| 13. ABSTRACT (Maximum 200 words) In this twelfth annual legislatively mandated report, 2000 and 2001 DUI data from diverse sources were compiled and cross-referenced for the purpose of developing a single comprehensive DUI data reference and monitoring system. This report presents crosstabulated information on DUI arrests, convictions, court sanctions, administrative actions and alcohol-involved accidents. In addition, this report provides an evaluation of the effectiveness of alternative court and administrative sanctions (including alcohol treatment programs and license actions) upon the 1-year postconviction records of first and second DUI offenders over a time period of eleven years. The postconviction driving records of second DUI offenders arrested in 1998 and 2000 were evaluated for 3- and 1-year periods, respectively. Additional analyses were conducted on the effectiveness of alcohol education programs upon the 1-year post conviction records of those convicted of the reduced charge of alcohol-related reckless driving, and on the effectiveness of the 3-month versus 6-month alcohol education programs on the 1-year post conviction records of first offenders. | | | | |

| % of total injuries | 15.9 | 14.5 | 13.6 | 12.5 | 12.1 | 11.9 | 10.9 | 10.7 | 10.3 | 10.2 | 10.4 |

¹These totals were reported by the Department of Justice, Criminal Justice Statistics Center, and include a small number of duplicates (1.2% in 2001).

²These data represent a DMV master file count of the number of DUI abstracts received (by year of violation), minus duplicates. These totals do not include conviction abstracts not yet received. Thus, for the most recent years, these figures will substantially underestimate the final conviction totals.

³These data include a projected number of abstracts not yet received. This number is based on an empirically derived function of the court abstract reporting rate.

⁴These totals were taken from the Research DUI data file and the DMV annual Suspension and Revocation reports and include late reporting of convictions from prior years.

⁵Since 1991, total mandatory suspension/revocation exceeds the number of DUI arrests because many offenders now receive both an APS and postconviction suspension/revocation.

⁶This estimated final conviction rate has been adjusted for arrest data known to be missing.

⁷The 1997/1998 counts reflect backlogged actions from 1997 that were processed in 1998.

⁸These totals include suspension actions that are associated with lack of compliance with statutory requirements.

^rRevised from prior reports.

²The 1997/1998 counts reflect backlogged actions from 1997 that were processed in 1998.

^TRevised from prior reports.

HIGHLIGHTS OF YEAR 2003 CALIFORNIA DUI-MIS REPORT

- ▶ Alcohol-involved traffic fatalities increased by 6.1% in 2001, the third consecutive annual increase after well over a decade of continuous decline.
- ▶ DUI arrests decreased by 2.7% in 2001, following a 3.8% decrease in 2000.
- ▶ The number of persons injured in alcohol-involved accidents rose by 2.7% in 2001, following a 3.8% increase in 2000 (which was the first such increase in 14 years). Since 1991, however, alcohol-involved injuries have dropped by 43%.
- ▶ 13.5% of all 2000 DUI arrests were associated with a reported traffic accident, compared to 12.5% in 1999, 12.8% in 1998, 12.3% in 1997, 12.6% in 1996, 12.4% in 1995, 13.2% in 1994 and 13.1% in 1993. 44.1% of these accidents involved an injury or fatality.
- ▶ The average blood alcohol concentration (BAC) of a convicted DUI offender, as reported by law enforcement on APS forms, was .163% in 2000 (same as the last several years), which is more than double the California illegal per se BAC limit of .08%.
- ▶ Among 2001 DUI arrestees, Hispanics (44.7%) again constituted the largest racial/ethnic group, as they have each year since 1992 (with the exception of 1999). Hispanics, however, continued to be arrested at a rate substantially higher than their estimated percentage of California's adult population (31.3% in 2001). The ethnic distribution among DUI arrestees who are convicted fairly closely parallels the ethnic distribution of the arrestees.
- ▶ The average age of an arrested DUI offender in 2001 was 33.5 years. Less than 1% of arrested DUI offenders are juveniles (under age 18).
- ▶ Among convicted DUI offenders in 2000, 74.8% were first offenders and 25.2% were repeat offenders (one or more prior convictions within the previous 7 years). The proportion of repeat offenders has decreased slightly each year since 1989, when it stood at 37%.
- ▶ 10.1% of 2000 DUI arrest cases did not show any corresponding conviction on DMV records. This is a decrease from 17.3% in 1999, 14.4% in 1998 and 15.8% in 1997.
- ▶ Alcohol treatment, in conjunction with license restriction, continued to be the most effective postconviction sanction in reducing subsequent DUI incidents among second DUI offenders. Similar to last year's findings, second offenders assigned to ignition interlock, in addition to license restriction and alcohol treatment, did not show a significantly different 1-year DUI incident rate from that of the second offender alcohol treatment group.

