUI, and are administered independent of the criminal adjudication process. This section includes the following tables:

Table 11: 1991 DUI Court Sanctions by DUI Offender Status. This table shows the frequency of specific court sanctions statewide by number of prior DUI convictions. The specific court sanctions tallied include percentages of probation, jail, alcohol treatment programs (first offender, SB 38 second offender program and 30-month third offender programs), license restriction and court suspension. Crosstabulations of sanctions by county, court and number of prior convictions appear in Appendix Table B4.

Table 12: 1991 DUI Sanction Combinations by County - First Offenders. This table displays the frequency of commonly assigned court sanction combinations (such as first offender alcohol program plus license restriction) by county for first DUI offenders. License suspensions include both court and DMV postconviction (non-APS) suspensions. The sanction combination groups portrayed in this table, as well as Table 13, were defined according to the conventions described in the "Evaluation Methods and Results" portion of the "Postconviction Sanction Effectiveness" section.

Table 13: 1991 DUI Sanction Combinations by County - Repeat Offenders. This table shows the frequency of commonly assigned court sanction combinations by county for second, third and fourth (or subsequent) DUI offenders. License actions include both court and DMV postconviction (non-APS) license suspensions and revocations.

From the data in these and the Appendix tables, it is evident that the use of alternative sanctions varied widely by county, court and offender status in 1991. For example:

Statewide Parameters:

- The most frequently applied court sanction among all convicted DUI offenders was probation (95%), while the least frequently used court sanction was license

suspension (8%). DUI offenders were sentenced to jail in 78% of the cases. (However, in many jurisdictions, jail is often served as community service rather than actual jail time.)

Figure 6 (below) graphically displays the statewide data from Table 11 showing the frequency of specific types of court-ordered sanctions among all convicted DUI offenders.

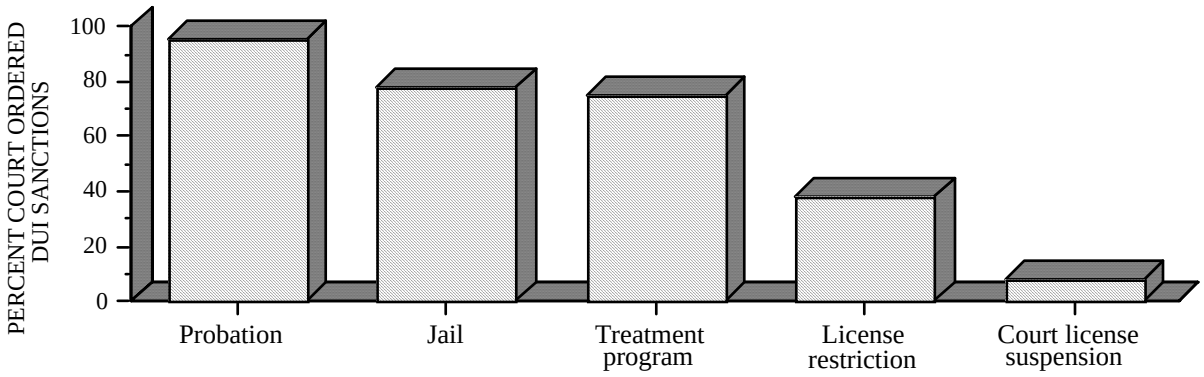

Figure 6 . Frequency of court-ordered DUI sanctions (1991).

County Variation:

- The proportion of first DUI offenders sentenced to jail varied by county from less than 6% in Alpine County to over 90% in Calaveras, Lassen, San Luis Obispo, Tuolumne, and Yuba counties.

- Counties such as Calaveras, Lassen, San Luis Obispo, Santa Cruz, Solano, Tuolumne, Yolo, and Yuba preferred to assign first offenders to treatment program and jail (over 85%) rather than treatment program and license restriction (4% or less). Marin and San Bernardino were among the larger counties that assigned treatment program and jail to less than 1% of their first offenders. Marin and Orange counties assigned treatment program and license restriction to over 75% of first offenders.

- Counties departing from using typical first offender sanction combinations were Mono, Riverside, San Bernardino, Imperial, and Fresno, as shown by relatively high percentages (12%-26%) in the "other" category. ("Other" includes license restriction without treatment program assignment, probation only, and other unofficial sanction combinations.)

Court Variation:

- In Los Angeles County, three municipal courts (Huntington Park, Lancaster, and Burbank) used jail as a sanction in more than 90% of their DUI sentences. At the other extreme, four courts (Culver City, Santa Monica, Malibu and Torrance) used jail as a sanction in less than 40% of their DUI sentences.

Variation by Offender Status:

- 69% of 1991 first DUI offenders were sentenced to jail, compared to 95% of all repeat offenders.

- 83% of first DUI offenders were assigned to alcohol treatment programs, along with 75% of second offenders, 34% of third offenders and 17% of fourth or more DUI offenders. All repeat offenders, however, must complete specified alcohol treatment programs in order to be eligible for license reinstatement.

- 11% of first DUI offenders and 28% of second DUI offenders received DMV or court license suspensions after adjudication. As of July 1990, of course, all DUI offenders with BAC levels of 0.08% or more were subject to 30 days to one-year administrative license suspension/revocation under the APS law.

TABLE 11: 1991 DUI COURT SANCTIONS BY DUI OFFENDER STATUS*

DUI OFFENDER STATUS	TOTAL	PROBATION	JAIL	1ST OFFENDER ALCOHOL PROGRAM	SB 38 ALCOHOL PROGRAM	30-MONTH PROGRAM	LICENSE RESTRICTION	COURT SUSPENSION
		%	%	%	%	%	%	%
STATEWIDE	216453	95.0	78.0	55.1	19.8	0.1	38.3	8.0
1ST DUI	143699	96.7	69.2	79.4	3.2	0.0	35.7	5.3
2ND DUI	48123	96.1	94.9	8.7	66.7	0.1	60.4	10.0
3RD DUI	16913	91.4	96.2	4.1	29.2	1.1	14.0	21.6
4TH+ DUI	7718	64.7	96.1	2.7	13.9	0.2	3.7	14.4

*Entries represent percentages of 1991 DUI convictees receiving each sanction by offender status. Sanctions within each offender status group (row) are not independent; therefore row percentages always add to more than 100%. Percentages of sanctions by county and court appear in Appendix Table B4.

SECTION 4: POSTCONVICTION SANCTION EFFECTIVENESS

This section presents and describes the results of an evaluation assessing the effectiveness of court and administrative sanctions applied to first and second DUI offenders[1]. The effectiveness of alternative sanctions is evaluated in terms of postconviction driving record as measured by: 1) total accidents, and 2) DUI incidents, including alcohol-involved accidents, major convictions (primarily DUI, also reckless driving and hit-and-run), APS or implied consent (IC) suspensions and DUI failure-to-appear notices (FTA). Displayed below are failure proportions (Figures 7-15) from the sanction analyses for 1989, 1990 and 1991 first and second offenders grouped by sanction assignment. These figures show the proportion of accident- or DUI incident-involved drivers following their conviction. They are followed by a narrative description of the evaluation design, subject selection, data collection, analytical procedures and evaluation results. The reader is cautioned that license suspension refers to postconviction suspensions only, and does not include preconviction administrative per se license suspensions.

