13. ABSTRACT (Maximum 200 words)

In this fifth annual report, 1993 and 1994 DUI data from several diverse sources were compiled and cross-referenced for the purpose of developing a single comprehensive DUI data and monitoring system. This report presents crosstabulated information on DUI arrests, convictions, court sanctions, administrative actions and alcohol-involved accidents. In addition, this report provides an evaluation of the effectiveness of alternative court and administrative sanctions (including alcohol treatment programs and license actions) upon the postconviction records of first and second DUI offenders. The postconviction driving records of DUI offenders arrested in 1989, 1991, and 1993 were evaluated for five-, three-, and one-year periods, respectively.

14. SUBJECT TERMS
Drinking drivers, DUI tracking data system, DUI reporting system, DUI countermeasures, DUI recidivism, alcohol education and rehabilitation, driver license disqualification

% of Total Fatalities	52.2	48.9	48.7	50.1	46.6	46.6	46.0	44.1	43.8	37.7	35.3
Alcohol-Involved Injuries	67835	66667	69876	68816	65033	63937	63847	55779	48969	42936	39437
% of Total Injuries	21.9	20.7	20.1	19.1	18.2	17.6	17.5	15.9	14.5	13.6	12.5

[1]These totals were reported by the Department of Justice, Law Enforcement Information Center, and include a small number of duplicates (0.9% in 1994).

[2]These data represent a DMV master file count of the number of DUI abstracts received (by year of violation), minus duplicates. These totals do not include conviction abstracts not yet received. Thus, for the most recent years, these figures will substantially underestimate the final conviction totals.

[3]These data include a projected number of abstracts not yet received. This number is based on an empirically derived function of the court abstract reporting rate.

[4]These totals were taken from the DMV annual Suspension and Revocation reports and include late reporting of convictions from prior years.

[5]Since 1991, total mandatory suspension/revocation exceeds the number of DUI arrests because many offenders now receive both an APS and postconviction suspension/rev action.

[r]Revised from prior reports.

[r]Revised from prior reports.

HIGHLIGHTS OF 1996 CALIFORNIA DUI-MIS REPORT

- DUI arrests continued to decline in 1994 (-10.8%), and have fallen 42% since 1990.

- Alcohol-involved traffic fatalities decreased again in 1994 (-5.2%), and have dropped by almost half since 1987 (-46% overall).

- The number of persons injured in alcohol-involved accidents during 1994 declined (-8.1%) for the eighth consecutive year, resulting in a 42.7% reduction in alcohol-involved injuries over the 8-year time period.

- 13.1% of all 1993 DUI arrests were associated with a reported traffic accident, up from 11.1% the prior year. 49% of these accidents involved an injury or fatality.

- The average blood alcohol concentration (BAC) of a convicted DUI offender, as reported by law enforcement [on administrative per se (APS) forms], was .169% in 1993, which is more than double the California illegal per se BAC limit of .08%. The average BAC reported on 1993 DUI abstracts of conviction was 0.166%, the same as in 1991 and 1992.

- Over 1 million license suspension or revocation actions have been taken since the APS law was enacted in July 1990.

- During the first five years of APS implementation, requests for hearings have increased each year, rising from 7% of all APS actions in FY 90/91 to 12% in 94/95. The rate at which APS suspension/revocation actions are upheld after hearing has declined from 87% in FY 90/91 to 80% in 94/95. During the same time period, the sustain rate for chemical test refusal hearings has fallen from 84% to only 72%.

- Among 1994 DUI arrestees, Hispanics (46.5%) again constituted the largest racial/ethnic group, and were arrested at a rate over double their adult population parity (22.5%, 1990 Census).

- The average age of a DUI offender in 1994 was 32.9 years. Less than 1% of arrested DUI offenders are juveniles (under age 18).

- Among convicted DUI offenders in 1993, 67.8% were first offenders and 32.2% were repeat offenders (one or more prior convictions within the previous 7 years). The proportion of repeat offenders has decreased slightly each year since 1989, when it stood at 37%.

- 18.8% of 1993 DUI arrest cases did not show any corresponding conviction on DMV records. This rate is down slightly from 19.2% in 1992, a proportional decrease of 2.1%. (It should be noted that these cases were the first subsequent to the 1993 DUI-MIS report, which identified the problem of DUI convictions not appearing on driver records. The effects of any subsequent system improvements which would reduce the number of nonrecorded DUI convictions should begin to appear with these 1993 DUI arrests, and the nominal 2.1% reduction in the "no record of any conviction" rate may represent initial evidence of the effects of these system improvements).

- Alcohol treatment, in conjunction with license restriction, was the most effective postconviction sanction in reducing subsequent DUI incidents among DUI offenders, by a minimum of 11.8% over other sanction alternatives.

- License suspension was the most effective postconviction sanction in reducing the total accident risk of DUI offenders. With the imposition of preconviction APS suspensions, beginning in July 1990, the postconviction total accident rates of all sanction groups were reduced. Because all DUI offenders were now suspended under the APS law, the incremental impact of postconviction suspension actions became less distinct.

- Jail, in the absence of treatment or postconviction suspension, was the least effective sanction for first offenders in terms of DUI recidivism, with a minimum of 24.7% more DUI incidents than the next least effective sanction.

INTRODUCTION

This report is the fifth Annual Report of the California DUI Management Information System, produced in response to Assembly Bill 757 (Friedman), Chapter 450, 1989 legislative session (see Appendix A). This bill required the Department of Motor Vehicles (DMV) to "establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted" of DUI in order to provide "accurate and up-to-date comprehensive statistics" to enhance "the ability of the Legislature to make informed and timely policy decisions." The need for such a data system had long been documented by numerous authorities, including the 1983 Presidential Commission on Drunk Driving. In responding to this legislative mandate, this report combines and cross-references DUI data from diverse sources and presents them in a single reference. Data sources drawn upon include the California Highway Patrol (CHP) for accident data, Department of Justice (DOJ) for arrest data, and the DMV driver record database. Each of these reporting agencies, however, initially draw their data from diffuse primary sources such as individual law enforcement agencies (arrest and accident reports) and the courts (abstracts of conviction).

The general conceptual design of the California DUI management information system (DUI-MIS) is presented in Figure 1. The basic theme of the DUI-MIS is to track the processing of offenders through the DUI system from the point of arrest and to identify the frequency with which offenders flow through each branch of the system process (from law enforcement through adjudication to treatment and license control actions). Figure 1 also illustrates the relationship between offender flow and data collection at each point of the process. The initiating data source for the DUI-MIS is the DUI arrest report, as compiled by the DOJ Law Enforcement Information Center's Monthly Arrest and Citation Register (MACR) system.

Another major objective of this report is to evaluate the effectiveness of court and administrative sanctions on convicted DUI offenders. This is accomplished by examining the postconviction recidivism records (alcohol/drug-related accidents and traffic convictions) of offenders assigned to alternative sanctions, as detailed in the section on "Postconviction Sanction Effectiveness."

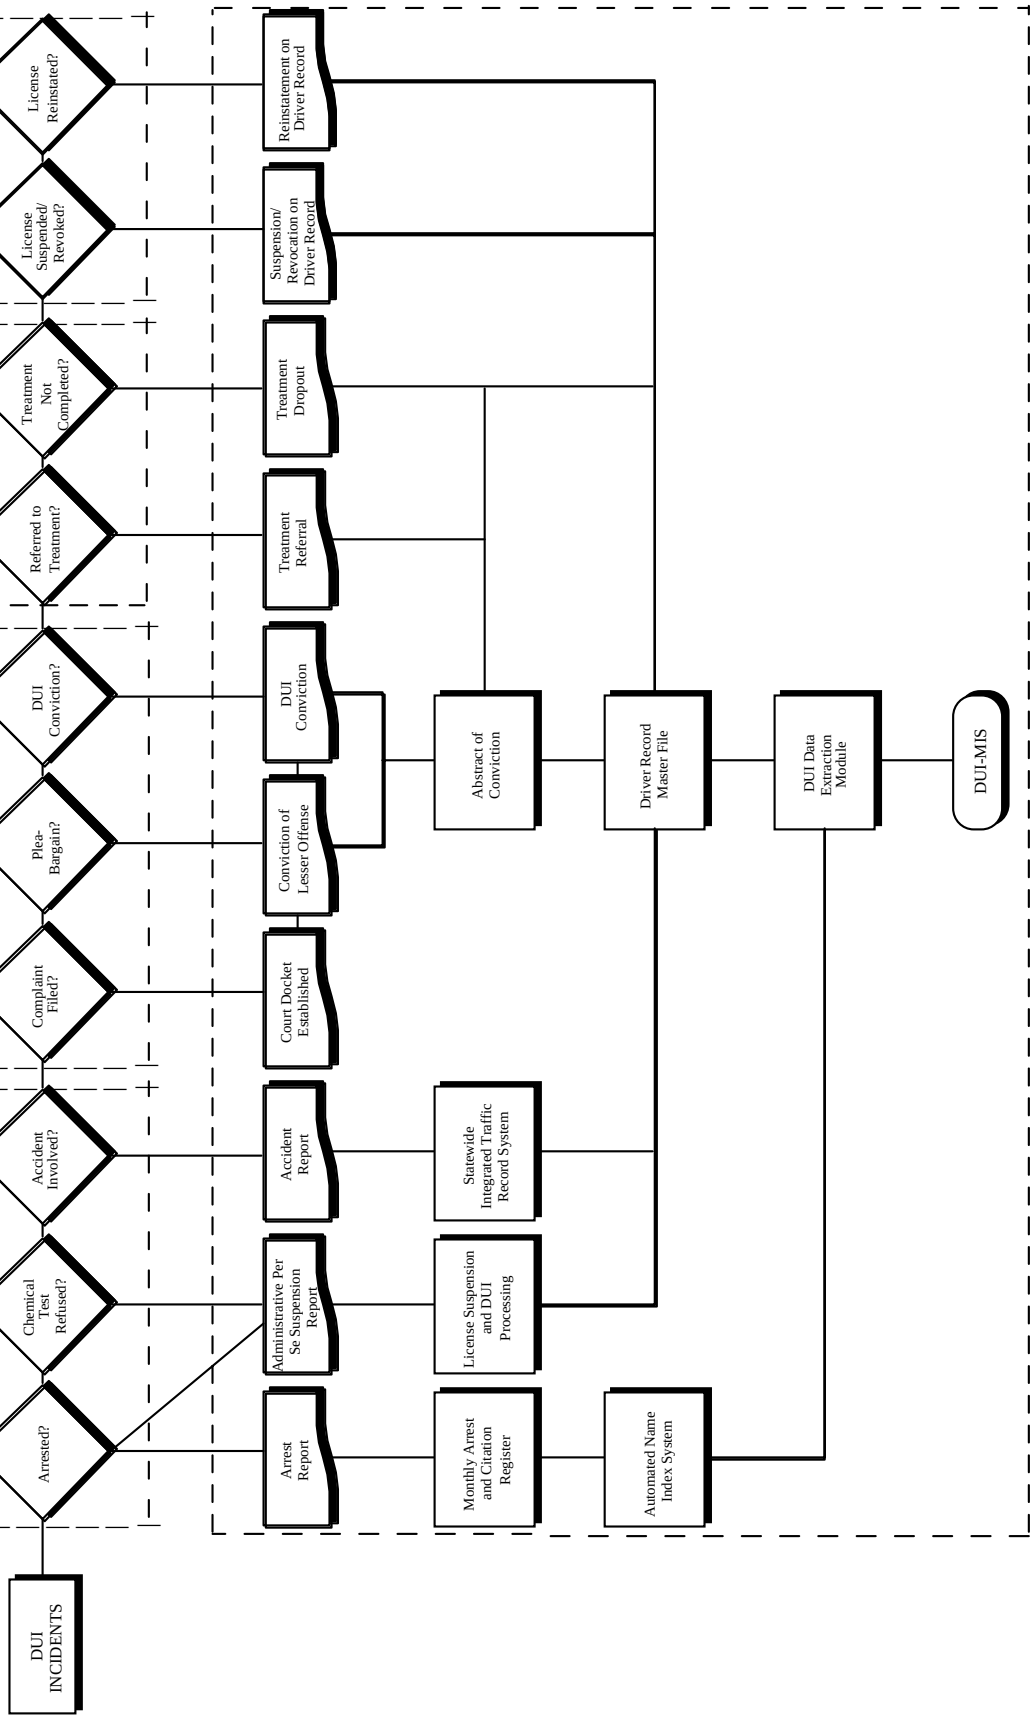

Figure 1. DUI management information system.

It should again be noted that it is not an objective of this report to interpret, analyze or make recommendations based on the data presented. Rather, the primary purpose of a reporting system such as the DUI-MIS is to provide objective data on the operating and performance characteristics of the system for others to assess in making policy decisions, formulating improvements and conducting more in-depth evaluations.