ACKNOWLEDGMENTS

The authors acknowledge with appreciation the many individuals who have contributed to the success of this project. In particular, we wish to acknowledge the cooperation of the Department of Justice, Criminal Justice Statistics Center, in providing annual DUI arrest data and documentation. The contributions of Debbie McKenzie, Associate Governmental Program Analyst, in transforming mainframe computer files into readable data tables and figures, as well as her general assistance in the production of this report, are acknowledged with appreciation. We also would like to acknowledge the contributions of Patrice Rogers, Research Program Specialist II, and Kevin L. Nguyen, Staff Programmer Analyst, and David J. DeYoung, Research Manager II, Alcohol/Drug Projects.

Report Authors:

Helen N. Tashima, Research Program Specialist II, Principal Investigator and
Clifford J. Helander, Research Manager III, Project Manager and Chief, Research &
Development Branch.

INTRODUCTION

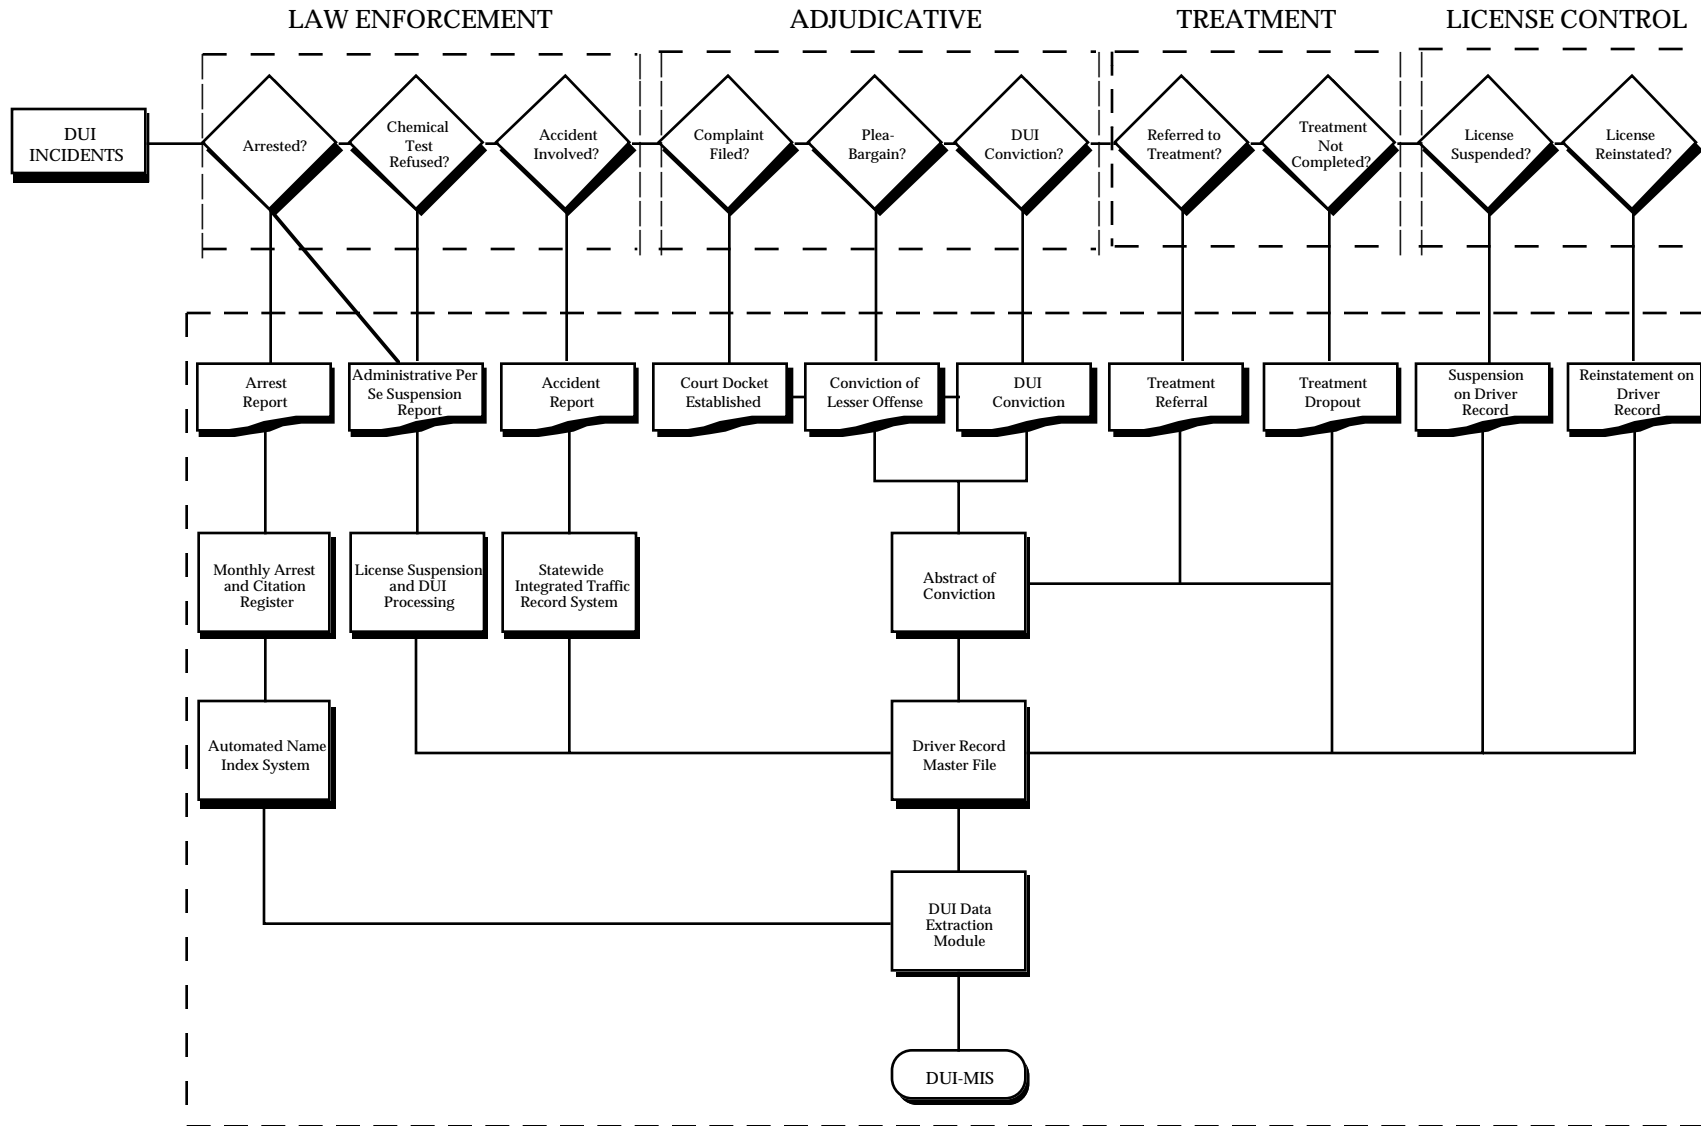

This report is the twelfth Annual Report of the California DUI Management Information System, produced in response to Assembly Bill 757 (Friedman), Chapter 450, 1989 legislative session (see Appendix A). This bill required the Department of Motor Vehicles (DMV) to "establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted" of DUI in order to provide "accurate and up-to-date comprehensive statistics" to enhance "the ability of the Legislature to make informed and timely policy decisions." The need for such a data system had long been documented by numerous authorities, including the 1983 Presidential Commission on Drunk Driving. In responding to this legislative mandate, this report combines and cross-references DUI data from diverse sources and presents them in a single reference. Data sources drawn upon include the California Highway Patrol (CHP) for accident data, Department of Justice (DOJ) for arrest data, and the DMV driver record database. Each of these reporting agencies, however, initially draw their data from diffuse primary sources such as individual law enforcement agencies (arrest and accident reports) and the courts (abstracts of conviction).