Based on the data represented in Figures 7-12, the following conclusions can be drawn about first offender sanctions:

- Three years subsequent to conviction, the suspended 1989 first offenders continued to show fewer accident-involved drivers than did any other first offender sanction group.

- In all three years, first offenders assigned to first offender alcohol programs plus license restriction had significantly fewer DUI incidents in the postconviction period than did any other first offender sanction group.

- In all three years, first offenders sentenced to jail without treatment or postconviction suspension had a significantly greater proportion of DUI incident-involved drivers in the postconviction period than any other first offender sanction group. The 1991 jail-sanction first offender group also had the worst record of accidents over the 1-year postsanction period.

[1]Third or more offenders were not included because a previous study (Tashima & Marelich, 1989) indicated serious confounding due to group differences on prior interventions. In addition, sanctions for third and subsequent offenders do not vary much, due to the statutorily prescribed sanction requirements.

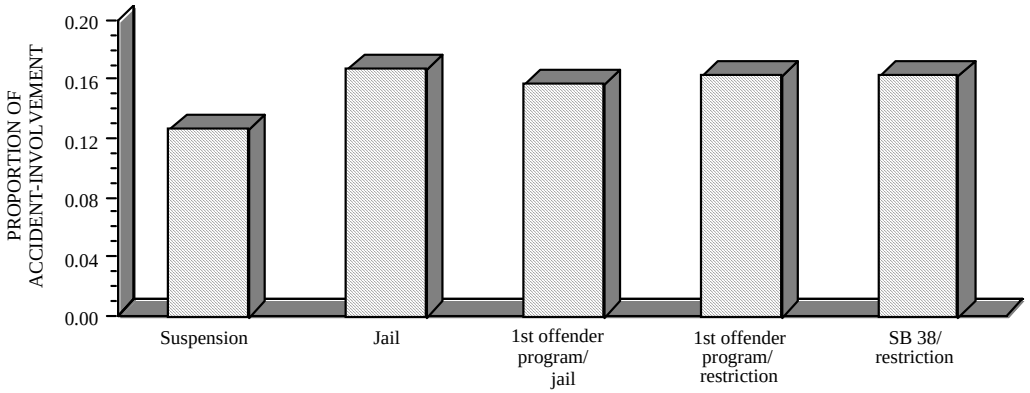

Figure 7 . Adjusted 3-year accident rates of 1989 first offenders by type of san ction

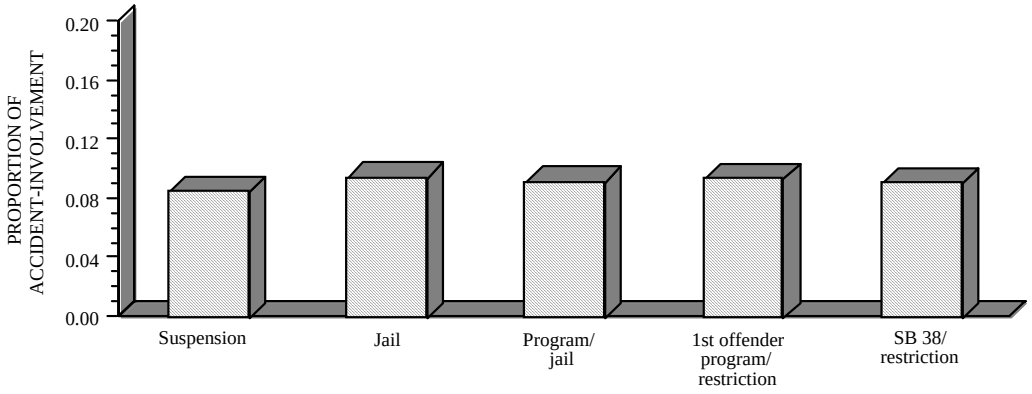

Figure 8 . Adjusted 2-year accident rates of 1990 first offenders by type of sanction.

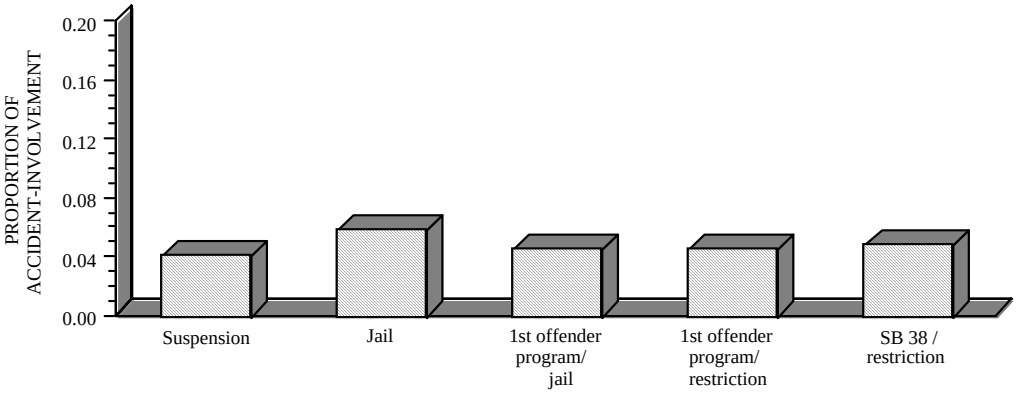

Figure 9 . Adjusted 1-year accident rates of 1991 first offenders by type of sanction.

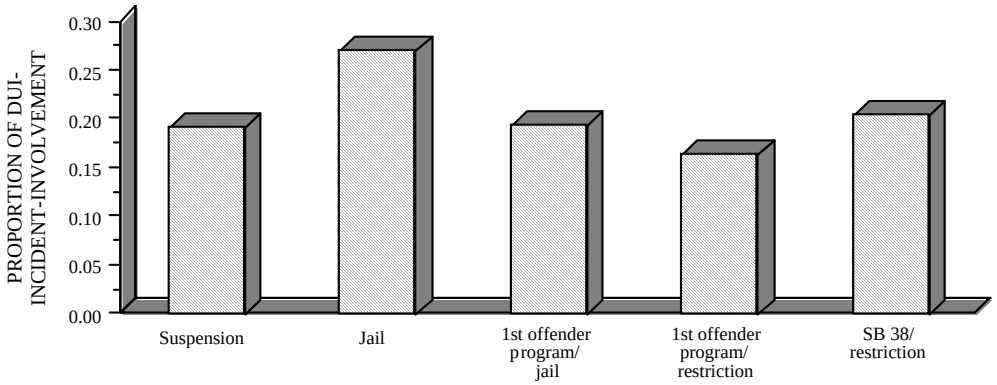

Figure 10 . Adjusted 3-year DUI incident* rates of 1989 first offenders by type of sanction. (*Alcohol-related accident or violation)