An example of how this process can work is provided by local and state agency response to the 1993 DUI-MIS report, which included a section on the tracking of "nonconvicted" DUI arrestees. In response to the identified problem of DUI convictions not being reported or updated to the offender's driver record, the Riverside County District Attorney organized a task force of representatives from law enforcement, the courts, public policy groups, the press, state administrative agencies and the legislature, to address the situation in Riverside County. The involvement of state legislative representatives led to the development of a statewide proposal on behalf of the Business, Transportation and Housing Agency to improve the overall integrity of DUI and other traffic conviction data on the driver record database. Representatives of major components of the DUI system, including law enforcement, the courts, prosecutors, and administrative agencies, met in Sacramento to discuss potential improvements in the tracking of DUI offenders. Some of these improvements have already been implemented, such as an ongoing program to identify DUI arrestees with no conviction of record and track their cases back to the court of jurisdiction for final disposition. A legislative proposal to require the reporting to DMV of all DUI failures-to-appear in court (FTAs) is also being considered. Finally, the department recently (March 1995) contracted with a private consulting firm to develop an electronic "audit" procedure for tracking all DUI cases which do not appear as convictions on DMV driver records.

It is exactly this feedback process of problem identification, proposed solution and reevaluation which the DUI-MIS was designed to engender. The success of the California DUI-MIS has contributed to a national initiative to design a model DUI reporting system, currently being developed under contract to the National Highway Traffic Safety Administration (NHTSA).

SECTION 1: DUI ARRESTS

The information presented below on DUI arrests is based primarily on data collected annually by the Department of Justice (DOJ), Law Enforcement Information Center, Monthly Arrest, and Citation Register (MACR) system. These data are the most current nonaggregated data available on DUI arrests.

Table 1: DUI Arrests By County and Annual Percentage Change from 1992-1994. The number of DUI arrests by county for the years 1992-1994 and the percentage changes from 1993 to 1994 are shown in Table 1.

Table 2: 1994 DUI Arrests by County and Type of Arrest. This table shows a breakdown of 1994 DUI arrests by felony, misdemeanor, and juvenile arrest type, by county. This table also shows county and statewide DUI arrest rates per 100 licensed drivers.

Tables 3a-3b: 1994 DUI Arrests by Age, Sex, and Race/Ethnicity. Table 3a crosstabulates age by sex and age by race/ethnicity of 1994 DUI arrestees statewide. The same tabulations by county are found in Appendix Table B1. Table 3b shows the same data crosstabulated by sex and age within race/ethnicity.

Figure 2 below displays the trend in DUI arrests from 1984 to 1994.

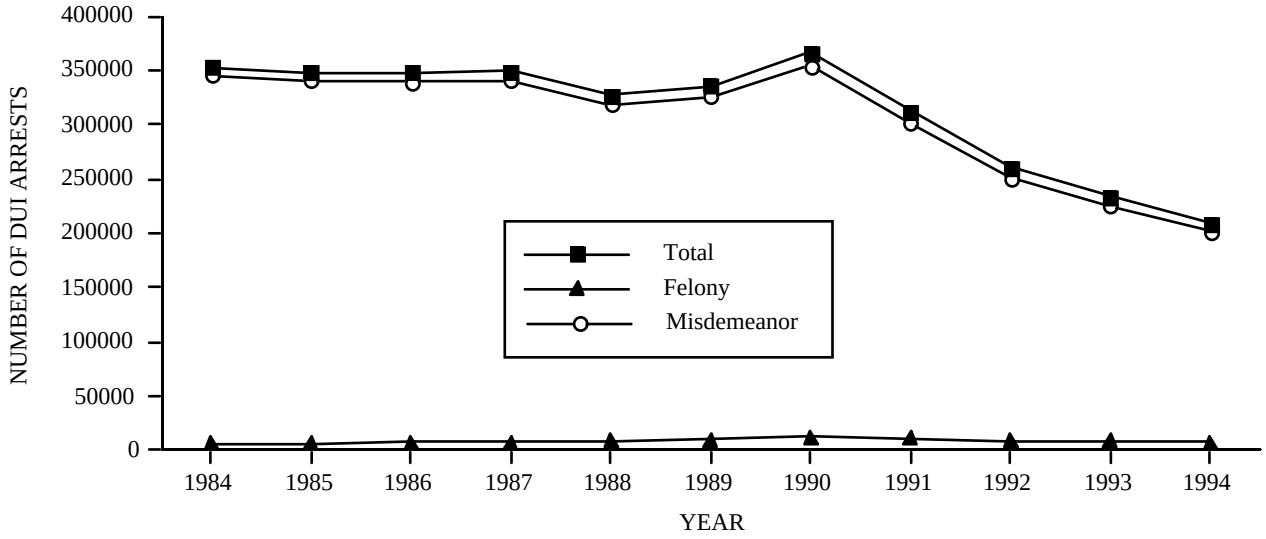

FIGURE 2. DUI ARRESTS 1984-1994.

Based on the data shown in Figure 2 and Tables 1, 2, 3a, and 3b, the following statements can be made about DUI arrests in California:

Statewide Parameters:

- DUI arrests decreased by 10.8% in 1994, following a 10.3% decline in 1993. Since 1990, DUI arrests have dropped by 42%.

- The DUI arrest rate decreased to 1.0 per 100 licensed drivers in 1994, compared to rates of 1.1 in 1993, 1.3 in 1992, 1.5 in 1991, and 1.8 in 1990.

- Felony DUI arrests (involving bodily injury or death) constitute a relatively small proportion (3.6% in 1994) of all DUI arrests.

County Variation:

- 25% of all 1994 California DUI arrests occurred in Los Angeles County. Four counties (Los Angeles, Orange, San Diego, and San Bernardino) had over 10,000 DUI arrests each, and accounted for almost half (45%) of all arrests.

- The 1994 county per capita DUI arrest rates ranged from 0.4 to 7.4 DUI arrests per 100 licensed drivers. Fourteen counties had rates below 1.0: San Francisco (0.4), Contra Costa, and Nevada (0.7), Alameda, Amador, Santa Clara, and Solano (0.8), and El Dorado, Marin, Mariposa, Orange, San Diego, Shasta, and Tuolumne (0.9). Eleven counties had rates of 2.0 or higher and of these, 3 had rates higher than 2.5: Colusa (2.6), Trinity (2.6), and Alpine (7.4). The extremely high rate for Alpine must be viewed with caution because of the extremely small population size of Alpine County (N = 800 licensed drivers in 1994).

- Most counties again showed a decline in DUI arrests in 1994. Among the larger counties, the greatest decline occurred in Santa Clara County (-15.7%). Among other counties, the largest decreases in DUI arrests occurred in Sierra (-43.3%), Amador (-40.0%), San Benito (-25.7%), Del Norte (-24.4%), Imperial (-23.4%), and Mariposa (-23.3%) counties. Among counties showing increases in DUI arrests were Trinity (15.9%), Modoc (14.2%), Alpine (9.3%), Tehama (5.8%), Tuolumne (1.3%), Orange (1.2%), and Lassen (0.4%).

Demographic Characteristics:

- The average age of a DUI arrestee in 1994 was 32.9 years. Roughly half (48.9%) of all arrestees were age 30 or younger and almost 80% (78.9%) were age 40 or younger. Less than 1% of all DUI arrests involved juveniles (under age 18). 2.2% of all arrestees were over age 60.

- Males comprised 88.4% of all 1994 DUI arrests.

- Among 1994 DUI arrestees, Hispanics (46.5%) continued to be the largest racial/ethnic group, and were arrested at a rate over double their adult population parity (22.5%, 1990 Census). Among other racial/ethnic groups, Blacks (6.7% of arrests, 6.7% of the population) were arrested in proportion with their population parity, while Whites (41.6% of arrests, 61.2% of the population), and Others (5.2% of arrests, 9.7% of the population) were underrepresented among DUI arrestees. The percentage of Hispanic DUI arrestees (46.5%) has increased substantially since 1991 (40.4%), while that of White DUI arrestees (41.6%) has decreased substantially compared to 1991 (49.9%). It should be noted, however, that the absolute numbers of DUI arrests among all racial/ethnic groups declined again in 1994. Figure 3 below shows the percentages of 1994 DUI arrests and 1990 census adult population by race/ethnicity.

- Among male 1994 DUI arrestees, 50.1% were Hispanic, 38.1% were White, 6.6% were Black, and 5.2% were "Other." Among female DUI arrestees, 68.7% were White, 19.1% were Hispanic, 7.5% were Black, and 4.8% were "Other."

- In the following 9 counties, Hispanics comprised over 60% of those arrested for DUI during 1994: Tulare (78.0%), Madera (72.0%), Fresno (71.7%), San Benito (71.3%), Imperial (70.2%), Merced (64.8%), Monterey (64.2%), Los Angeles (62.4%), and Kings (62.0%). In most other counties, the majority of arrestees were White.

- The average age of a DUI arrestee varied considerably by race: Blacks were the oldest with a mean age of 35.2 years, while Hispanics were the youngest, with a mean age of 30.4 years.

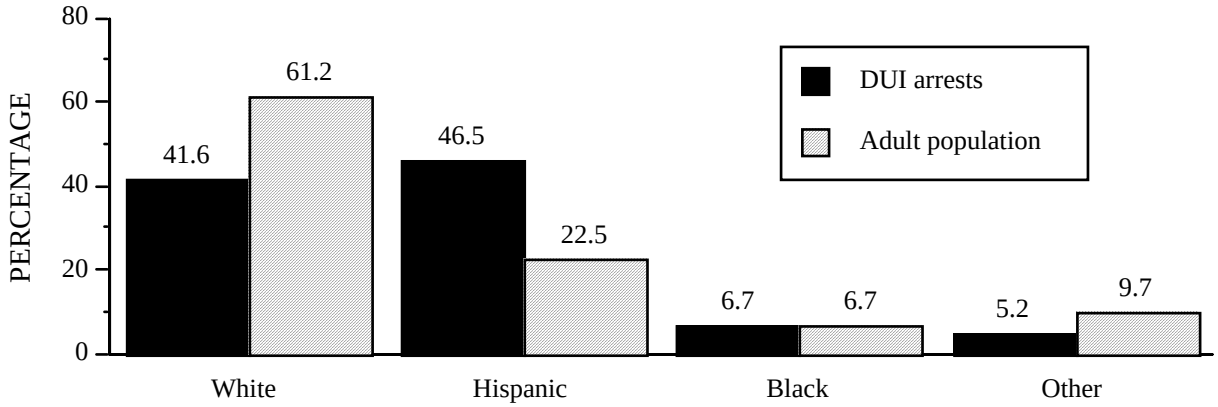

Figure 3 . Percentage of 1994 DUI arrests and adult population by race/ethnicity.

SECTION 2: CONVICTIONS

Data on convictions resulting from court adjudication of DUI arrests are reported directly to the Department of Motor Vehicles (DMV) on court abstracts of conviction. The following tables compile and crosstabulate these conviction data by demographic, geographic, and adjudicative categories.

Table 4: 1993 DUI Convictions by Age and Sex. This table crosstabulates statewide DUI conviction information by age and sex. Corresponding county-specific conviction data are presented in Appendix Table B2.

Table 5: Matchable 1993 DUI Convictions by Age, Race/Ethnicity, and Sex. This table displays DUI conviction information by age, race/ethnicity, and sex. "Matchable" DUI convictions are those which are traceable to a DUI arrest appearing on the MACR system. Because not all arrests could be matched to an existing record, these conviction totals underestimate the total number of actual convictions.

Table 6: Adjusted 1993 DUI Conviction Rates and Relative Likelihood of Conviction, by Age and Race/Ethnicity. This table shows the relative probability of a DUI arrest leading to a DUI conviction, by age and race/ethnicity. DUI conviction totals from categories in Table 5 ("matchable DUI convictions") were increased by the proportion which matchable convictions constituted of "total DUI convictions," shown in Table 7, to arrive at the adjusted DUI conviction rates. Without this adjustment DUI conviction rates would be underestimated using the conviction data from Table 5 because not all reported convictions are "matchable" to an arrest.

Table 7: Total Conviction Data for 1993 DUI Arrestees. This table portrays county and statewide DUI-related conviction data as reported to the DMV on court abstracts of conviction. Corresponding court-specific data are shown in Appendix Table B3. Convictions not reported to DMV are considered nonconvictions for the purposes of this report. Actual nonconvictions include cases where the DUI arrest was not filed, not prosecuted, or resulted in a not guilty verdict. The DUI conviction rates by county were calculated by comparing the county conviction totals with DOJ arrest totals. Because not all 1993 DUI arrests have yet been adjudicated, these conviction totals and rates will slightly underestimate the "final" figures. The DUI conviction rates shown in the "DUI Summary Statistics: 1984-1994" table at the very beginning of this report include an estimate of these late convictions, and thus are slightly higher than those shown in

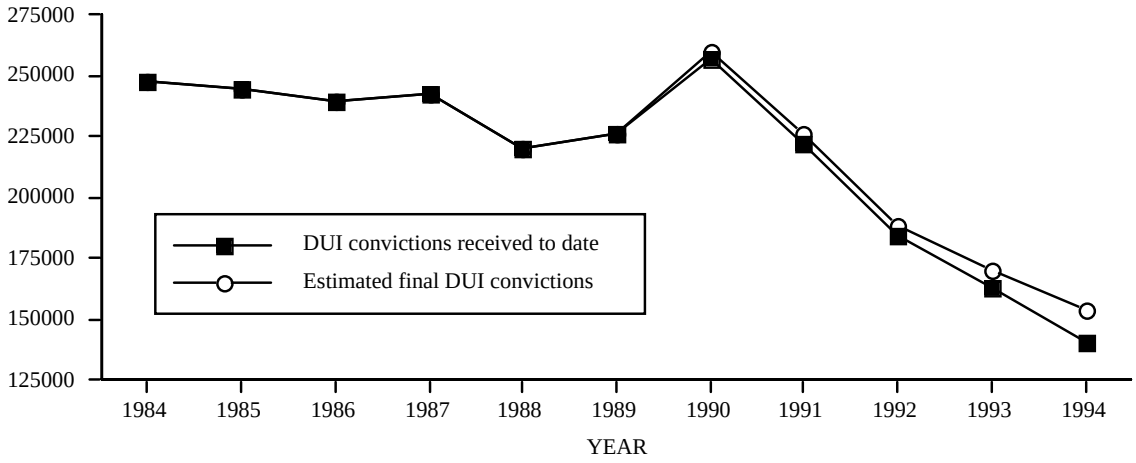
Tables 7 and 8. Conviction variables include felony and misdemeanor DUI convictions, alcohol- and nonalcohol-related reckless driving convictions, convictions of "other" lesser offenses, and DUI convictions dismissed or found unconstitutional. DUI arrest dates from the DOJ MACR system were matched to driver record violation dates to identify nonalcohol-related reckless driving and "other" convictions. The average (mean) adjudication time lags from DUI arrest to conviction, and from conviction to update on the DMV database, were calculated for each county.