The general conceptual design of the California DUI management information system (DUI-MIS) is presented in Figure 1. The basic theme of the DUI-MIS is to track the processing of offenders through the DUI system from the point of arrest and to identify the frequency with which offenders flow through each branch of the system process (from law enforcement through adjudication to treatment and license control actions). Figure 1 also illustrates the relationship between offender flow and data collection at each point of the process. The initiating data source for the DUI-MIS is the DUI arrest report, as compiled by the DOJ Law Enforcement Information Center's Monthly Arrest and Citation Register (MACR) system.

Another major objective of this report is to evaluate the effectiveness of court and administrative sanctions on convicted DUI offenders. This is accomplished by examining the postconviction recidivism records (alcohol/drug-related accidents and traffic convictions) of offenders assigned to alternative sanctions, as detailed in Section 4 on "Postconviction Sanction Effectiveness." It should again be noted that it is not an objective of this report to make recommendations based on the data presented. Rather, the primary purpose of a reporting system such as the DUI-MIS is to provide objective data on the operating and performance characteristics of the system for others to assess in making policy decisions, formulating improvements and conducting more in-depth evaluations.

The DUI-MIS data system and report has led to numerous improvements in the California DUI system, from the identification of inappropriate dismissals in a small central valley court to major initiatives to improve the tracking and reporting of DUI cases. The success of the California DUI-MIS has also contributed to a national initiative to design a model DUI reporting system, developed under contract to the National Highway Traffic Safety Administration (NHTSA).