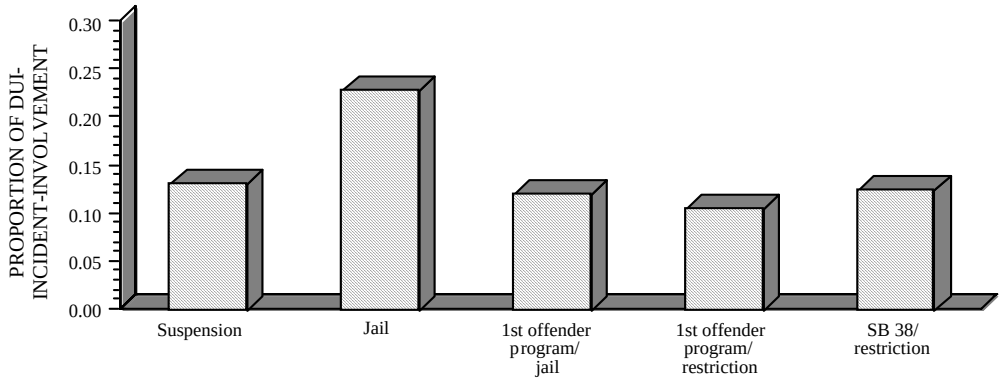

Figure 11 . Adjusted 2-year DUI incident* rates of 1990 first offenders by type of sanction. (*Alcohol-related accident or violation)

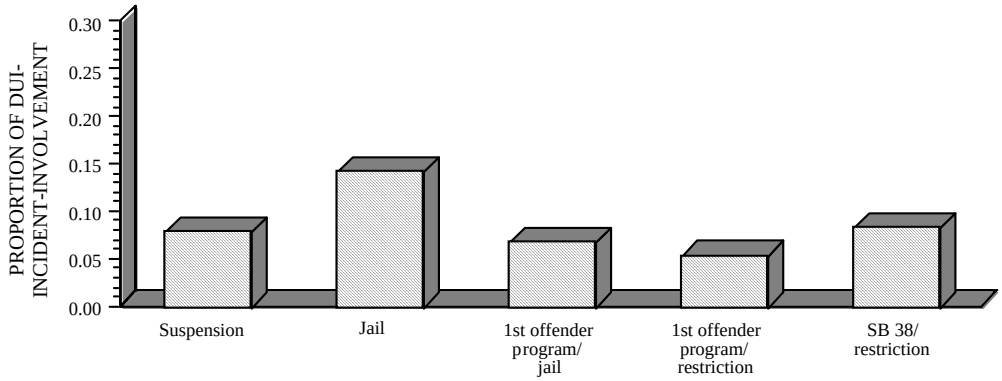

Figure 12 . Adjusted 1-year DUI incident* rates of 1991 first offenders by type of sanction. (*Alcohol-related accident or violation)

Based on the data represented in Figures 13-15, the following conclusions can be drawn about second offender sanctions:

- The 1989 suspended second offender group had 18.9% fewer accident-involved drivers than did the SB 38 program group over a 3-year postconviction period.

- Contrary to prior California studies and the first year's DUI-MIS report, second offenders suspended in 1990 and 1991 do not have significantly lower rates of total accident involvement than do those assigned to SB 38 treatment programs. This is most likely attributable to the implementation of the APS law in 1990, which resulted in virtually all offenders being suspended for a period of time, including those assigned by the court to SB 38 programs. Second offenders are suspended for one year under the APS law, but the effect for the 1990 second offenders apparently continued into the second postconviction year.

- In all three years, second offender groups sentenced to the SB 38 program plus license restriction had a significantly lower proportion of DUI incident-involved drivers than did the suspended group. At the end of three years, the 1989 suspended group had 24% more DUI incident-involved drivers than did the SB 38 program group, while at the end of 2 years, the 1990 suspended group had 55% more, and at the end of one year, the 1991 suspended group had 46% more, reoffending drivers than did the SB 38 program group.

EVALUATION METHODS AND RESULTS

Subject Selection and Data Collection

Convicted DUI offenders were identified from monthly abstract update tapes which contain all DUI conviction data reported to DMV by the courts. In the present study, follow-up data from three sets of DUI offenders were evaluated:

1) A 3-year follow-up period for the convicted 1989 DUI offenders who were evaluated in the first DUI-MIS report, and

2) A 2-year follow-up period for the convicted 1990 offenders who were cited for DUI between July and December, 1990. Since APS suspensions became effective in July

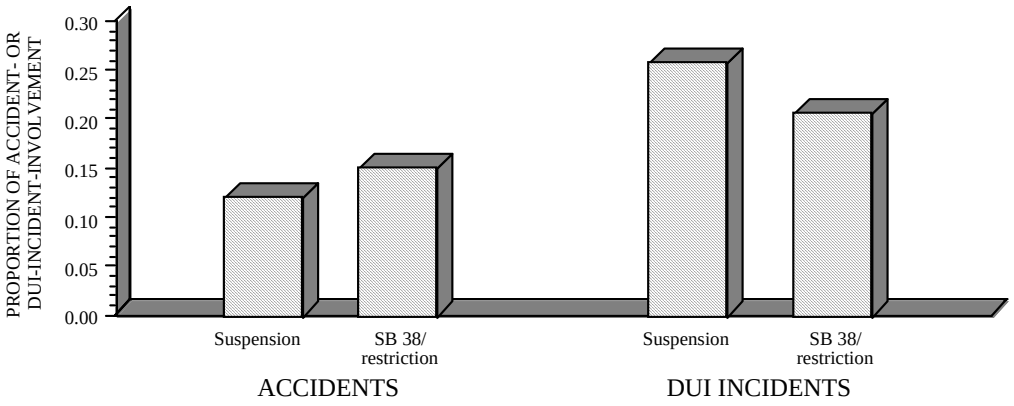

Figure 13 . Adjusted 3-year accident and DUI incident rates for 1989 second offenders by type of sanction.

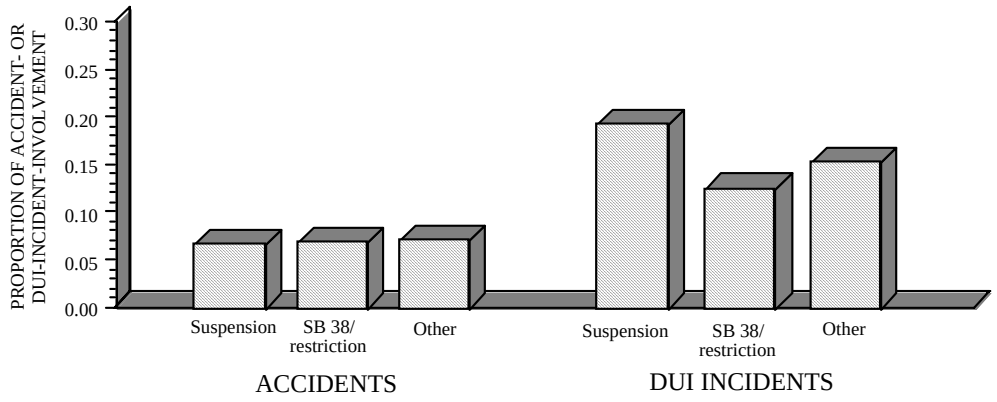

Figure 14 . Adjusted 2-year accident and DUI incident rates of 1990 second offenders by type of sanction.