Table 8: Adjudication Status of 1993 DUI Arrests by County. This table shows the adjudication status (court disposition) of 1993 DUI arrests, by county. Included are the percentages of arrests which have resulted in DUI convictions (misdemeanor or felony), reckless driving convictions (alcohol-related or nonalcohol-related), convictions of "other" offenses, or no reported conviction, as of the date of writing. Again, because not all 1993 DUI arrests have yet been adjudicated, these rates will slightly underestimate the "final" rate for each category, excepting the category "no record of any conviction," which will be slightly reduced (approximately 1-2%) by the eventual adjudication of these few late cases.

Table 9: 1993 Reported Blood Alcohol Concentration (BAC) Levels of DUI Convictions. This table shows the frequency of reported BAC levels for DUI convictions. Because of more complete reporting of BAC levels on APS reporting forms (70%), those reports are used, beginning with this year's report, to calculate statewide BAC levels. Abstracts of conviction, which were used in prior evaluations, report BAC levels in only 52% of cases.

Table 10: 1993 DUI Convictions by Offender Status and Average Reported BAC Level. This table displays the proportions of convicted DUI offenders by offender status (number of prior convictions), and the average (mean) BAC level from APS reporting forms and abstracts of conviction, for each offense level.

Figure 4 (below) shows, for the years 1984 to 1994, the number of DUI abstracts received to date by DMV from the courts, the estimated final number of DUI convictions which will ultimately be received, and the estimated final DUI conviction rate.



Estimated final conviction rate	70%	70%	69%	69%	67%	67%	71%	72%	72%	73%	73%

Note. Estimated DUI convictions = see footnote 3 to "DUI Summary Statistics: 1984-1994."

Figure 4. DUI abstracts received by DMV and DUI conviction volume and rate estimates, 1984-1994.

Based on these data, the following statements can be made:

Statewide Adjudication Parameters:

- The estimated DUI conviction rate for 1994 (73%) is the same as the revised estimated rate for 1993.

- Among 1993 DUI arrests, 70% have resulted to date in DUI convictions (felony or misdemeanor). This is the same DUI conviction rate as for corresponding 1992 arrests, as reported last year.

- 8.9% of 1993 DUI arrests have resulted in reckless driving convictions, with 19% of these not correctly reported as alcohol-related. Both of these rates are slightly higher than the corresponding 1992 rates.

- 2.4% of 1993 DUI arrests have resulted in convictions of offenses other than DUI or reckless driving, as compared with 2.3% such "other" convictions in 1992.

- 18.8% of 1993 DUI arrests have not yet resulted in any conviction on DMV's records, compared to 19.2% in 1992. As additional cases are adjudicated and reported by the courts, this figure will decrease slightly.

- The average reported BAC level for all convicted DUI offenders in 1993, using APS reporting forms as the data source, was 0.169%, or more than double the illegal per se BAC limit of 0.08%. The average BAC level of these offenders, using court abstracts of conviction as the data source, was 0.166%, the same as for 1992 offenders. The difference between APS-reported and court-reported BAC levels appears to be primarily attributable to underreporting of the higher BAC levels by the courts.

- Average BAC levels increase slightly as a function of the number of prior DUI convictions, from 0.164% BAC for a first offense to 0.187% BAC for a fourth or subsequent offense.

- Among 1993 convicted DUI offenders, 67.8% were first offenders, 21.6% were second offenders, 7.4% were third offenders, and 3.2% were on their fourth or more offense. (The statutorily defined time period for counting priors in California is seven years.) The proportion of repeat offenders (32.2%) among all convicted DUI offenders has decreased slightly each year since 1989 (at which time 37% of all convictions were repeat offenses).

- The average adjudication time lags were 2.7 months from DUI arrest to conviction and 3.0 months from conviction to update on the DMV database, totalling 5.7 months from arrest to update on the offender's driving record. These time lags were slightly longer than in 1992.

Variation by County:

- Among the larger counties, 1993 DUI conviction rates varied from highs of 84.6% in Ventura County and 80.3% in Kern County, to lows of 56.2% in San Bernardino County, and 57.0% in Fresno County. Los Angeles County, which accounted for almost 25% of all DUI arrests in the state, had a DUI conviction rate of 69.9%.

- Among the smaller counties, 1993 DUI conviction rates varied from highs of 83.5% in Tuolumne County, 82.6% in Nevada County, 82.0% in El Dorado County, 81.7% in Lassen County, and 81.1% in Napa County, to a low of 32.7% in Yolo County. In Mariposa County in 1993, there were 34 more reported DUI convictions than arrests, resulting in a "conviction rate" in excess of 100%. (A substantial number of

federal DUI arrests made at Yosemite National Park are not reported to the DOJ MACR system, however. The addition of these nonreported arrests would substantially reduce the conviction rate for Mariposa County.)

- The rates at which DUI arrests were plea-bargained to alcohol-related reckless driving convictions varied from 22.6% in Mariposa County to 0% in Marin and Ventura counties.

- The percentage of DUI arrests that were improperly adjudicated as nonalcohol-related reckless driving convictions varied from 0% to 8.6%. Five counties had rates of 4% or more: Mono, Del Norte, Imperial, Sierra, and Calaveras.

- The percentage of DUI arrests adjudicated as minor convictions ("other" convictions) varied from 0% to 4.7%. Los Angeles (4.7%) and San Luis Obispo (4.5%) had rates of 4% or more.

- In nine counties, the proportion of arrestees not showing a conviction of any offense exceeded 30%. These counties were Yolo, Trinity, Sutter, Tulare, Plumas, Fresno, Imperial, San Bernardino, and Merced. Seven counties had nonconviction rates of less than 10%: Mariposa, Nevada, Yuba, Tuolumne, Mono, Inyo, and San Mateo.

Variation by Court:

- As was true for prior years, the 1993 superior court time lags were generally longer than municipal court time lags, presumably due to the type of DUI case (felony) being adjudicated.

- Municipal court time lags from arrest to conviction (for courts with more than one reported conviction) varied from a high of 5.1 months in the Trona (San Bernardino County) court to a low of 1.2 months for the Los Angeles Metro court, which is also the busiest court in the state.

Demographic Characteristics:

- The average age of a convicted DUI offender in 1993 was 33.4 years.

- 46.5% of 1993 DUI convictees were aged 30 years or younger and 78.3% were 40 years or younger.

- Females comprised 12.3% of all 1993 convicted DUI offenders, compared to 12.1% in 1992, 12.2% in 1991, 11.7% in 1990, and 11.4% in 1989.

- The racial/ethnic distribution of 1993 DUI convictions (White = 43.7%; Hispanic = 45.0%; Black = 6.5%; Other = 4.7%) generally paralleled that of 1993 arrests, although Whites were somewhat more likely, and other groups somewhat less likely, to be convicted of the offense (as shown in Figure 5 below).

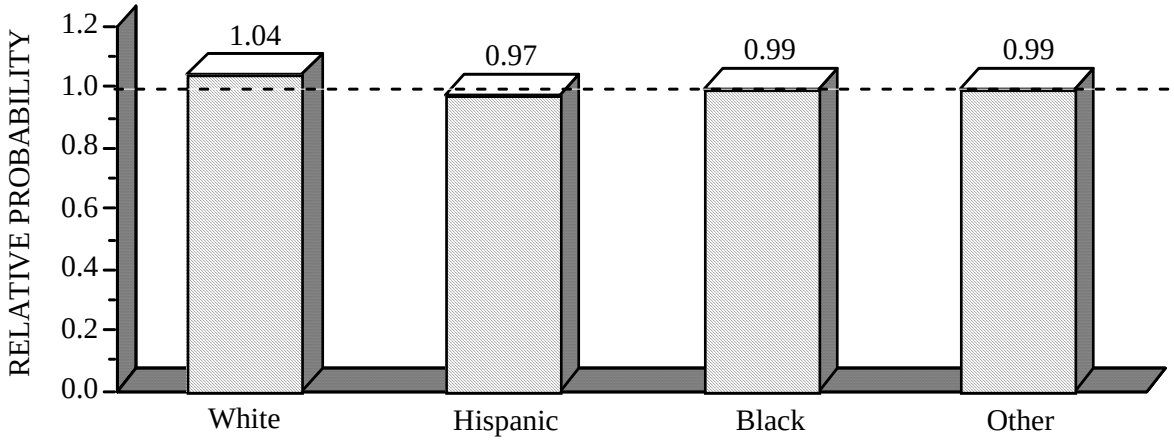


Figure 5. Relative likelihood of conviction by race/ethnicity.
(Adjusted conviction rate by ethnicity ÷ overall conviction rate.)

*Conviction data by court are found in Appendix Table B3.

**These may include dismissals of prior failure to appear (FTA) abstracts.

***These 1993 arrestees showed prior DUIs declared unconstitutional on their records. The counties reported here are those in which the current DUI conviction occurred and not necessarily those in which a prior conviction was declared unconstitutional.

****More convictions than arrests were reported, resulting in a percentage total of 100. (See pp. 13-14 for explanation.)

TOTAL	110618	100.0	TOTAL	11650	100.0
	MEAN BAC .169			MEAN BAC .099	

*Beginning with this report, the source of BAC data is the APS reporting form for convicted DUI offenders, rather than the abstract of conviction for those offenders, which was the data source in prior reports. This change in data source was made because of the more complete BAC reporting on APS forms (70% of total) versus court abstracts (with only 52% showing BAC levels).

TABLE 10: 1993 DUI CONVICTIONS BY OFFENDER STATUS AND AVERAGE REPORTED BAC LEVEL*

DUI OFFENDER STATUS	PERCENT	AVERAGE BAC LEVEL FROM APS REPORTING FORM (%)	AVERAGE BAC LEVEL FROM CONVICTION ABSTRACT (%)
STATEWIDE	100.0	.169	.166
1ST DUI	67.8	.164	.162
2ND DUI	21.6	.176	.174
3RD DUI	7.4	.182	.179
4TH+ DUI	3.2	.187	.182

*The differences in reported BAC levels between the two sources appear to be attributable to underreporting of high BAC levels on abstracts of conviction. The higher BAC levels from the APS reporting forms do not necessarily reflect increasing BAC levels among DUI offenders compared to last year's report, but rather reflect a more accurate reporting of BAC levels.

SECTION 3: POSTCONVICTION SANCTIONS

Data on court sanctions assigned to convicted DUI offenders were taken from DUI abstracts of conviction for offenders arrested in 1993. Also included are counts of postconviction DMV license actions for selected offender groups, while total counts of all license actions, including Administrative Per Se (APS) license suspensions and revocations, are shown in the Administrative Actions Section. APS actions (effective July 1990) are initiated by law enforcement immediately upon arrest for DUI, and are administered independent of the criminal adjudication process. This section includes the following tables:

Table 11: 1993 DUI Court Sanctions by DUI Offender Status. This table shows the frequency of specific court sanctions statewide by number of prior DUI convictions. The specific court sanctions tallied include percentages of probation, jail, alcohol treatment programs (first offender, SB 38 second offender, and 30-month third offender programs), license restriction, court suspension, and ignition interlock. Crosstabulations of sanctions by county, court, and number of prior convictions appear in Appendix Table B4.

Table 12: 1993 DUI Sanction Combinations by County - First Offenders. This table displays the frequency of commonly assigned court sanction combinations (such as first offender alcohol program plus license restriction) by county for first DUI offenders. License suspensions include both court and DMV postconviction (non-APS) suspensions. The sanction combination groups portrayed in this table, as well as Table 13, were defined according to the conventions described in the "Evaluation Methods and Results" portion of Section 4: "Postconviction Sanction Effectiveness."

Table 13: 1993 DUI Sanction Combinations by County - Repeat Offenders. This table shows the frequency of commonly assigned court sanction combinations by county for second, third, and fourth (or subsequent) DUI offenders. License actions include both court and DMV postconviction (non-APS) license suspensions and revocations.