Figure 1. DUI management information system.

SECTION 1: DUI ARRESTS

The information presented below on DUI arrests is based primarily on data collected annually by the Department of Justice (DOJ), Law Enforcement Information Center, Monthly Arrest and Citation Register (MACR) system. These data are the most current nonaggregated data available on DUI arrests.

Table 1: DUI Arrests by County and Annual Percentage Change from 1999-2001. The number of DUI arrests by county for the years 1999-2001 and the percentage change from 2000-2001 are shown in Table 1.

Table 2: 2001 DUI Arrests by County and Type of Arrest. This table shows a breakdown of 2001 DUI arrests by felony, misdemeanor, and juvenile arrest type, by county. The table also shows county and statewide DUI arrest rates per 100 licensed drivers.

Tables 3a and 3b: 2001 DUI Arrests by Age, Sex, and Race/Ethnicity. Table 3a crosstabulates age by sex and age by race/ethnicity of 2001 DUI arrestees statewide. The same tabulations by county are found in Appendix Table B1. Table 3b shows the same data crosstabulated by sex and age within race/ethnicity.

Figure 2 below displays the trend in DUI arrests from 1991 to 2001.

Figure 2. DUI arrests 1991-2001.

Based on the data shown in Figure 2 and Tables 1, 2, 3a, and 3b, the following statements can be made about DUI arrests in California:

Statewide Parameters:

- ▶ DUI arrests decreased by 2.7% in 2001, following a 3.8% decrease in 2000.
- ▶ The per capita DUI arrest rate was 0.8% in 2001 (as it was in 2000, but down from 0.9% in 1997-99). This represents over a 50% reduction from the 1.8 rate in 1990.
- ▶ Felony DUI arrests (involving bodily injury or death) were up very slightly in 2001 (3.1% of all DUI arrests, compared to 3.0% in 2000), yet continue to constitute a relatively small proportion of all DUI arrests.