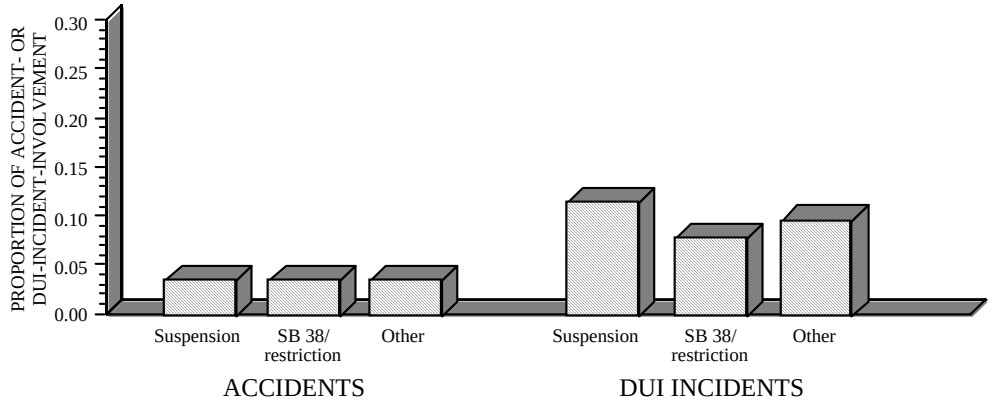

Figure 15 . Adjusted 1-year accident and DUI incident rates of 1991 second offenders by type of sanction.

1990, inclusion of 1990 offenders arrested prior to July 1990 would have confounded and complicated the analysis. Therefore, only DUI offenders subject to APS suspension were included in the 1990 analysis.

3) A 1-year follow-up period for convicted DUI offenders who were arrested for DUI in 1991. The conviction date in all cases was considered to be the 'treatment date' for defining 'prior' and 'subsequent' driving record data, because the penalties and sanctions for the DUI conviction are typically effective as of that date.

Since DUI penalties and sanctions are enhanced as a function of the number of prior DUI and alcohol-related reckless driving convictions within the previous seven years, subjects were selected based on the number of such convictions within the seven years prior to the 1991 DUI arrest. For the 1989, 1990 and 1991 drivers, two groups were selected for this evaluation: 1) first DUI offenders––drivers who had no DUI or alcohol-related reckless driving convictions within the previous seven years, and 2) second DUI offenders––drivers who had one DUI or an alcohol-related reckless driving conviction within the previous seven years.

Court sanctions are reported to and recorded by DMV in the form of disposition codes on the abstract of conviction. A convicted DUI offender, especially a first offender, might receive any one of many combinations of individual sanctions, including jail, fine, license restriction or suspension, alcohol treatment program, or probation. Therefore, in defining sanction combination groups for the purpose of this analysis, the following conventions were used for first offenders:

1) if suspension (non-APS) was one of the sanctions imposed by DMV or the court, then the offender was included in the suspension group;

2) if suspension (non-APS) was not imposed, but the offender was assigned to an alcohol treatment program, then the offender was included in one of the treatment groups, according to the type of treatment program (first offender or SB 38) and whether they were also sentenced to license restriction or jail; and

3) if neither suspension nor treatment was imposed, but the offender was sentenced to jail, then the offender was included in the jail group.

Fine and probation are generally imposed on most DUI offenders (except that probation is not usually granted to suspended first offenders), and for that reason are not included as sanctions evaluated in this report.

It should be noted that the use of the sanction combination groups was not an arbitrary analytical convention, but rather a reflection of the most common naturally occurring sanction combinations assigned by the courts. Based on the above taxonomy, five first-offender sanction combination groups are used in this analysis: 1) license suspension, 2) jail, 3) first offender treatment program plus jail, 4) first offender treatment program plus license restriction, 5) SB 38 (second offender) treatment program plus license restriction (some courts assign this sanction to a small number of first offenders).

One limitation of the above hierarchical grouping scheme is that it does not allow for an evaluation of the independent and interactive effects of each sanction as a treatment factor. Taking first offender treatment program plus jail as an example, the approach we used does not allow analysis of the separate effects of jail from the effects of the treatment program.

The second-offender sanction groups used in the analysis are: 1) license suspension, 2) SB 38 alcohol program plus license restriction, and 3) a third group of 1990 and 1991 second offenders ("other") who did not meet the selection criteria of groups 1 or 2. Most of the offenders in this third group were originally referred to an SB 38 treatment program, but were initially suspended as well, in many cases because they did not follow required procedures (e.g. show proof of program enrollment, insurance, etc.) and/or court misreporting of disposition codes. The final sanctions received by this group are unclear, which makes interpretation difficult. The "other" group was not included in the first DUI-MIS 1989 analysis and, therefore, was not included in the 1989 reanalysis.

DUI offenders with felony convictions, implied consent suspension (refusal to take a chemical test), 'X' license numbers (assigned if no California driver license number can be found), out-of-state ZIP Codes, and irregular or unofficial sanction codes (among first offenders) were excluded from the sanction analyses.

Prior driver record data were extracted for the two years preceeding an offender's DUI conviction date (Appendix Tables B5 and B6 list these variables, which were used as

covariates). The evaluation period for the postconviction driving measures, starting from the conviction date, was three years for the 1989 drivers, two years for the 1990 drivers, and one year for the 1991 drivers. A buffer period of six months was allowed between the end of the evaluation period and the data extraction date to allow for agencies to process the most recent incidents and report the data to DMV. DUI offenders who had less than the full follow-up time period (from conviction date to the buffer period) were excluded. The outcome driving measures consisted of: 1) total accidents, and 2) DUI incidents (alcohol-involved accidents, major convictions, APS or IC suspensions, or DUI failures to appear).

Evaluation Design and Analytical Procedures

Logistic regression analysis was used to evaluate the accidents and violations that occurred during the study period by comparing the proportion of accident- and DUI incident-involved drivers in each sanction group at the end of the evaluation period. Only the first incident or "failure" was evaluated since repeat failures are not considered in logistic regression analysis. This is not an important limitation with these data because the incidence of repeat failures (two or more accidents or DUI incidents) was low over the study time window. More importantly, analysis of repeat failures would be subject to confounding by court sanctions received in connection with the first failure incident. This type of confounding is avoided because multiple incidents were not included in this analysis.

Since it was not possible to randomly assign drivers to the various sanction groups, potential biases due to preexisting group differences were statistically controlled by entering into the analyses as covariates, biographical data, 2-year prior driving record data, and ZIP code indices (accident and traffic conviction averages of each driver's ZIP code area, selected ZIP code variables from the 1990 census data for the 1991 drivers). (Tables B5 and B6 show significant group differences on most of these variables.) While this "quasi-experimental" design is subject to a number of limitations in assessing cause-effect relationships, the statistical control of group differences removes at least part of the bias in group assignment and provides a more precise estimate of the relationship between type of sanction and subsequent record. It is likely, of course, that the groups also differ on characteristics not measured by, or reflected in, the covariates. The possibility of uncontrolled biases becomes particularly problematic if sanctions are commonly received by atypical offenders through self- or judicial-selectivity (e.g.,

drivers of higher socio-economic status might be more likely to receive probation than those of lower status).