From the data in these and the Appendix tables, it is evident that the use of alternative sanctions varied widely by county, court, and offender status in 1993. For example:

Statewide Parameters:

- The most frequently applied court sanction among all convicted DUI offenders was probation (95.6%), while the least frequently used court sanction was ignition interlock (1.8%). DUI offenders were sentenced to jail in 78.8% of the cases. (However, in many jurisdictions, jail is often served as community service rather than actual jail time.)

Figure 6 (below) graphically displays the statewide data from Table 11 showing the frequency of specific types of court-ordered sanctions among all convicted DUI offenders. Because virtually all offenders receive more than one type of sanction, the cumulative percentage adds to more than 100%.

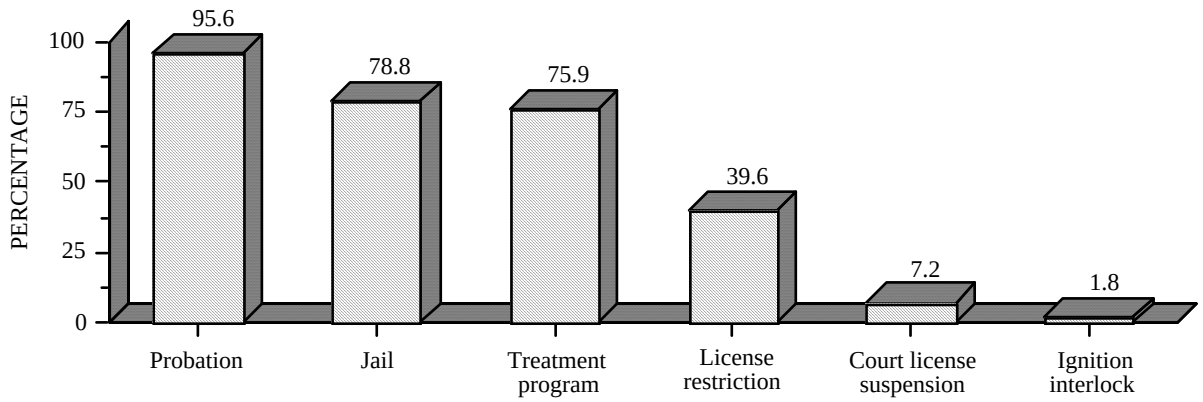

Figure 6 . Frequency of court-ordered DUI sanctions (1993).

County Variation:

- The proportion of first DUI offenders sentenced to jail varied by county from less than 10% in Alpine and Marin counties to 100% in Calaveras County.

- Counties such as Calaveras, Glenn, Lake, Lassen, San Luis Obispo, San Mateo, Sierra, and Stanislaus preferred to assign first offenders to treatment program and jail (over 85%) rather than treatment program and license restriction (less than 5%). Amador, Humboldt, Marin, and San Bernardino counties assigned treatment program and jail to less than 1% of their first offenders. Alpine, Humboldt, Inyo, and Marin counties assigned treatment program and license restriction to over 80% of first offenders.

- Counties departing from using typical first offender sanction combinations were Riverside, San Bernardino, and Imperial, as shown by relatively high percentages (over 10%) in the "other" category. ("Other" includes license restriction without treatment program assignment, probation only, and other unofficial sanction combinations.)

Court Variation:

- In Los Angeles County, two municipal courts (Lancaster and Burbank) used jail as a sanction in more than 95% of their DUI sentences. At the other extreme, three courts (Santa Monica, Malibu, and Calabasas) used jail as a sanction in less than 30% of their DUI sentences.

Variation by Offender Status:

- 71% of 1993 first DUI offenders were sentenced to jail, compared to 95% of all repeat offenders.

- 83% of first DUI offenders were assigned to alcohol treatment programs, along with 76% of second offenders, 36% of third offenders, and 17% of fourth or more DUI offenders. (All repeat offenders, however, must eventually complete specified alcohol treatment programs in order to be eligible for license reinstatement.)

- 10% of first DUI offenders and 28% of second DUI offenders received DMV or court license suspensions after adjudication. As of July 1990, of course, all DUI offenders with BAC levels of 0.08% or more were also subject to 30 days to one-year administrative license suspension/revocation under the APS law.

- Only 5% of repeat DUI offenders were assigned ignition interlock in 1993, in spite of the mandatory interlock law for repeat offenders (AB 2851 - Freidman), which took effect on July 1, 1993.

TABLE 11: 1993 DUI COURT SANCTIONS BY DUI OFFENDER STATUS*

DUI OFFENDER STATUS	TOTAL	PROBATION	JAIL	1ST OFFENDER ALCOHOL PROGRAM	SB 38 ALCOHOL PROGRAM	30-MONTH PROGRAM	LICENSE RESTRICTION	COURT SUSPENSION	IGNITION INTERLOCK
		%	%	%	%	%	%	%	%

3RD DUI	11903	91.0	94.7	4.2	30.0	1.3	16.6	18.4	3.9
4TH+ DUI	5264	61.4	95.7	2.7	14.0	0.4	4.7	11.8	1.4

*Entries represent percentages of 1993 DUI convictees receiving each sanction by offender status. Sanctions within each offender status group (row) are not independent; therefore, row percentages always add to more than 100%. Percentages of sanctions by county and court appear in Appendix Table B4.

SECTION 4: POSTCONVICTION SANCTION EFFECTIVENESS

This section presents and describes the results of an evaluation assessing the effectiveness of court and administrative sanctions applied to first and second DUI offenders[i]. The effectiveness of alternative sanctions is evaluated in terms of postconviction driving record as measured by: 1) total accidents and 2) DUI incidents, including alcohol-involved accidents, major convictions (primarily DUI, also reckless driving and hit-and-run), APS (0.08% BAC or chemical test refusal) suspensions and DUI failure-to-appear notices (FTA). Displayed below in Figures 7-15 are failure proportions from the sanction analyses for 1989, 1991, and 1993 first and second offenders (grouped by sanction assignment) with follow-up time periods of 5-years, 3-years, and 1-year, respectively. (The 1990 and 1992 offenders were not included in this year's report in order to simplify the analyses and reporting of results.) These figures show the proportion of accident- or DUI incident-involved drivers following their conviction. They are followed by a narrative description of the evaluation design, subject selection, data collection, analytical procedures, and evaluation results. The reader is cautioned that license suspension refers to postconviction suspensions only, and does not include preconviction administrative per se license suspensions (which are applied to all offender groups).

Based on the data represented in Figures 7-12, the following conclusions can be drawn about first offender sanctions:

- The 1989 and 1993 suspended first offender groups had significantly fewer accident-involved drivers than did any other first offender sanction group. The suspended group in both years had 18% fewer accidents than the groups with the next lowest accident rates--program with jail (1989) and program with restriction (1993). The accident rate of the 1991 suspended group was significantly lower than only two groups, the jail-only and program with restriction groups, with the suspended group having 14% and 8.3% fewer accidents, respectively.

[i]Third or more offenders were not included because a previous study (Tashima & Marelich, 1989) indicated serious confounding due to group differences on prior interventions. In addition, sanctions for third and subsequent offenders do not vary much, due to the statutorily prescribed sanction requirements.

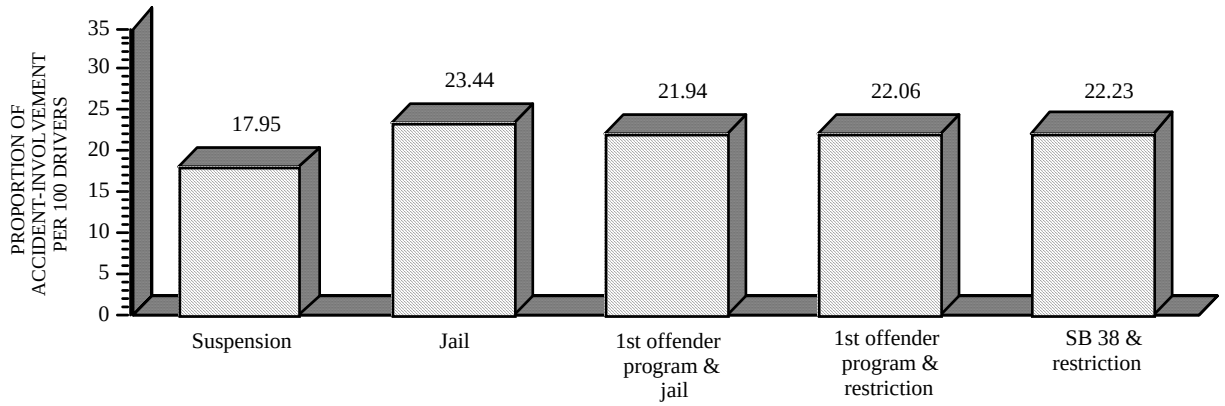

Figure 7. Adjusted 5-year accident rates of 1989 first offenders by type of sanction.

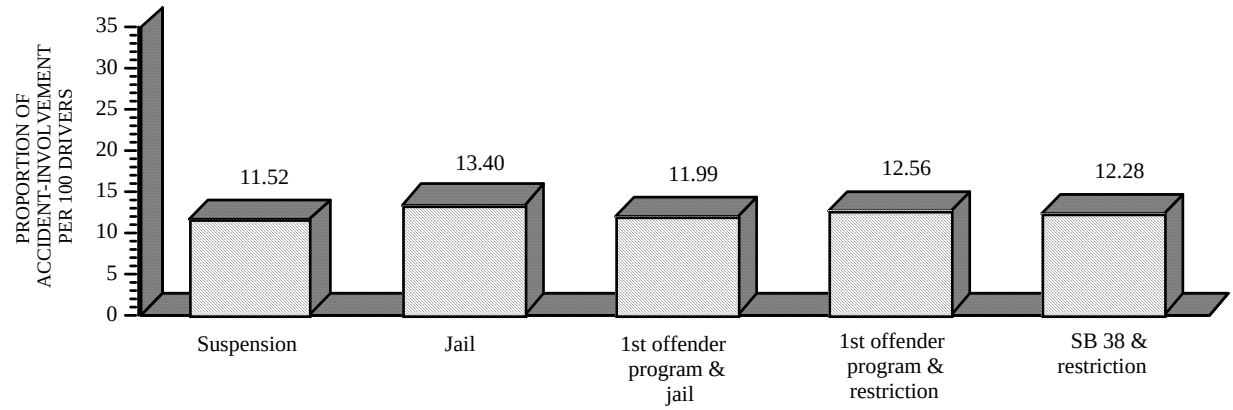

Figure 8. Adjusted 3-year accident rates of 1991 first offenders by type of sanction.

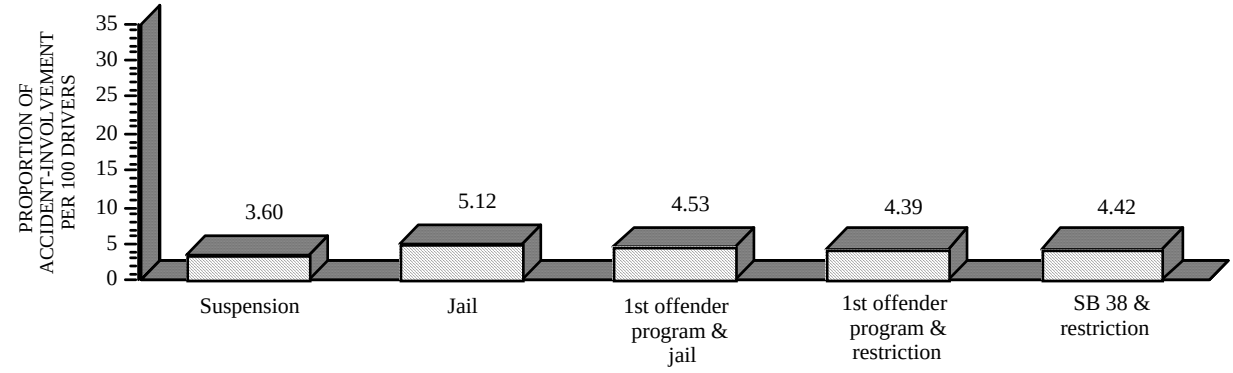

Figure 9. Adjusted 1-year accident rates of 1993 first offenders by type of sanction.

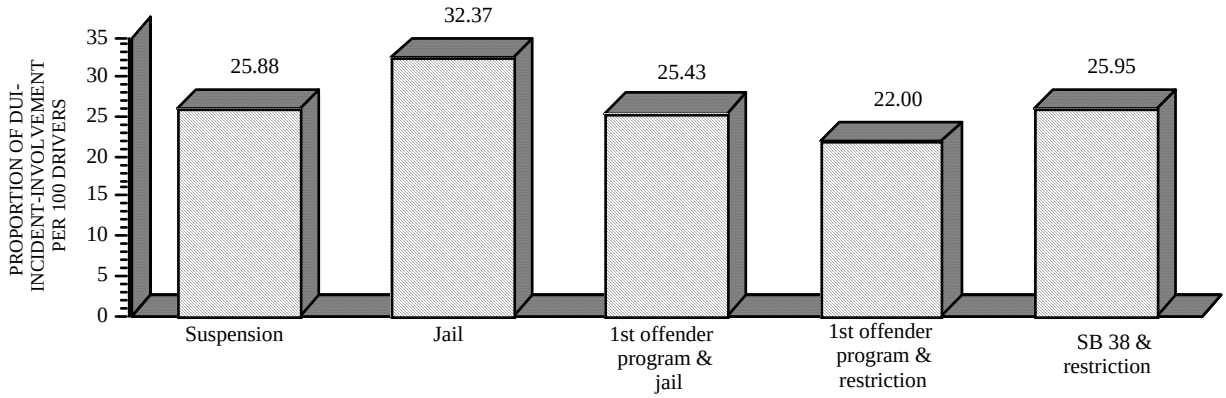

Figure 10 . Adjusted 5-year DUI incident* rates of 1989 first offenders by type of sanction (*alcohol-related accident or violation).