County Variation:

- ▶ 21.7% of all 2001 California DUI arrests occurred in Los Angeles County. Four counties (Los Angeles, San Diego, Orange, and San Bernardino) had over 10,000 DUI arrests each, accounting for 43.2% of all arrests.
- ▶ The 2001 county per capita DUI arrest rates ranged from 0.3 to 5.9 DUI arrests per 100 licensed drivers. Ten counties had rates of 0.7 or below. These low per capita arrest rate counties were San Francisco (0.3), Alameda, Orange, and Santa Clara (0.6), Calaveras, Contra Costa, Los Angeles, Mariposa, San Mateo, and Solano (0.7). Four counties had rates of 2.0 or higher—Alpine (5.9), Trinity (2.6), Colusa and Tehama (2.2).
- ▶ As in past years, many counties again showed a decline in DUI arrests in 2001. Among the larger counties, the greatest percentage decline occurred in Orange (-13.8%) and Santa Clara (-13.0%). Among smaller counties, the largest percentage decreases in DUI arrests occurred in Modoc (-30.2%) San Benito (-25.4%), and Plumas (-21.8%). Among counties showing percentage increases in DUI arrests were Alpine (106.9%), Tehama (60.7%), and Yuba (49.9%).

Demographic Characteristics:

- ▶ The average age of a DUI arrestee in 2001 was 33.5 years. After increasing each year during the early 1990's, the average age of a DUI arrestee has declined slightly each year since 1997. Roughly half (47.4%) of all arrestees were age 30 or younger and almost three-quarters (74.2%) were age 40 or younger. Less than 1% of all DUI arrests involved juveniles (under age 18). 2.2% of all arrestees were over age 60.
- ▶ Males comprised 84.8% of all 2001 DUI arrests. The proportion of females among DUI arrestees has risen slightly each year this report has been produced, from 10.6% in 1989 to 15.2% in 2001.

- ▶ In 2001, Hispanics (44.7%) again represented the largest ethnic group among DUI arrestees as they have each year since 1992 (with the exception of 1999, when Whites were the largest group at 42.8%). Hispanics, however, continued to be arrested at a rate substantially higher than their estimated 2001 population parity of 31.3% (Department of Finance, Demographic Research and Census Data Center). Blacks were also overrepresented among DUI arrestees (7.0% of arrests, 6.7% of the population), while other racial/ethnic groups were underrepresented among DUI arrestees, relative to their estimated 2001 population parity. These underrepresented groups were Whites (42.6% of arrests, 49.7% of the population), and "Other" (6.3% of arrests, 12.4% of the population). Figure 3 below shows the percentages of 2001 DUI arrests and 2001 estimated census adult population by race/ethnicity.
- ▶ Among male 2001 DUI arrestees, 48.0% were Hispanic, 38.9% were White, 6.8% were Black, and 6.3% were "Other." Among female DUI arrestees, 63.3% were White, 22.3% were Hispanic, 8.2% were Black, and 6.2% were "Other." The overrepresentation of Hispanics among DUI offenders is clearly limited to males.
- ▶ In the following 7 counties, Hispanics comprised 60% or more of those arrested for DUI during 2001: Tulare (76.3%), Merced (67.7%), Fresno (67.6%), San Benito (66.2%), Imperial (65.4%), Monterey (63.7%), and Madera (60.0%). In most other counties, the majority of arrestees were White.
- ▶ The average age of a DUI arrestee varied considerably by race: Blacks were the oldest with a mean age of 36.0 years, while Hispanics were the youngest, with a mean age of 31.3 years.

Figure 3. Percentage of 2001 DUI arrests and 2001 projected population (age 15 and over) by race/ethnicity.

SECTION 2: CONVICTIONS

Data on convictions resulting from court adjudication of DUI arrests are reported directly to the Department of Motor Vehicles (DMV) on court abstracts of conviction. The following tables compile and crosstabulate these conviction data by demographic, geographic, and adjudicative categories. In what follows, expressions like "2000 convictions" refer to DUI offenders arrested in 2000, who were subsequently convicted.