In the analyses involving accidents for 1989 first offenders and DUI incidents for both first and second offenders in all three years, several significant ($p < .01$) covariate by sanction interactions were evident (statistical significance at $p < .x$ means that a differential effect between groups would occur by chance less than x% of the time). These significant interactions indicated that the relationship between the covariates and the outcome measure varied across sanction groups, and therefore, the covariates were included in the initial analyses for all three data sets to determine the magnitude of the interactions. In all analyses except one (1989 first offender accidents) where sanction differences were significant (at $p < .03$ for first offenders and $p < .06$ for second offenders), the interaction effect was only one-fourth or less that of the main effect of sanction. Since the sanction main effect had substantially greater magnitude than the interaction effects, conclusions about sanction differences were based on analyses that did not include the interactions. Only the analysis for 1989 first offender accidents included adjustment for the interaction effects (sanctions by the covariates prior minor convictions and ZIP code accident average).

Results of the First Offender Sanction Evaluation

Total Accidents: Figures 7, 8 and 9 and Table 14 display the results of the logistic regression analysis of total accidents for 1989, 1990 and 1991 first offenders. The 1989 suspended first offender group continued to show the significantly lowest proportion of accident-involved drivers relative to the other sanction groups, with 128.1 accident-involvements per 1000 drivers. However, significant differences on accidents were not evident among the 1990 first offender groups. The 1991 suspended group had significantly fewer accident-involved drivers than the jail group and the group assigned to first offender program and license restriction, and directionally fewer than the SB 38 group. All of the 1990 and 1991 first offenders were administratively suspended upon DUI arrest, which likely had an effect in minimizing variation among these groups on accident rates. (See Table 16 for a summary of significant results by sanction groups and Appendix Table B7 for comparisons of the 1989 and 1990 two-year accident rates of sanction groups.) 1991 first offenders assigned to jail had the significantly highest accident rate of all the sanction groups. Significantly different accident rates between the jail group and the other three sanction groups were not evident among the 1989 and 1990 groups. (It should be noted that the jail sanction may actually be less stringent

than other sanctions when community service is substituted for jail time, which is frequently the case.) The failure rates of the other three groups were not significantly different from each other in all three years. Based on the results shown above, suspension had the strongest effect among 1989 first offenders in reducing total accidents, while jail was the least effective sanction among 1991 first offenders.

TABLE 14: FIRST OFFENDER SANCTION EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF ACCIDENT-INVOLVED, PER 1000 DRIVERS	NUMBER OF DUI-INCIDENT-INVOLVED, PER 1000 DRIVERS
1989	Suspension	(5,414)	128.1	196.8
(follow-up period = 3 years)	Jail	(7,032)	163.1	275.4
	1st DUI program & jail	(42,489)	156.6	197.6
	1st DUI program & license restriction	(40,304)	159.9	168.3
	SB 38 program & license restriction	(4,274)	158.8	205.5
1990	Suspension	(3,399)	84.7	131.3
(follow-up period = 2 years)	Jail	(1,920)	95.2	228.7
	1st DUI program & jail	(21,293)	91.6	119.8
	1st DUI program & license restriction	(17,548)	94.1	104.9
	SB 38 program & license restriction	(2,842)	91.0	126.4
1991	Suspension	(10,165)	41.7	80.2
(follow-up period = 1 year)	Jail	(5,068)	58.6	143.9
	1st DUI program & jail	(57,551)	45.9	69.3
	1st DUI program & license restriction	(37,389)	46.8	54.7
	SB 38 program & license restriction	(6,201)	48.7	83.9

DUI Incidents: Figures 10, 11 and 12 and Tables 14 and 16 show that among the first offender groups in 1989, 1990 and 1991, the (statistically significant) lowest proportions of reoffending drivers were in the groups assigned to first-offender treatment program plus license restriction, with failure rates of 168.3, 104.9 and 54.7 per 1000 drivers, respectively. In contrast, the worst recidivism rates occurred with the jail groups for all years (275.4, 228.7, and 143.9 for 1989, 1990 and 1991, respectively). Differences in failure proportions among the other three sanction groups were not significant for the 1989 and 1990 groups, but were significantly different between these groups in 1991. Therefore, participation in the first-offender treatment program with license restriction ranked first in its effect on DUI incidents, while the jail sanction had the least impact.

Results from the first offender sanction analyses on DUI incidents continue to replicate those from previous research studies. While sanction differences on accidents were not consistent over 1989-1991, the results are not necessarily inconsistent with previous findings that supported license suspension as reducing total accident risk. All 1990 and 1991 first offenders received some type of APS suspension/restriction (one to four months). It is possible that for these years, APS suspension had an influence on total accidents but not for DUI incidents--an hypothesis that would, in fact, be consistent with prior research findings. More importantly, it is likely that failure rates for all offender groups are lower than they would have been without APS, given that APS was applied to all groups equally (see Appendix B7).

Results of the Second Offender Sanction Evaluation

Total Accidents: Among 1989 second offenders, license suspension continued to be significantly more effective than treatment program plus restriction in reducing total accident risk (see Figures 13, 14, and 15, Tables 15 and 16), three years subsequent to their convictions. The suspended group had 19% fewer accident-involved drivers than did the SB 38 program group, with failure rates (per 1,000 drivers) of 122.1 and 150.6, respectively. This finding is consistent with those of prior studies of second offenders on total accidents. However, results of the 1990 and 1991 analyses were quite different in that none of the second offender groups showed significant differences in their total accident rates. Since license suspension has been consistently effective in reducing accident risk, it is likely that the lack of significant group differences is associated with the imposition of one-year APS license suspensions on all second offenders. It appears that for the 1990 group, the effect of APS may have continued into the second subsequent year. The longer term APS suspension may have had a greater influence on

accidents than the shorter APS suspension period applied to first offenders, based on the fact that the total accident rates are higher among all 1990 and 1991 first offenders than among all second offenders (see Tables 15 and 16).

DUI Incidents: Figures 13, 14, and 15 and Tables 15 and 16 show that in all three years, the suspended groups had significantly worse failure rates (percentage differences of 24.1%, 55.2% and 46.1% for 1989, 1990 and 1991, respectively) than corresponding rates for the SB 38 program participants. The third group ("other") in the 1990 and 1991 analyses had failure rates midway between the other two groups. Failure rates of all three groups were significantly different from each other. These findings are consistent with the results of prior studies on alcohol-related incidents in showing that SB 38 programs with license restriction are associated with a reduction in subsequent DUI incidents.

TABLE 15: SECOND OFFENDER SANCTION EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF ACCIDENT-INVOLVED, PER 1000 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1 - GRP 2}}{\text{GRP 2}} \times 100$	NUMBER OF DUI INCIDENT-INVOLVED, PER 1000 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1 - GRP 2}}{\text{GRP 2}} \times 100$
1989	1) Suspension	(9,065)	122.1		257.5	
(follow-up period = 3 years)	2) SB 38 program & license restriction	(22,947)	150.6	-18.9%	207.5	24.1%
1990	1) Suspension	(3,646)	68.1		193.5	
(follow-up period = 2 years)	2) SB 38 program & license restriction	(7,858)	69.4	-1.9%	124.7	55.2%
	3) Other	(3,938)	72.1		151.5	
1991	1) Suspension	(10,808)	35.1		115.3	
(follow-up period = 1 year)	2) SB 38 program & license restriction	(18,694)	36.0	-2.5%	78.9	46.1%
	3) Other	(11,906)	35.7		96.8

Note: A significant (p<.03 for 1st offenders and p<.06 for 2nd offenders) difference between sanction groups relative to the proportion of accident-involved or DUI incident-involved drivers is represented by an "S". The group number with the 'S' indicates the group with the better (lower) rate. A nonsignificant difference is indicated by "ns". "na" means not applicable. Blanks appear in the lower half of each matrix, since the halves are identical.