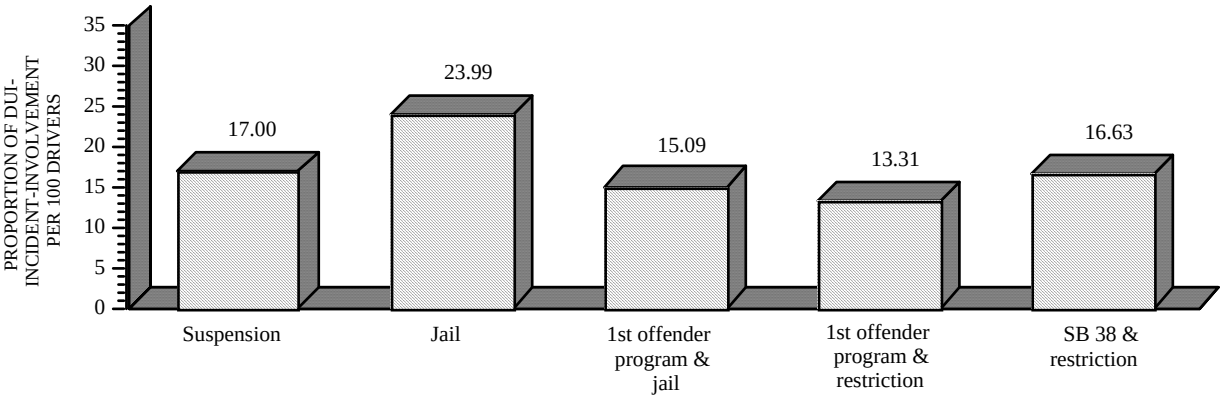

Figure 11 . Adjusted 3-year DUI incident* rates of 1991 first offenders by type of sanction (*alcohol-related accident or violation).

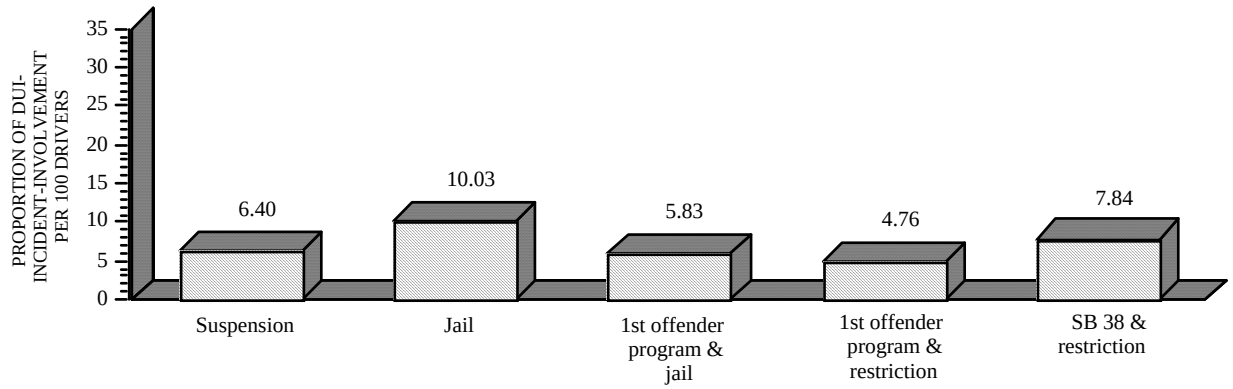

Figure 12 . Adjusted 1-year DUI incident* rates of 1993 first offenders by type of sanction (*alcohol-relatedc accident or violation).

- First offenders assigned to first offender treatment programs plus license restriction in 1989, 1991, and 1993 had significantly fewer DUI incidents in the postconviction period than did any other first offender sanction group. This group had 13.5%, 11.8%, and 18.4% fewer DUI incidents, respectively, in 1989, 1991, and 1993 than the group with the next lowest DUI incident rate (program with jail).

- In all three years, first offenders sentenced to jail without treatment or postconviction suspension had a significantly greater proportion (at least 24.7% higher) of DUI incident-involved drivers in the postconviction period than any other first offender sanction group.

Based on the data represented in Figures 13-15, the following conclusions can be drawn about second offender sanctions:

- The 1989 and the 1991 suspended second offender groups had 17.1% and 14.3% fewer accident-involved drivers than did the SB 38 program groups over their respective (5-year, 3-year) postconviction periods.

- Contrary to prior California studies including the first annual DUI-MIS report (1989 offenders), second offenders suspended in 1993 do not have significantly lower total accident rates than do those assigned to SB 38 treatment programs during the first year following suspension or SB 38 assignment. This change is likely due to the implementation of Administrative Per Se License Suspensions (APS) beginning in July, 1990, whereby all second offenders are suspended for one-year.

- Although license suspension and SB 38 treatment programs with APS suspensions are equally effective in their short-term impact on accidents (post 1-year), license suspension is more effective over a longer time window (3 - 5 years).

- In 1989, 1991, and 1993, second offenders who were suspended had a significantly higher proportion of DUI incident-involved drivers in the subsequent 1-year period than did those who received the SB 38 and license restriction sanction. The respective percentage increases associated with license suspension for the three years (1989, 1991 & 1993) were 20.9%, 31.1%, and 58.3%.

- The addition of ignition interlock to the SB 38 program plus restriction sanction combination for second offenders led to directionally but nonsignificantly lower 1-year subsequent accident and DUI incident rates.

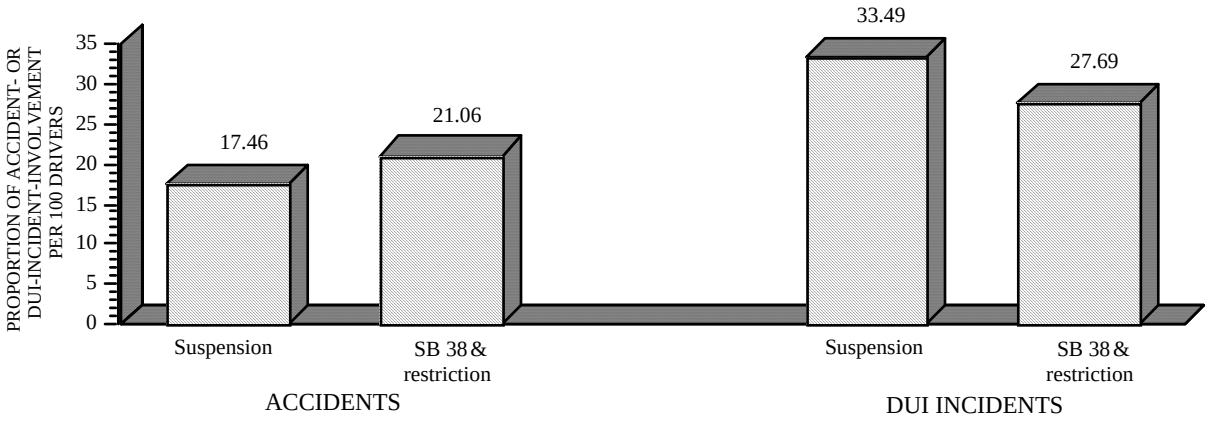

Figure 13 . Adjusted 5-year accident and DUI incident rates for 1989 second offenders by type of sanction.

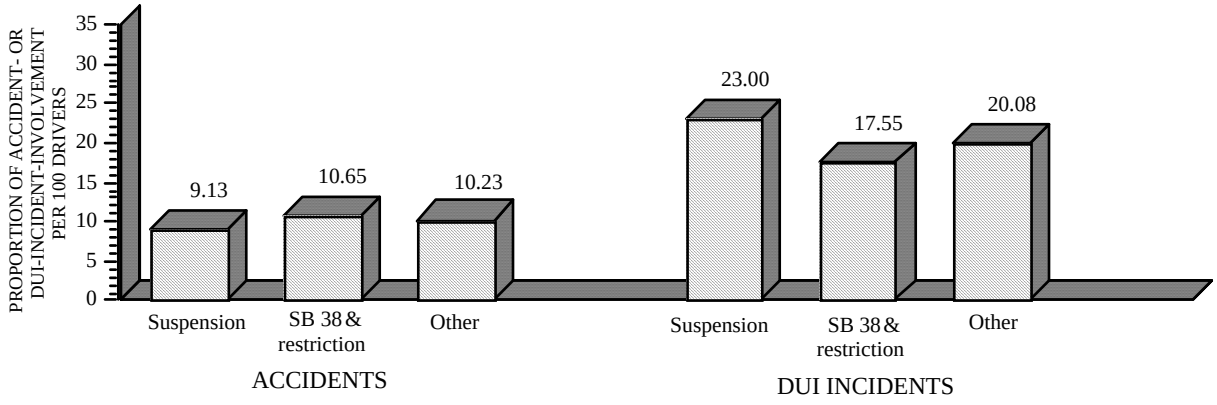

Figure 14 . Adjusted 3-year accident and DUI incident rates for 1991 second offenders by type of sanction.

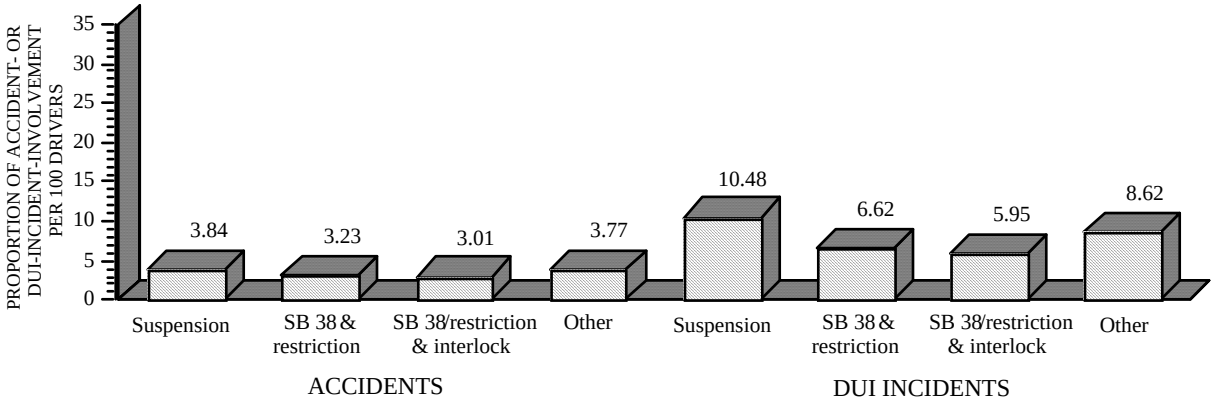

Figure 15 . Adjusted 1-year accident and DUI incident rates for 1993 second offenders by type of sanction.

EVALUATION METHODS AND RESULTS

Subject Selection and Data Collection

Convicted DUI offenders were identified from monthly abstract update tapes which contain all DUI conviction data reported to DMV by the courts. In the present study, follow-up data from three sets of offenders were evaluated for sanction effectiveness:

1) A 5-year follow-up period for the convicted 1989 DUI offenders who were evaluated in the first DUI-MIS report.

2) A 3-year follow-up period for convicted 1991 offenders who were evaluated in last year's DUI-MIS report.

3) A 1-year follow-up period for convicted DUI offenders who were arrested for DUI in 1993.

For each year's annual DUI-MIS report, an additional year of DUI data is added to the sanction analyses. In order to simplify the analyses and reporting of results, the 1990 and 1992 DUI offenders were not included in this year's evaluation.

The conviction date in all cases was considered to be the "treatment date" for defining prior and subsequent driving record data, because the penalties and sanctions for the DUI conviction are typically effective as of that date.

Since DUI penalties and sanctions are enhanced as a function of the number of prior DUI and alcohol-related reckless driving convictions within the previous seven years, subjects were selected based on the number of such convictions within the seven years prior to their entry DUI arrest. For the 1989, 1991, and 1993 drivers, two groups were selected for this evaluation: 1) first DUI offenders––drivers who had no DUI or alcohol-related reckless driving convictions within the previous seven years, and 2) second DUI offenders––drivers who had one DUI or alcohol-related reckless driving conviction within the previous seven years.