Table 4: 2000 DUI Convictions by Age and Sex. This table crosstabulates statewide DUI conviction information by age and sex. Corresponding county-specific conviction data are presented in Appendix Table B2.

Table 5: Matchable 2000 DUI Convictions by Age, Race/Ethnicity, and Sex. This table displays DUI conviction information by age, race/ethnicity, and sex. "Matchable" DUI convictions are those which are traceable to a DUI arrest appearing on the MACR system. Because not all arrests could be matched to an existing record, these conviction totals underestimate the total number of actual convictions.

Table 6: Adjusted 2000 DUI Conviction Rates and Relative Likelihood of Conviction by Age and Race/Ethnicity. This table shows the relative probability of a DUI arrest leading to a DUI conviction by age and race/ethnicity. DUI conviction totals from categories in Table 5 ("matchable DUI convictions") were increased by the proportion which matchable convictions constituted of "total DUI convictions," shown in Table 7, to arrive at the adjusted DUI conviction rates. As explained above, without this adjustment DUI conviction rates would be underestimated using the conviction data from Table 5 because not all reported convictions are "matchable" to an arrest.

Table 7: Total Conviction Data for 2000 DUI Arrestees. This table portrays county and statewide DUI-related conviction data as reported to the DMV on court abstracts of conviction. Corresponding court-specific data are shown in Appendix Table B3. Convictions not reported to DMV are considered nonconvictions for the purposes of this report. Actual nonconvictions include cases where the DUI arrest was not filed, not prosecuted, or resulted in a not guilty verdict. The DUI conviction rates by county were calculated by comparing the county conviction totals with DOJ arrest totals. Because not all 2000 DUI arrests have yet been adjudicated, these conviction totals and rates will slightly underestimate the "final" figures. The DUI conviction rates shown in the "DUI Summary Statistics: 1991-2001" table at the very beginning of this report include an estimate of these late convictions, and thus are slightly higher than those shown in Tables 7 and 8. Conviction variables include felony and misdemeanor DUI convictions, alcohol- and nonalcohol-related reckless driving convictions, convictions of "other" lesser offenses, and DUI convictions dismissed or found unconstitutional. DUI arrest dates from the DOJ MACR system were matched to driver record violation dates to identify nonalcohol-related reckless driving and "other" convictions. The average (mean) adjudication time lags from DUI arrest to conviction, and from conviction to update on the DMV database, were calculated for each county.

Table 8: Adjudication Status of 2000 DUI Arrests by County. This table shows the adjudication status (court disposition) of 2000 DUI arrests, by county. Included are the percentages of arrests which have resulted in DUI convictions (misdemeanor or felony), reckless driving convictions (alcohol-related or nonalcohol-related), convictions of

"other" offenses, or no reported conviction, as of the date of writing. Again, because not all 2000 DUI arrests have yet been adjudicated, these rates will slightly underestimate the "final" rate for each category, excepting the category "no record of any conviction," which will be slightly reduced (approximately 1-2%) by the eventual adjudication of these few late cases.

Table 9a: 2000 Reported Blood Alcohol Concentration (BAC) Levels of DUI Convictions and Table 9b: 2000 Reported Blood Alcohol Concentration (BAC) Levels of Convicted DUI Offenders Under Age 21. Table 9a shows the frequency of reported positive BAC levels for DUI and alcohol-reckless convictions. Because of more complete reporting of BAC levels on APS reporting forms (80.2%) than on abstracts of conviction, those reports are used to calculate statewide BAC levels. Abstracts of conviction, which were used in prior evaluations, report BAC levels in only 54.3% of cases. Table 9b shows the BAC distribution for convicted arrestees under age 21.

Table 10: 2000 DUI Convictions by Offender Status and Average Reported BAC Level. This table displays the proportions of convicted DUI offenders by offender status (number of prior convictions in seven years), and the average (mean) BAC level from APS reporting forms and abstracts of conviction, for each offense level.