SECTION 5: ADMINISTRATIVE ACTIONS

Data on DMV administrative license disqualification actions (license suspension or revocation--S/R) taken in DUI cases are presented below. These statutorily mandated actions are initiated by the receipt of either a law enforcement report (APS/IC report) or court abstract of conviction. It should be noted that multiple actions can result from a single DUI incident--for example, a single DUI arrest frequently will result in both an APS suspension and a mandatory postconviction suspension action. This section includes the following tables and figure:

Table 17: Mandatory DUI License Disqualification Actions, 1982-1992. This table shows preconviction (APS or IC) and postconviction license disqualification totals from 1982 through 1992. The postconviction totals include juvenile suspensions, first-offender suspensions, second-offender suspensions and revocations, and third- and fourth-offender revocations.

Table 18: Administrative Per Se Process Measures. This table presents process measure data for the first three years of APS implementation.

Figure 16 graphically portrays mandatory DUI license disqualification totals from 1982 through 1992.

The following statements are based on the data shown in Table 17-18 and Figure 16.

- During 1991, the first full calendar year of administrative per se license suspension, the total number of DMV DUI suspension/revocation actions increased by 60% over 1990. In 1992, the number of APS actions and total mandatory actions declined by 16% and 17%, respectively, mirroring the 16% decline in DUI arrests during the same period.

- In 1992, 228,790 administrative per se license actions were taken. Of these actions, 69% were first-offender actions and 31% were repeat-offender actions.

- Chemical test refusal actions have steadily continued to decline, and have decreased by 38% since 1982.

- The number of postconviction license actions decreased by 21% in 1992.

- During the first three years of APS implementation, requests for hearings have increased from 7% of all APS actions in FY 90/91 to 8% in 91/92 and 9% in 92/93. The APS suspension/revocation action was upheld in 87% of hearings in FYs 90/91 and 91/92, and in 82% of 92/93 hearings.

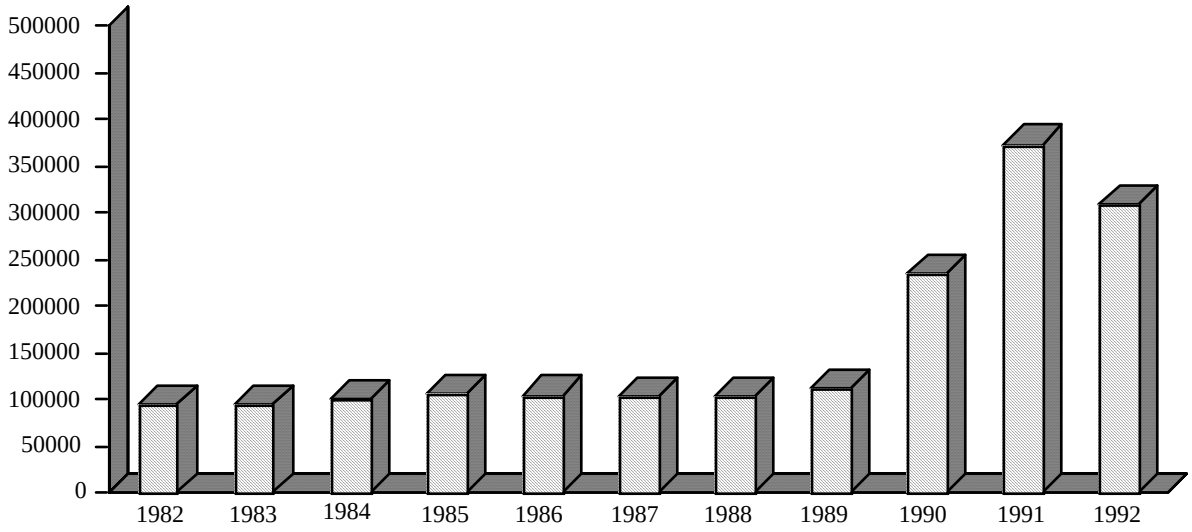

Figure 16 . Mandatory DUI license disqualification actions, 1982-1992.

Total hearings scheduled	20,462	24,419	24,497
Total hearings actually held and/or completed[e]	20,165	20,413	20,587
Total suspensions sustained or upheld following a hearing[f]	17,636	17,818	16,920
APS Chemical Test Refusal Process Measures:			
Chemical test refusal documents received from law enforcement[a]	23,438	21,012	N/A
Total APS refusal actions taken (including actions later set aside)	22,152	20,448	17,454
Suspensions	13,902	10,639	9,445
Revocations	8,250	9,809	8,009
Total APS refusal actions set aside	527	776	619
Suspension set aside	409	538	444
Revocations set aside	118	238	175
Net total APS refusal actions (excluding actions later set aside)	21,625	19,672	16,835
Suspensions	13,493	10,101	9,001
Revocations	8,132	9,571	7,834
APS refusal suspensions for subjects with no prior DUIs	11,101	10,068	8,999
APS refusal actions for subjects with prior DUIs	10,524	9,604	7,836
Suspensions	2,392	33	2
Revocations	8,132	9,571	7,834
APS refusal hearings scheduled[g]	2,925	3,287	2,988
APS refusal hearings actually held and/or completed	2,880	2,973	2,712
APS refusal actions sustained or upheld following a hearing[h]	2,424	2,444	2,220

[a] Figure obtained from Division of Driver Safety APS Monthly Production Reports.

[b] Action taken on the basis of a chemical test refusal or Blood Alcohol Concentration (BAC) test result.

[c] All entries in this category exclude actions later set aside but, where possible, include actions taken on the basis of either a chemical test refusal or a BAC test result.

[d] Prior DUI convictions consist of any such conviction where the violation occurred within the seven years prior to the current violation.

[e] Seven percent of 1990/91, eight percent of 91/92, and nine percent of 92/93 total APS actions resulted in a hearing. Both numerator and denominator include those actions set aside as a result of the hearing.

[f] The APS suspension or revocation was upheld in 87% of the BAC or refusal hearings held, for both 90/91 and 91/92 years. In 92/93, the APS action was upheld in 82% of hearings.

[g] APS chemical test refusal hearings represent 14% of 1990/91, 13% of 91/92 and 12% of 92/93 total APS hearings scheduled.

[h] The APS action was sustained or upheld in 84% of the 1990/91 and 82% of the 91/92 and 92/93 chemical test refusal hearings.

SECTION 6: ACCIDENTS INVOLVING ALCOHOL

This section presents data on alcohol-involved accidents, as compiled and reported by the California Highway Patrol, as well as accident data which have been crosstabulated with Department of Justice DUI arrest data. Drivers identified as being under the influence of drugs other than alcohol are also included in the "alcohol-involved accident" category, but comprise less than 1% of the total. This section includes the following tables:

Table 19: Race/Ethnicity by Sobriety Code of Accident-Involved 1991 DUI Arrestees. This table shows the law enforcement officer determination of sobriety for accident-involved 1991 DUI arrestees, by race/ethnicity.