Court sanctions are reported to and recorded by DMV in the form of disposition codes on the abstract of conviction. A convicted DUI offender, especially a first offender, might receive any one of many combinations of individual sanctions, including jail, fine, license restriction or suspension, alcohol treatment program, or probation. Therefore, in

defining sanction combination groups for the purpose of this analysis, the following conventions were used for first offenders:

1) if suspension (non-APS) was one of the sanctions imposed by DMV or the court, then the offender was included in the suspension group;

2) if suspension (non-APS) was not imposed, but the offender was assigned to an alcohol treatment program, then the offender was included in one of the treatment groups, according to the type of treatment program (first offender or SB 38) and whether they were also sentenced to license restriction or jail; and

3) if neither suspension nor treatment was imposed, but the offender was sentenced to jail, then the offender was included in the jail-only group.

Fine and probation are generally imposed on most DUI offenders (except that probation is not usually granted to court-suspended first offenders), and for that reason are not included as sanctions evaluated in this report. Also, since July, 1990, all DUI offenders have had their licenses administratively suspended upon DUI arrest.

It should be noted that the definition of the sanction combination groups was not an arbitrary analytical convention, but rather a reflection of the most common naturally occurring sanction combinations assigned by the courts. Based on the above taxonomy, five first-offender sanction combination groups are used in this analysis: 1) license suspension, 2) jail, 3) first offender treatment program plus jail, 4) first offender treatment program plus license restriction, and 5) SB 38 (second offender) treatment program plus license restriction (some courts assign this sanction to a small number of first offenders).

One limitation of the above hierarchical grouping scheme is that it does not allow for an evaluation of the independent and interactive effects of each sanction as a treatment factor. Taking first offender treatment program plus jail as an example, the approach we used does not allow analysis of the separate effects of jail from the effects of the treatment program.

A similar convention was used for grouping second offenders with various sanction combinations; the groups used in this analysis are: 1) license suspension, 2) SB 38 treatment program plus license restriction, 3) a group of 1991 and 1993 second

offenders ("other") who did not meet the selection criteria of groups 1 or 2, and 4) a fourth group of 1993 second offenders who were ordered to install an ignition interlock device in their vehicles as mandated by AB 2851 (effective July, 1993). This device requires that the offender blow into it prior to starting the vehicle, which will not start if he/she has a BAC of 0.02% or greater. This group was identified by certain vehicle code designations on their abstract of conviction. In examining these abstract disposition codes, it was found that 85% of interlock cases were also referred to SB 38 treatment programs (along with license restrictions), while 27% had their license suspended (non-APS). In order to minimize the confounding of sanctions in this group, only offenders assigned to both the ignition interlock and SB 38 treatment program plus restriction requirements were included in this year's analysis. Although it would be informative to have been able to include the group with both license suspension and ignition interlock, the number of cases was too small to produce statistically reliable estimates. It may be possible to include this group in next year's analysis, when a larger number of these cases will be available.

Most of the offenders in the group designated as "other" were originally referred to an SB 38 treatment program, but were suspended as well, either by intent (court sentence to both treatment program and suspension), or neglect (court misreporting of disposition codes and/or the offender's lack of compliance with required procedures, such as failure to provide proof of insurance, program enrollment, pay fees, etc.). Even if the courts amend the mistaken abstracts of conviction, the offenders still need to meet the insurance and program enrollment requirements. The final sanctions ultimately received by this group are unclear, which makes interpretation difficult. The "other" group was not included in the first DUI-MIS 1989 analysis and, therefore, was not included in subsequent reanalyses of the 1989 arrestees.

DUI offenders with felony convictions, chemical test refusal suspensions, 'X' license numbers (assigned if no California driver license number can be found), out-of-state ZIP Codes, and irregular or unofficial sanction codes (among first offenders) were excluded from the sanction analyses.

Prior driver record data were extracted for the two years (1.75 years for the 1993 cases) preceding an offender's DUI conviction date for all offenders. Appendix Tables B5, B6, and B7 list these prior driver record variables, which were used as covariates in the analyses. The evaluation period for the postconviction driving measures, starting from the conviction date, was five years for the 1989 drivers, three years for the 1991 drivers,

and one year for the 1993 drivers. A buffer period of six months was allowed between the end of the evaluation period and the data extraction date to allow for processing and reporting the most recent data to DMV. DUI offenders who had less than the full follow-up time period (from conviction date to the buffer period) were excluded. The outcome driving record measures consisted of the proportion of offenders who were involved in: 1) total accidents and 2) DUI incidents (alcohol-involved accidents, major convictions, APS/refusal suspensions, or DUI failures to appear).

Evaluation Design and Analytical Procedures

Logistic regression analysis was used to evaluate the differences in the proportion of accident- and DUI-incident-involved drivers in each sanction group at the end of the evaluation period. Only the first accident or DUI incident or "failure" was evaluated. This is not an important limitation with these data because the incidence of repeat failures (two or more accidents or DUI incidents) was low over the study time window. More importantly, analysis of repeat failures would be subject to confounding by court sanctions received in connection with the first failure incident. This type of confounding is avoided because multiple incidents were not included in this analysis.

Since it was not possible to randomly assign drivers to the various sanction groups, potential biases due to preexisting group differences were statistically controlled by entering into the analyses as covariates biographical data, prior driving record data and ZIP code indices (accident and traffic conviction averages of each driver's ZIP code area, and selected ZIP code variables from the 1990 census data for the 1991 and 1993 drivers). (Tables B5, B6, and B7 show significant group differences on most of these variables.) While this "quasi-experimental" design is subject to a number of limitations in assessing cause-effect relationships, the statistical control of group differences removes at least part of the bias in group assignment and provides a more precise estimate of the relationship between type of sanction and subsequent record. It is likely, of course, that the groups also differ on characteristics not measured by, or reflected in, the covariates. The possibility of uncontrolled biases becomes particularly problematic if sanctions are commonly received by atypical offenders through self- or judicial-selectivity (e.g., drivers of higher socio-economic status might be more likely to receive program with restriction than those of lower status).

In all of the analyses for accidents (except 1989 and 1991 second offenders) and DUI incidents for both first and second offenders in all three years, several significant ($p<.01$) covariate by sanction interactions were evident (statistical significance at $p<$x means

that a differential effect between groups would occur by chance less than x% of the time). These significant interactions indicated that the relationship between the covariates and the outcome measure varied across sanction groups, and therefore the covariates were included in the initial analyses for all three data sets to determine the magnitude of the interactions. In all analyses, except three (1989, 1991, and 1993 first offender accidents) where sanction differences were significant (p<.03), the interaction effect was generally one-fourth or less that of the main effect of sanction (chi squares were divided by their respective degrees of freedom to provide an approximate measure of effect size). Since the sanction main effect had substantially greater magnitude than the interaction effects, conclusions about sanction differences were based on analyses that did not include the interactions. The interaction effects of the remaining three analyses were examined and found not to create a serious impact on the sanction main effect. However, interaction effects from the only analysis in which sanction differences were not significant (1993 second offenders) are discussed below because sanction effects on accident rates vary across different levels of prior accidents and prior minor convictions.

Results of the First Offender Sanction Evaluation

Total Accidents: Figures 7, 8, and 9, and Table 14 display the results of the logistic regression analysis of total accidents for 1989, 1991, and 1993 first offenders. Among the 1989 and 1993 first offenders, the suspended group continued to have the significantly lowest proportion of accident-involved drivers relative to the other sanction groups, with 17.95 (1989) and 3.60 (1993) accident involvements per 100 drivers (see Table 16 for a summary of significant results by sanction groups). The suspended group in both years had 18% fewer accidents than the next lowest group's rates––program with jail (1989) and program with restriction (1993). Although the 1991 suspended group had the lowest proportion of accident-involved drivers, it was significantly lower than that of only two groups, the jail-only and program/restriction groups (by 14% and 8.3%, respectively) . First offenders sentenced to jail-only had a significantly higher accident rate than that of the suspended group for all three years, and were significantly higher than the program/jail group in 1989 and 1991 and the program/restriction group in 1989 and 1993. (It should be noted that the jail-only sanction may actually be a less aversive punishment than other sanctions when community service is substituted for jail time, which is frequently the case.)

In this year's analysis of first offenders, there is a fairly strong main effect of sanction differences on accidents, as discussed above. However, there was also an interaction

effect between sanction and the covariate, Zip code arrival time to work, indicating that in some geographical areas where travel time to work is long, the program/restriction group showed a noticeable rise in its accident rate. However, the other groups generally showed a flat accident rate across all travel times. The pairwise comparisons of the failure rates of the other three groups generally did not show significant differences between them in all three years. Based on the above results, suspension continues to show the strongest effect among first offenders in reducing total accidents, regardless of the length of time in the evaluation period, while jail was generally the least effective sanction (relative to two or three groups) across all time periods.

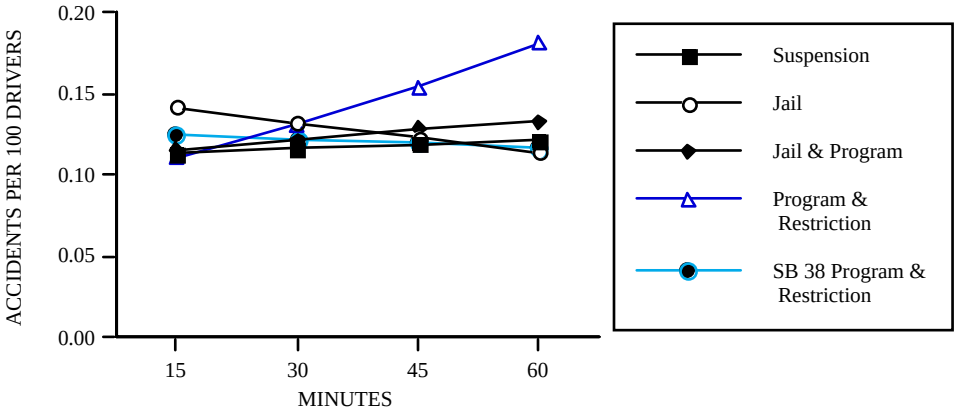

Figure 16A . Adjusted 3-year accident rates for 1991 first offenders by type of sanction and ZIP code average arrival time to work.

DUI Incidents: Figures 10, 11, and 12 and Tables 14 and 16 show that among the first offender groups in 1989, 1991, and 1993, the (statistically significant) lowest proportions of reoffending drivers were in the groups assigned to first-offender treatment program plus license restriction, with failure rates of 22.0, 13.31, and 4.76 per 100 drivers, respectively. This group had 13.5%, 11.8%, and 18.4% fewer DUI incidents, respectively, in 1989, 1991, and 1993 than the group with the next lowest recidivism rate (program with jail). In contrast, the highest recidivism rates occurred with the jail-only groups for all years (32.37, 23.99, and 10.03 for 1989, 1991, and 1993, respectively). Differences in failure proportions among the other three sanction groups were again not significant for the 1989 offenders, but were significantly different among the three groups in 1991 and 1993. The first offender treatment program with jail group in 1991 and 1993 had lower recidivism rates than that of the SB 38 group, and lower rates than that of the 1991 suspended group. Overall, participation in the first-offender treatment

program with license restriction continues to rank first in its effect on DUI incidents, while the jail-only sanction continues to have the least impact.

Results from the first offender sanction analyses on DUI incidents continue to replicate those from previous research studies for all three analyses. Sanction group differences on accidents in this year's analyses continued to be consistent for 1989 and 1993. Among the 1991 first offenders, the suspended group still had the lowest accident rate and was significantly lower than the jail-only and program/restriction groups.

TABLE 14: FIRST OFFENDER SANCTION EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF ACCIDENT-INVOLVED, PER 100 DRIVERS	NUMBER OF DUI-INCIDENT-INVOLVED, PER 100 DRIVERS
1989	Suspension	(5,638)	17.95	25.88
(follow-up period = 5 years)	Jail	(7,200)	23.44	32.37
	1st DUI program & jail	(43,631)	21.94	25.43
	1st DUI program & license restriction	(41,228)	22.06	22.00
	SB 38 program & license restriction	(4,423)	22.23	25.95
1991	Suspension	(10,461)	11.52	17.00
(follow-up period = 3 years)	Jail	(5,164)	13.40	23.99
	1st DUI program & jail	(58,893)	11.99	15.09
	1st DUI program & license restriction	(38,147)	12.56	13.31
	SB 38 program & license restriction	(6,419)	12.28	16.63
1993	Suspension	(6,118)	3.60	6.40
(follow-up period = 1 year)	Jail	(4,469)	5.12	10.03
	1st DUI program & jail	(42,403)	4.53	5.83
	1st DUI program & license restriction	(29,567)	4.39	4.76
	SB 38 program & license restriction	(3,496)	4.42	7.84

Results of the Second Offender Sanction Evaluation

Total Accidents: Among 1989 and 1991 second offenders, license suspension continued to be significantly more effective than treatment program plus restriction in reducing total accident risk (see Figures 13, 14, and 15, Tables 15 and 16), five years and three years subsequent to their convictions, respectively. The 1989 and 1991 suspended groups, with failure rates (per 100 drivers) of 17.46 and 9.13, respectively, had 17.1% and 14.3% fewer accident-involved drivers than did the SB 38 program groups. This finding is consistent with those of prior studies of second offenders on total accidents.