Figure 4 (below) shows, for the years 1991 to 2001, the number of DUI abstracts received to date by DMV from the courts, the estimated final number of DUI convictions which will ultimately be received, and the estimated final DUI conviction rate.

Note. Estimated DUI convictions = see footnote 3 to "DUI Summary Statistics: 1991-2001."

Figure 4. DUI abstracts received by DMV and DUI conviction volume and rate estimates, 1991-2001.

Based on these data, the following statements can be made:

Statewide Adjudication Parameters:

- ▶ The estimated DUI conviction rate for 2001 arrestees (77%) increased slightly from previous years.
- ▶ 10.1% of 2000 DUI arrests resulted in reckless driving convictions, and 17.8% of these were not correctly identified as alcohol-related on the abstracts.
- ▶ 1.5% of 2000 DUI arrests have resulted in convictions of offenses other than DUI or reckless driving, down slightly from the previous several years.
- ▶ 10.1% of 2000 DUI arrests have not yet resulted in any conviction on DMV's records, compared to 17.3% in 1999, 14.4% in 1998, 15.8% in 1997, 18.5% in 1996, 16.3% in 1995, 18.0% in 1994, 18.8% in 1993 and 19.2% in 1992. As additional cases are adjudicated and reported by the courts, this figure will decrease slightly.
- ▶ The average reported BAC level for all convicted DUI offenders in 2000, using APS reporting forms as the data source, was 0.163%, which is the same as the last several years, yet still more than double the illegal per se BAC limit of 0.08%.
- ▶ Average BAC levels increase as a function of the number of prior DUI convictions, from a 0.159% BAC for a first offense to a 0.182% BAC for a fourth or subsequent offense.
- ▶ Among 2000 convicted DUI offenders, 74.8% were first offenders, 20.0% were second offenders, 4.2% were third offenders, and 1.0% were on their fourth or more offense. (The statutorily defined time period for counting priors in California is seven years.) The proportion of repeat offenders (25.2%) among all convicted DUI offenders has decreased slightly each year since 1989 (at which time 37% of all convictions were repeat offenses).
- ▶ The average (mean) adjudication time lags were 3.0 months from DUI arrest to conviction and 3.1 months from conviction to update on the DMV database, totalling over 6 months from arrest to update on the offender's driving record. This total elapsed time from arrest to update is similar to that in prior years.

Variation by County:

- ▶ Among the larger counties, 2000 DUI conviction rates varied from highs of 92.9% in Orange and 89.3% in Ventura to a low of 60.8% in Fresno. Los Angeles County, which accounted for almost a quarter of all DUI arrests in the state, had a DUI conviction rate of 74.0%.
- ▶ Among the smaller counties, 2000 DUI conviction rates varied from a high of 93.9% in Tuolumne to a low of 38.5% in Trinity.
- ▶ The rates at which DUI arrests were plea-bargained to alcohol-related reckless driving convictions varied from over 25% in Del Norte County to 0% in Alpine, Marin and Ventura counties.

- ▶ The percentage of DUI arrests that were improperly adjudicated as nonalcohol-related reckless driving convictions varied from 0% to 9.8%. Seven counties had rates of 5% or more: San Francisco, Glenn, Alpine, Amador, Lassen, Calaveras, and Mariposa.
- ▶ The percentage of DUI arrests adjudicated as minor convictions ("other" convictions) varied from 0% to 9.8%. Sierra, San Luis Obispo, Los Angeles, Alpine and Amador counties had rates of 3% or more.
- ▶ In 3 counties, the proportion of arrestees not showing a conviction of any offense exceeded 30%. These counties were Trinity, Sutter, and Imperial. Twenty-five counties had nonconviction rates of less than 10%, with Mono, Shasta, Tehama, and Tuolumne at 0%.