Table 20: Fatal and Injury Accidents of 1991 DUI Arrestees by Race/Ethnicity and Type of Arrest. This table portrays the fatal/injury accident involvement of DUI arrestees, by race/ethnicity and type of arrest.

Table 21: Adjudication Status by Sobriety Code for Accident-Involved 1991 DUI Arrestees. This table crosstabulates accident sobriety codes (from law enforcement accident reports) with the court disposition of the 1991 DUI arrests associated with those accidents.

Table 22: Fatal and Injury Accidents of 1991 DUI Arrestees by Type of Arrest and Adjudication Status. This table displays the adjudication status of fatal and injury accident-involved 1991 DUI arrestees, by type of arrest (juvenile, misdemeanor, or felony).

Table 23: 1991 Accident-Involved DUI Arrestees With No Record of Conviction, by County and Type of Arrest. This table shows the number of accident-involved 1991 DUI arrestees without a corresponding recorded conviction, by type of DUI arrest (juvenile, misdemeanor, or felony), by county.

Figure 17 (below) shows the annual percentages of traffic injuries and fatalities that were alcohol-involved from 1982 to 1992. The numerical data for this graph are shown on the DUI summary statistics sheet at the beginning of this report.

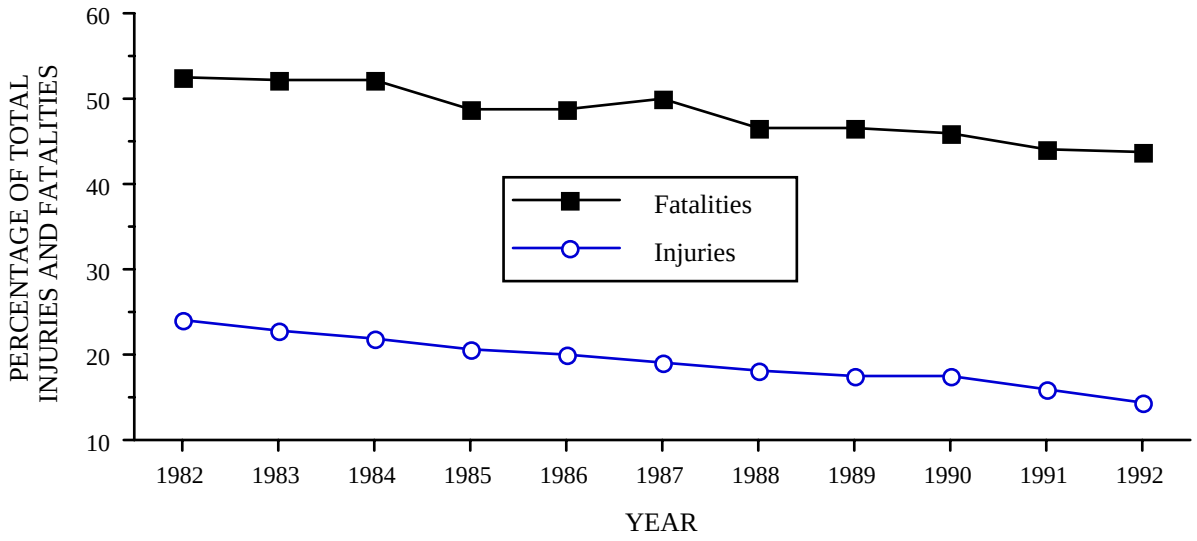

Figure 17. Percentage of total injuries and total fatalities that were alcohol-involved, 1982-1992.

Based on these data, the following statements can be made:

- The proportion of traffic accident injuries that are alcohol-involved has declined each year since 1982. Alcohol-involved injury accidents dropped 13.3% during 1992 and 28.9% from 1982 to 1992.

- Although alcohol involvement in traffic accidents has declined over the past decade, 43.8% of all traffic fatalities were still alcohol-involved as of 1992.

- 11.1% of all 1991 DUI arrests were associated with a reported traffic accident.

- In 28% of cases where a DUI offender was arrested in connection with a reported traffic accident, the offender has no record of any corresponding conviction. In 94% of these nonconvicted cases, the accident report indicated that the driver had been drinking and that their ability was impaired.

- Of all 1991 accident-involved DUI arrestees with no record of conviction, 19.4% had been arrested for felony DUI, up from 18.2% in 1990.

- 5.8% (17,744) of DUI arrests were associated with a fatal or injury accident. Of these accidents, 31% (5,466) led to a citation for felony DUI and only 8% (1,479) led to a conviction of felony DUI. 30% (5,294) of fatal/injury accident-involved DUI arrests resulted in no conviction of record.

- Only two of 34,114 accident-involved DUI arrestees were identified as being under the influence of drugs.

- Hispanic DUI arrestees in 1991 were proportionally less involved in fatal/injury and total arrest-related accidents than any other racial/ethnic group. For example, while Hispanics comprised 40.4% of all 1991 DUI arrests, they accounted for 37% of arrest-related accidents and only 34.5% of arrest-related fatal and injury accidents.

TABLE 19: RACE/ETHNICITY BY SOBRIETY CODE OF ACCIDENT-INVOLVED 1991 DUI ARRESTEES*

*These cases include only arrestees whose accidents showed alcohol or drug-impaired sobriety codes.

DATA SOURCES AND LIMITATIONS

DUI Arrest Data:

Arrest data are reported to the Department of Justice (DOJ), Law Enforcement Information Center, by individual law enforcement agencies throughout the state. As such, these data are subject to reporting errors such as incorrect names, birthdates or arrest dates. Nonreporting of arrest data due to error or omission can also occur; for example, in 1989 and 1991 the San Bernardino Police Department reported no DUI arrests, while reporting hundreds of DUI arrests in 1988, 1990 and 1992. When data are entered into DOJ's Monthly Arrest and Citation Register (MACR) system, only the highest-order offense is included. Therefore, in cases where a DUI arrest is made in conjunction with, for example, an auto theft arrest, that DUI arrest will not be included in the database. This results in systematic underreporting of the number of DUI arrests.

DUI Conviction Data:

Abstracts of conviction for DUI and other traffic-related offenses are reported to the Department of Motor Vehicles (DMV) by courts throughout the state. As abstracts are received (either hard copy, magnetic tape or through direct electronic access from the courts) they are entered onto the DMV driver record database. Abstracts without an identifying driver license number are run through the automated name index (ANI) system in order to match the abstract with an existing driver record; in cases where no such match can be made, an "X" numbered record is created to store the abstract. The total number of DUI abstracts of conviction received by DMV from the courts is tallied monthly and annually. Since this workload total includes abstracts which amend, correct or dismiss prior abstracts of conviction, it tends to overestimate the actual number of convictions which have occurred. Conviction data are also subject to reporting and nonreporting errors similar to those for DUI arrests. For example, the 1993 Annual Report of the California DUI Management Information System documented that thousands of DUI convictions showing in court records do not appear on the DMV driver record database.

Alcohol-Involved Accident Data:

Accident data are reported to the California Highway Patrol (CHP) by local law enforcement agencies and district offices of the CHP. As such, these data are subject to reporting and nonreporting errors similar to those occurring in both DUI arrest and conviction data. While most local law enforcement agencies will investigate and file reports on accidents involving injury or death, the investigation and reporting of property-damage-only accidents varies widely by local jurisdiction. Data are entered onto CHP's Statewide Integrated Traffic Records System (SWITRS) and output in annual published reports.