Results of the 1993 analyses were similar to those of the 1990, 1991, and 1992 one-year analyses (reported in the previous three DUI-MIS evaluations) in that significant differences were not evident (although directionally significant at p = .12) among second offenders in their total accident rates. It was noted in last year's report that since license suspension has been consistently effective in reducing accident risk, it was likely that the lack of significant group differences in the one-year period was due to the immediate short-term positive effect of the imposition of one-year APS license suspensions on all second offenders. It was found in the previous three analyses that the accident rate of the SB 38/restriction group had declined toward the level of the suspended group; in this year's analysis, the SB 38 participants show even lower accident rates than the suspended group. Since the one-year follow-up period covers the time window when all second offenders are under APS suspension, it was reasoned that APS suspension would be expected to have a larger effect on the accident rates of previously nonsuspended SB 38 participants than it did on those who were suspended upon conviction.

In contrast to the previous evaluations of one-year second-offender accidents, this year's analysis revealed the presence of significant interaction effects which may partially explain the nonsignificance of the sanction main effect. The interaction effects indicated that sanction effects on accident rates varied at different levels of prior 2-year minor convictions and prior 2-year accidents; consequently, these interactions were investigated to determine the magnitude of their effect. Figure 16B portrays the configurations of the accident rates varying by prior 2-year minor convictions and accidents across sanction groups. It can be seen that as the number of prior events increases, the accident rates of the SB 38 participants and the "other" group rise at a higher rate than those of the interlock or suspended group, suggesting that the effectiveness of these sanctions diminishes as prior accidents and minor convictions increase. It is also possible that omitted variables that contribute to group nonequivalancy, and their potential interactions with sanctions and other covariates, may be influencing or underlying these interaction effects.

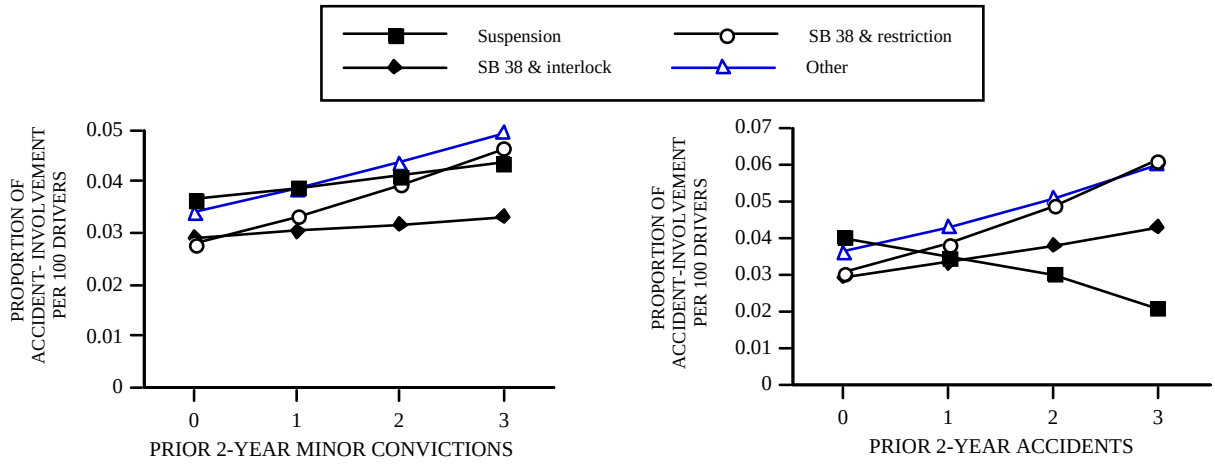

Figure 16B . Adjusted 1-year accident rates for 1993 second offenders by type of sanction and prior 2-year minor convictions and accidents.

In both plots, the accident rate of the ignition interlock group is noticeably lower initially and rises at a slower rate than the other sanction groups (except for the suspended group on prior accidents). However, the conclusiveness of this finding may be undermined by the fact that this year's interlock group is quite small (*N* = 1288) compared to the number of cases in the other groups (see Table 15). In addition, the likely presence of self-selectivity and uncontrolled group biases due to lack of random assignment may be influencing these results. The better prior driving record of the interlock group (see Appendix Table B6) suggests the possibility that this group's driving behavior may be better than that of the other groups even before sanctions were applied. Statistical control of nonequivalent groups only partially removes group bias. Nevertheless, the possibility that the interlock device itself could deter the incidence of drinking and driving for a broader range of prior record categories cannot be rejected. Next year's analysis of a larger interlock group(s) may provide more information on these findings.

The results are somewhat more ambiguous for the suspended group because its accident rate declines markedly as prior accidents increase but, conversely, its accident rate rises with an increase in prior minor convictions. These configurations depart noticeably from previous explorations of differential sanction effects across prior minor convictions and prior accidents in that the accident rate of the suspended group usually increased at a much slower rate than that of other sanction groups as prior incidents increased. Also, the direction of the accident rates of the suspended group were similar for both covariates in previous studies. The reason for this change cannot be inferred from these results nor is it clear why the relative effects of the sanctions should be moderated in different ways by the number of prior convictions and accidents. As

noted above, one possibility is the existence of uncontrolled variables which are affecting the composition and comparability of the various subgroups.

In comparing accident rates between first and second offenders, Tables 14 and 15 show that across all years, first offenders continue to show higher accident rates than second offenders, which is a finding that has been apparent in previous DUI studies on accidents, even prior to DUI-MIS evaluations. Last year's analysis revealed significant differences between first and second offenders on 2-year subsequent accidents. As noted in last year's report, the fact that second offenders have longer term sanctions than do first offenders (18-month postconviction suspension or 18-month SB 38 treatment programs) may explain this difference.

DUI Incidents: Figures 13, 14, and 15 and Tables 15 and 16 show that in all three years, the suspended groups had significantly higher failure rates (by 20.9%, 31.1%, and 58.3% for 1989, 1991, and 1993, respectively) than corresponding rates for the SB 38 program participants. The third group ("other") in the 1991 and 1993 analyses had failure rates midway between the other two groups. Failure rates of all three groups in 1991 were significantly different from each other. In the 1993 analysis, recidivism rates were significantly different between all groups except between the SB 38 program participants and the SB 38 program plus ignition interlock group. Next year's analyses, when a larger number of offenders are evaluated, should be more informative on the relative effectiveness of the ignition interlock device in combination with suspension and/or SB 38 treatment program.

TABLE 15: SECOND OFFENDER SANCTION EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF ACCIDENT-INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1 - GRP 2}}{\text{GRP 2}} \times 100$	NUMBER OF DUI INCIDENT-INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1 - GRP 2}}{\text{GRP 2}} \times 100$
1989	1) Suspension	(9,483)	17.46		33.49	
(follow-up period = 5 years)	2) SB 38 program & license restriction	(23,929)	21.06	-17.1%	27.69	20.9%
1991	1) Suspension	(11,192)	9.13		23.00	
(follow-up period = 3 years)	2) SB 38 program & license restriction	(19,309)	10.65	-14.3%	17.55	31.1%

Note: A significant (p<.03 for 1st offenders and p<.06 for 2nd offenders) difference between sanction groups relative to the proportion of accident-involved or DUI-incident-involved drivers is represented by an "S". The group number with the 'S' indicates the group with the better (lower) rate. A nonsignificant difference is indicated by "ns", and "na" means not applicable. Blanks appear in the lower half of each matrix, since the halves are identical.

Overall, findings for the 1989 and 1991 second offenders on accidents replicate previous evaluations indicating that postconviction license suspension continues to be more effective than SB 38 treatment program plus restriction in reducing accidents over 5- and 3-year follow-up periods. Findings from the 1993 second offender analyses were

similar to previous post-APS one-year evaluations of second offenders in showing no evidence of significant difference between the sanction groups on subsequent accident rates; however, with the addition of a fourth sanction group in this year's analysis (SB 38 treatment program plus ignition interlock), the presence of interaction effects between sanctions and two covariates complicates the interpretation of the sanction main effects. However, the fact that the 1-year accident rates for both the SB 38 treatment program participants and the interlock group were lower than that of the suspended group could be attributed to the short-term impact of APS suspensions.

The results on reoffense rates for second offenders continue to be consistent with the findings of prior studies on alcohol-related incidents, indicating that SB 38 programs with license restriction are associated with a reduction in subsequent DUI incidents over all three follow-up periods.

SECTION 5: ADMINISTRATIVE ACTIONS

Data on DMV administrative license disqualification actions (license suspension or revocation--S/R) taken in DUI cases are presented below. These statutorily mandated actions are initiated by the receipt of either a law enforcement APS report (.08% BAC or chemical test refusal) or court abstract of conviction. It should be noted that multiple actions can result from a single DUI incident--for example, a single DUI arrest frequently will result in both an APS suspension and a mandatory postconviction suspension action. This section includes the following tables and figure:

Table 17: Mandatory DUI License Disqualification Actions, 1984-1994. This table shows preconviction (APS) and postconviction license disqualification totals from 1984 through 1994. The postconviction totals include juvenile suspensions, first-offender suspensions, second-offender suspensions and revocations, and third- and fourth-offender revocations.

Table 18: Administrative Per Se Process Measures. This table presents APS process measure data for fiscal years 92/93 through 94/95.

Figure 17 graphically portrays mandatory DUI license disqualification totals from 1984 through 1994.

The following statements are based on the data shown in Tables 17-18 and Figure 17.

- During 1991, the first full calendar year of administrative per se license suspension, the total number of DMV DUI suspension/revocation actions increased by 60% over 1990. In 1992, the number of APS actions and total mandatory actions declined by 16% and 17%, respectively, mirroring the 16% decline in DUI arrests during the same period. This decline continued in 1993 and 1994, with DUI arrests as well as mandatory license disqualification actions decreasing by over 10% each year.

- In 1994, 184,045 administrative per se license actions were taken. Of these actions, 66% were first-offender actions and 34% were repeat-offender actions.

- Chemical test refusal actions have steadily continued to decline, and have decreased by 57% since 1984.

- The number of mandatory postconviction license actions decreased by 13% in 1994.

- Since APS was implemented in July 1990, over 1 million (1,178,002) APS suspension or revocation actions had been taken through June 1995.

- During the first five years of APS implementation, requests for hearings have increased each year, rising from 7% of all APS actions in FY 90/91 to 12% in 94/95. The rate at which APS suspension/revocation actions are upheld after hearing has declined from 87% in FY 90/91 to 80% in 94/95. During the same time period, the sustain rate for chemical test refusal hearings has fallen from 84% to only 72%. The underlying reasons for these trends are unclear at present.

- During the first 18 months after implementation (on January 1, 1994) of the "zero tolerance" law for minors, 14,283 suspension actions were taken.

Total .08 and .01 hearings scheduled[7]	24,497	21,682	21,774
.08 hearings held and/or completed	20,587	21,264*	18,300
.01 hearings held and/or completed	– – –	– – –	888
.08 actions sustained or upheld following a hearing	16,920	15,481*	14,657[8]
.01 actions sustained or upheld following a hearing	– – –	– – –	743[9]
.08 APS refusal hearings held and/or completed	2,712	2,260*	1,836
.08 APS refusal actions sustained or upheld following a hearing	2,220	1,758*	1,326[10]

*Figure represents the combined total .08 and .01 hearings for FY93/94.

[1]Action taken on the basis of a chemical test refusal or blood alcohol concentration (BAC) test result.

[2].08 refers to APS actions taken subsequent to obtaining evidence of a BAC equal to or in excess of the .08% per se level. Such an action is taken in conjunction with a DUI arrest.

[3].01 refers to APS suspensions taken against drivers under the age of 21 with BACs in excess of .01%.

[4]All entries in this category exclude actions later set aside but, where possible, include actions taken on the basis of either a chemical test refusal or a BAC test result.

[5]Prior DUI convictions consist of any such conviction where the violation occurred within the seven years prior to the current violation.

[6]Introduced 1/1/95 this restriction allows driving to, from, and during the course-of-employment.

[7]This figure excludes subsequent departmental review hearings or procedures. In FY93/94 10% of total APS actions resulted in a hearing and increased to 12% in FY94/95. both numerator and denominator include those actions set aside as a result of the hearing.

[8]In FY94/95 the .08 APS suspension or revocation was upheld in 80% of the total .08 APS hearings held.

[9]In FY94/95 the .01 APS suspension or revocation was upheld in 84% of the total .01 APS hearings held.

[10]In FY93/94 the action was sustained or upheld in 78% of the combined .08 and .01 APS chemical test refusal hearings held and in FY94/95, the action was sustained or upheld in 72% of .08 APS chemical test refusal hearings.

SECTION 6: ACCIDENTS INVOLVING ALCOHOL

This section presents data on alcohol-involved accidents, as compiled and reported by the California Highway Patrol, as well as accident data which have been crosstabulated with Department of Justice DUI arrest data. Drivers identified as being under the influence of drugs other than alcohol are also included in the "alcohol-involved accident" category, but typically comprise less than 1% of the total (0% for 1993 data). This section includes the following tables:

Table 19: Race/Ethnicity by Sobriety Code of Accident-Involved 1993 DUI Arrestees. This table shows the law enforcement officer determination of sobriety for accident-involved 1993 DUI arrestees, by race/ethnicity.

Table 20: Fatal and Injury Accidents of 1993 DUI Arrestees by Race/Ethnicity and Type of Arrest. This table portrays the fatal/injury accident involvement of DUI arrestees, by race/ethnicity and type of arrest (felony, juvenile, or misdemeanor).