GLOSSARY

ADMINISTRATIVE PER SE (APS)

Administrative per se ("on-the-spot") license suspension or revocation occurs immediately pursuant to lawful arrest of a person driving with a blood-alcohol concentration (BAC) of 0.08% or more, or one who refuses a chemical test. Upon arrest, the driver's license is immediately confiscated by the law enforcement officer and an order of suspension or revocation served. The driver is issued a temporary license and allowed due process through administrative review. In July 1990, California became the 28th state to implement APS.

ALCOHOL-INVOLVED ACCIDENT

Alcohol-involved accidents are those in which the investigating law enforcement officer indicates on the accident report that the driver "had been drinking (HBD)." Accidents involving drivers who are determined to be under the influence of drugs

other than alcohol (typically less than 1% of all accidents) are also included in the alcohol-involved accident category.

ALCOHOL-INVOLVED RECKLESS DRIVING

Commonly called a "wet" reckless, alcohol-involved reckless driving refers to an arrest/conviction incident which originated as a DUI arrest. DUI arrests involving drugs which are reduced to reckless driving are also referred to as alcohol-involved or "wet" reckless driving. "Wet" reckless convictions count as priors for the purposes of enhanced penalties upon subsequent conviction of DUI.

ALPHA

Alpha is the investigator's acceptable risk or probability level of making a Type 1 error (generally chosen to be small--e.g., 1% or .01, 5% or .05). There is always some risk of a Type 1 error, so alpha cannot be zero. Alpha is also called the significance level, because it is the criterion for claiming statistical significance.

BAC

Blood alcohol concentration, or BAC, is a measure of the percent, by weight, of alcohol in a person's blood. Statutorily, BAC is based upon grams of alcohol per 100 milliliters of blood or per 210 liters of breath.

CONVICTION

Conviction of an offense, as used in this report, refers to the receipt by DMV of a court abstract of conviction. In a small proportion of cases, an offender may be convicted of an offense but that conviction is not reported to DMV. Such cases would functionally be treated by DMV as though the offender had not been convicted. Because convictions can be amended, corrected, dismissed or simply not reported at all, the conviction totals reported herein are dynamic and subject to change.

COVARIATE

A variable used to statistically adjust the results of an analysis for differences (on that variable) existing among subjects prior to the comparison of treatment effects.

DUI

DUI is an acronym for "driving under the influence" of alcohol and/or drugs, a violation of Sections 23152 or 23153 of the California Vehicle Code.

LOGISTIC REGRESSION

Logistic regression analysis is a statistical procedure evaluating the linear relationship between various factors and the occurrence or nonoccurrence of an outcome event. In this study, the procedure was used to explain the relationship between the various sanctions and the proportion of DUI offenders who incurred accidents and/or DUI incidents.

MAJOR CONVICTION

Major convictions include primarily DUI convictions, but also reckless driving and hit-and-run convictions.

p

p stands for probability. For example, if $p<.05$, the probability is less than 5 chances in 100 that the difference you found is by chance alone.

QUASI-EXPERIMENTAL DESIGNS

Quasi-experimental designs refer to analyses where the comparison groups are not equivalent on characteristics other than the treatment conditions because random assignment was not used. Caution should be excercised when interpreting the results because of possible confounding of group bias with treatment effects. Covariates are used to statistically reduce group differences prior to the comparison of treatment effects.

SIGNIFICANT (STATISTICALLY SIGNIFICANT)

If the result of a statistical test is significant, this means that the difference found is very unlikely by chance alone. How unlikely is determined by alpha.

APPENDIX A

Assembly Bill No. 757

CHAPTER 450

An act to add Section 1821 to the Vehicle Code. relating to driving offenses.

(Approved by Governor September 14, 1989. Filed with Secretary of State September 15, 1989.)

LEGISLATIVE COUNSEL'S DIGEST

AB 757, Friedman. Driving offenses: intervention programs: evaluation.

Under existing law, the Department of Motor Vehicles maintains records of driver's offenses reported by the courts. Including violations of the prohibitions against driving while under the influence of an alcoholic beverage, any drug, or both, driving with an excessive blood-alcohol concentration, or driving while addicted to any drug.

This bill would, additionally, require the department to establish and maintain a data and monitoring system, as specified, to evaluate the efficacy of intervention programs for persons convicted of those violations relating to alcohol and drugs, and to report thereon annually to the Legislature.

The bill would declare legislative findings.

The people of the State of California do enact as follows:

SECTION 1. The Legislature finds and declares as follows:

(a) Drivers under the influence of drugs or alcohol continue to present a grave danger to the citizens of this state.

(b) The Legislature has taken stern action to deter this crime and punish its offenders and has provided a range of sanctions available to the courts to use at their discretion.

(c) No system exists to monitor and evaluate the efficacy of these measures or to determine the achievement of the Legislature's goals.

(d) This lack of accurate and up-to-date comprehensive statistics hampers the ability of the Legislature to make informed and timely policy decisions.

(e) It is essential that the Legislature acquire this information, from available resources, as soon as practicable, and that this information be updated and transmitted annually to the Legislature.

SEC. 2. Section 1821 is added to the Vehicle Code, to read:

1821: The department shall establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted of violations of Section 23152 or 23153.

96 60

The system may include a recidivism tracking system. The recidivism tracking system may include, but not be limited to, jail sentencing, license restriction, license suspension. Level I (first offender) and II (multiple offender) alcohol and drug education and treatment program assignment, alcohol and drug education treatment program readmission and dropout rates, adjudicating court, length of jail term, actual jail or alternative sentence served, type of treatment program assigned, actual program compliance status, subsequent accidents related to driving under the influence of alcohol or drugs, and subsequent convictions of violations of Section 23152 or 23153.

The department shall submit an annual report of its evaluations to the Legislature. The evaluations shall include a ranking of the relative efficacy of criminal penalties, other sanctions, and intervention programs and the various combinations thereof.

TABLE B7: 1989 FIRST AND SECOND OFFENDER SANCTION EFFECTS ON 2-YEAR TOTAL ACCIDENTS AND DUI INCIDENTS

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF ACCIDENT-INVOLVED, PER 1000 DRIVERS	NUMBER OF DUI-INCIDENT-INVOLVED, PER 1000 DRIVERS
1989 First Offenders	Suspension	(5,401)	71.6	161.9
(follow-up period = 2 years)	Jail	(7,027	116.5	253.0
	1st DUI program & jail	(42,445)	106.3	170.2
	1st DUI program & license restriction	(40,256)	109.2	143.9
	SB 38 program & license restriction	(4,270)	107.7	180.9

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF ACCIDENT-INVOLVED, PER 1000 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1 - GRP 2}}{\text{GRP 2}} \times 100$	NUMBER OF DUI INCIDENT-INVOLVED, PER 1000 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1 - GRP 2}}{\text{GRP 2}} \times 100$
1989 Second Offenders	1) Suspension	(9,043)	72.5		212.6	
(follow-up period = 2 years)	2) SB 38 program & license restriction	(22,891)	92.6	-21.7%	163.1	30.3%