Table 21: Adjudication Status by Sobriety Code for Accident-Involved 1993 DUI Arrestees. This table crosstabulates accident sobriety codes (from law enforcement accident reports) with the court disposition of the 1993 DUI arrests associated with those accidents.

Table 22: Fatal and Injury Accidents of 1993 DUI Arrestees by Type of Arrest and Adjudication Status. This table displays the adjudication status of fatal and injury accident-involved 1993 DUI arrestees, by type of arrest.

Table 23: 1993 Accident-Involved DUI Arrestees With No Record of Conviction, by County and Type of Arrest. This table shows the number of accident-involved 1993 DUI arrestees without a corresponding recorded conviction, by type of DUI arrest, by county.

Table 24: 1-, 3-, and 5-Year Total, Fatal/Injury, and Alcohol-Related Accident Means by Offender Status. This table shows the average number of total, fatal/injury, and alcohol-related accidents for 1993, 1991, and 1989 DUI arrestees for time periods of 1, 3, and 5 years subsequent to their arrests, respectively, by offender status (number of prior offenses).

Figure 18 (below) shows the annual percentages of traffic injuries and fatalities that were alcohol-involved from 1984 to 1994. The numerical data for this graph are shown on the DUI summary statistics sheet at the beginning of this report.

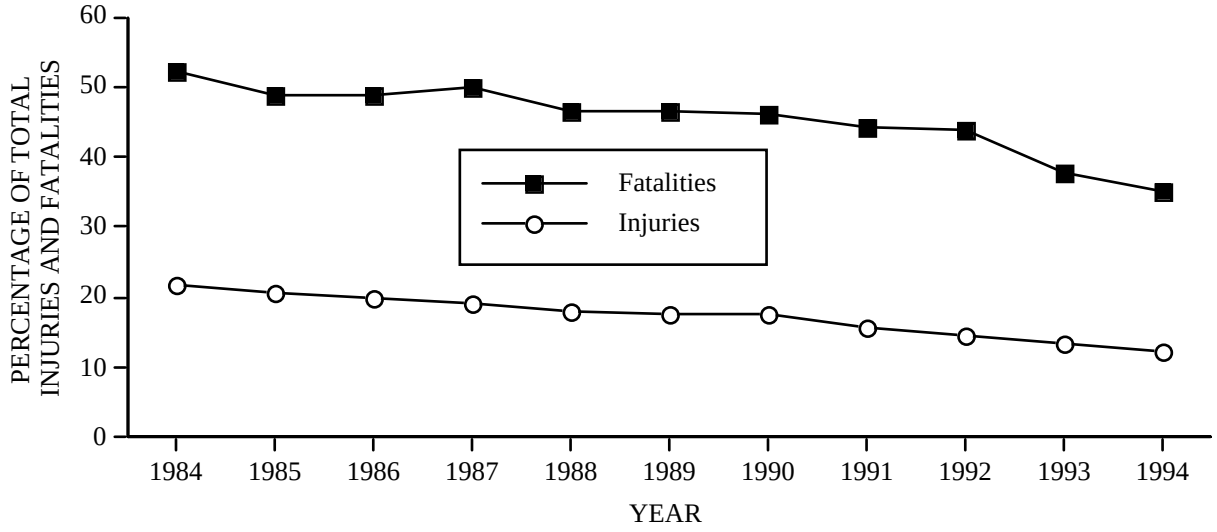

Figure 18 . Percentage of total injuries and total fatalities that were alcohol-involved, 1984-1994.

Based on these data, the following statements can be made:

- The number of alcohol-involved traffic fatalities decreased by 5.2% in 1994, and has declined by 46% since 1987. The proportion of fatalities which are alcohol-involved has declined from 50.1% in 1987 to 35.3% in 1994.

- The proportion of traffic accident injuries that are alcohol-involved has also declined each year since 1987. Alcohol-involved injuries dropped 8.1% during 1994 and 42.7% from 1987 to 1994.

- 13.1% of all 1993 DUI arrests were associated with a reported traffic accident, compared to 11.1% in 1992 and 1991. 49% of these accidents involved an injury or fatality.

- In 25% of cases where a DUI offender was arrested in connection with a reported traffic accident, there is no record of any corresponding conviction. In 91% of these

nonconvicted cases, the accident report indicated that the driver had been drinking and that their ability was impaired.

- Of all 1993 accident-involved DUI arrestees with no record of conviction, 18.5% had been arrested for felony DUI, down from 19.0% in 1992 and 19.4% in 1991.

- 6.4% (14,985) of 1993 DUI arrests were associated with a fatal or injury accident, up from 5.7% the previous year. Of these fatal/injury accidents, only 29% (4,376) led to an arrest for felony DUI, and less than 10% (1,475) led to a conviction of felony DUI. Almost 28% (4,154) of DUI arrests stemming from a fatal/injury accident did not result in a reported conviction.

- The fatal/injury and total accident risk of DUI offenders generally decreases with the number of prior DUI convictions for periods up to five years after arrest, while, conversely, the risk of involvement in an alcohol-related accident generally increases with number of priors over the same time periods.

DATA SOURCES AND LIMITATIONS

DUI Arrest Data:
Arrest data are reported to the Department of Justice (DOJ), Law Enforcement Information Center, by individual law enforcement agencies throughout the state. As such, these data are subject to reporting errors such as incorrect names, birthdates or arrest dates. Nonreporting of arrest data due to error or omission can also occur; for example, in 1989 and 1991 the San Bernardino Police Department reported no DUI arrests, while reporting hundreds of DUI arrests in 1988, 1990, 1992, 1993 and 1994. When data are entered into DOJ's Monthly Arrest and Citation Register (MACR) system, only the highest-order offense is included. Therefore, in cases where a DUI arrest is made in conjunction with, for example, an auto theft arrest, that DUI arrest will not be included in the database. This results in a slight but systematic underreporting of the number of DUI arrests annually.

DUI Conviction Data:
Abstracts of conviction for DUI and other traffic-related offenses are reported to the Department of Motor Vehicles (DMV) by courts throughout the state. As abstracts are received (either hard copy, magnetic tape or through direct electronic access from the courts) they are entered onto the DMV driver record database. Abstracts without an identifying driver license number are run through the automated name index (ANI) system in order to match the abstract with an existing driver record; in cases where no such match can be made, an "X" numbered record is created to store the abstract. The total number of DUI abstracts of conviction received by DMV from the courts is tallied monthly and annually. Since this workload total includes abstracts which amend, correct or dismiss prior abstracts of conviction, it tends to overestimate the actual number of convictions which have occurred. Conviction data are also subject to reporting and nonreporting errors similar to those for DUI arrests. For example, the 1993 Annual Report of the California DUI Management Information System documented that thousands of DUI convictions showing in court records do not appear on the DMV driver record database.

Alcohol-Involved Accident Data:
Accident data are reported to the California Highway Patrol (CHP) by local law enforcement agencies and district offices of the CHP. As such, these data are subject to reporting and nonreporting errors similar to those occurring in both DUI arrest and conviction data. While most local law enforcement agencies will investigate and file reports on accidents involving injury or death, the investigation and reporting of property-damage-only accidents varies widely by local jurisdiction. Data are entered onto CHP's Statewide Integrated Traffic Records System (SWITRS) and output in annual published reports.

GLOSSARY

ADMINISTRATIVE PER SE (APS)

Administrative per se ("on-the-spot") license suspension or revocation occurs immediately pursuant to lawful arrest of a person driving with a blood alcohol concentration (BAC) of 0.08% or more, or one who refuses a chemical test. Upon arrest, the driver's license is immediately confiscated by the law enforcement officer and an order of suspension or revocation served. The driver is issued a temporary license and allowed due process through administrative review. In July 1990,

California became the 28th state to implement APS. In January 1994, California enacted a "zero tolerance" statute which requires the administrative suspension of any driver under age 21 with a BAC of 0.01% or greater, or who refuses to be tested.

ALCOHOL-INVOLVED ACCIDENT

Alcohol-involved accidents are those in which the investigating law enforcement officer indicates on the accident report that the driver "had been drinking (HBD)." Accidents involving drivers who are determined to be under the influence of drugs other than alcohol (typically less than 1% of all accidents) are also included in the alcohol-involved accident category.

ALCOHOL-RELATED RECKLESS DRIVING

Commonly called a "wet" reckless, alcohol-related reckless driving refers to an arrest/conviction incident which originated as a DUI arrest. DUI arrests involving drugs which are reduced to reckless driving are also referred to as alcohol-involved or "wet" reckless driving. "Wet" reckless convictions count as priors for the purposes of enhanced penalties upon subsequent conviction of DUI.

ALPHA

Alpha is the investigator's acceptable risk or probability level of making a Type 1 error (generally chosen to be small--e.g., 1% or .01, 5% or .05). There is always some risk of a Type 1 error, so alpha cannot be zero. Alpha is also called the significance level, because it is the criterion for claiming statistical significance.

BAC

Blood alcohol concentration, or BAC, is a measure of the percent, by weight, of alcohol in a person's blood. Statutorily, BAC is based upon grams of alcohol per 100 milliliters of blood or per 210 liters of breath.

CONVICTION

Conviction of an offense, as used in this report, refers to the receipt by DMV of a court abstract of conviction. In a small proportion of cases, an offender may be convicted of an offense but that conviction is not reported to DMV. Such cases would functionally be treated by DMV as though the offender had not been convicted. Because convictions can be amended, corrected, dismissed or simply not reported at all, the conviction totals reported herein are dynamic and subject to change.

COVARIATE

A variable used to statistically adjust the results of an analysis for differences (on that variable) existing among subjects prior to the comparison of treatment effects.

DUI

DUI is an acronym for "driving under the influence" of alcohol and/or drugs, a violation of Sections 23152 or 23153 of the California Vehicle Code.

LOGISTIC REGRESSION

Logistic regression analysis is a statistical procedure evaluating the linear relationship between various factors and the occurrence or nonoccurrence of an outcome event. In this study, the procedure was used to explain the relationship between the various sanctions and the proportion of DUI offenders who incurred accidents and/or DUI incidents.

MAJOR CONVICTION

Major convictions include primarily DUI convictions, but also reckless driving and hit-and-run convictions.

p

p stands for probability. For example, if $p<.05$, the probability is less than 5 chances in 100 that the difference you found is by chance alone.

QUASI-EXPERIMENTAL DESIGNS

Quasi-experimental designs refer to analyses where the comparison groups are not equivalent on characteristics other than the treatment conditions because random assignment was not used. Caution should be excercised when interpreting the results because of possible confounding of group bias with treatment effects. Covariates are used to statistically reduce group differences prior to the comparison of treatment effects.

SIGNIFICANT (STATISTICALLY)

If the result of a statistical test is significant, this means that the difference found is very unlikely by chance alone. How unlikely is determined by alpha.

APPENDIX A

Assembly Bill No. 757

CHAPTER 450

An act to add Section 1821 to the Vehicle Code. relating to driving offenses.

(Approved by Governor September 14, 1989. Filed with Secretary of State September 15, 1989.)

LEGISLATIVE COUNSEL'S DIGEST

AB 757, Friedman. Driving offenses: intervention programs: evaluation.

Under existing law, the Department of Motor Vehicles maintains records of driver's offenses reported by the courts. Including violations of the prohibitions against driving while under the influence of an alcoholic beverage, any drug, or both, driving with an excessive blood-alcohol concentration, or driving while addicted to any drug.

This bill would, additionally, require the department to establish and maintain a data and monitoring system, as specified, to evaluate the efficacy of intervention programs for persons convicted of those violations relating to alcohol and drugs, and to report thereon annually to the Legislature.

The bill would declare legislative findings.

The people of the State of California do enact as follows:

SECTION 1. The Legislature finds and declares as follows:

(a) Drivers under the influence of drugs or alcohol continue to present a grave danger to the citizens of this state.

(b) The Legislature has taken stern action to deter this crime and punish its offenders and has provided a range of sanctions available to the courts to use at their discretion.

(c) No system exists to monitor and evaluate the efficacy of these measures or to determine the achievement of the Legislature's goals.

(d) This lack of accurate and up-to-date comprehensive statistics hampers the ability of the Legislature to make informed and timely policy decisions.

(e) It is essential that the Legislature acquire this information, from available resources, as soon as practicable, and that this information be updated and transmitted annually to the Legislature.

SEC. 2. Section 1821 is added to the Vehicle Code, to read:

1821: The department shall establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted of violations of Section 23152 or 23153.

The system may include a recidivism tracking system. The recidivism tracking system may include, but not be limited to, jail sentencing, license restriction, license suspension. Level I (first offender) and II (multiple offender) alcohol and drug education and treatment program assignment, alcohol and drug education treatment program readmission and dropout rates, adjudicating court, length of jail term, actual jail or alternative sentence served, type of treatment program assigned, actual program compliance status, subsequent accidents related to driving under the influence of alcohol or drugs, and subsequent convictions of violations of Section 23152 or 23153.

The department shall submit an annual report of its evaluations to the Legislature. The evaluations shall include a ranking of the relative efficacy of criminal penalties, other sanctions, and intervention programs and the various combinations thereof.