Variation by Court:

- ▶ As was true for prior years, the 2000 superior court time lags were generally longer than municipal court time lags, presumably due to the type of DUI case (felony) being adjudicated.
- ▶ Municipal court time lags from arrest to conviction (for courts with more than a handful of reported convictions) varied from a high of 7.5 months in the Brawley court (Imperial County) to a low of 1.4 months for the Santa Maria court (Santa Barbara County). Interestingly, the busiest DUI court in the state, Los Angeles Metro, had a time lag from arrest to conviction of only 1.6 months.
- ▶ Statewide, the proportion of reckless driving convictions (alcohol and nonalcohol), relative to all other dispositions resulting from DUI arrests, was about 10% in 2000 (slightly up from last year). Several counties adjudicated more than 20% of their DUI arrests as reckless driving convictions, including Del Norte, Plumas, and San Francisco.
- ▶ Statewide, 17.8% of all DUI-related reckless driving convictions in 2000 are inappropriately designated as nonalcohol, compared to 21.1% in 1999, 19.6% in 1998 and 21% in 1997. In Alpine County, 6.9% of all 2000 DUI arrests resulted in a reckless driving conviction, all of them inappropriately designated as nonalcohol.

Demographic Characteristics:

- ▶ The average age of a convicted DUI offender in 2000 was 34.6 years.
- ▶ 43% of 2000 DUI convictees were aged 30 years or younger and 72% were 40 years or younger.
- ▶ Females comprised 15.1% of all 2000 convicted DUI offenders. The proportion of females among convicted DUI offenders has risen slightly each year since 1993.
- ▶ The racial/ethnic distribution of 2000 DUI convictions (White = 44.1%; Hispanic = 43.2%; Black = 6.2%; "Other" = 6.6%) generally paralleled that of 2000 arrests, although Whites were somewhat more likely, and Blacks somewhat less likely, to be convicted of the offense (as shown in Figure 5 below).

Figure 5. Relative likelihood of conviction by race/ethnicity. (Adjusted conviction rate by ethnicity ÷ overall conviction rate.)

TABLE 4: 2000 DUI CONVICTIONS BY AGE AND SEX*

¹Conviction data by court are found in Appendix Table B3.²This count includes misdemeanors which carried a felony disposition code. These counts do not include 4th offenses (in seven years) which are statutorily defined as felonies.³These dismissals were identified in DMV's DUI Audit and Tracking System Summary Report.⁴These 2000 arrestees showed prior DUIs declared unconstitutional on their records. The counties reported here are those in which the current DUI conviction occurred and not necessarily those in which a prior conviction was declared unconstitutional.⁵The calculation of the conviction rate was based on total arrests including federal DUI arrests (Yosemite National Park) not reported in the DOJ MACR system.

TABLE 7: TOTAL CONVICTION DATA FOR 2000 DUI ARRESTEES¹ - continued

| COUNTY | DUI CONVICTION RATE | MISD DUI | FELONY DUI ² | ALCOHOL RECKLESS | NONALCOHOL RECKLESS | OTHER CONVICTIONS | DUI DISMISSED ³ / UNCONST ⁴ | AVERAGE DUI ADJUDICATION TIMES (MONTHS) | |

| | MEAN BAC .163 | | | MEAN BAC .095 | |

*The source of BAC data is the APS reporting form for convicted DUI offenders, rather than the abstract of conviction for those offenders, which was the data source in the earliest reports. This change in data source was made because of the more complete BAC reporting on APS forms (80.2% of total) versus court abstracts (with only 54.3% showing BAC levels). This chart does not include 885 zero BAC levels.

TABLE 9b: 2000 REPORTED* BLOOD ALCOHOL CONCENTRATION (BAC)
LEVELS OF CONVICTED DUI OFFENDERS UNDER AGE 21

| BAC LEVEL | FREQUENCY | PERCENT | BAC LEVEL | FREQUENCY | PERCENT |
|-----------|-----------|---------|-----------|---------------|---------|

| .19 | 254 | 4.2 | | MEAN BAC .137 | |

*The source of BAC data is the APS reporting form for arrested DUI offenders. The proportion of BAC levels found for 2000 convicted under age 21 cases is 82.6%.

TABLE 10: 2000 DUI CONVICTIONS BY OFFENDER STATUS AND
AVERAGE REPORTED BAC LEVEL

| DUI OFFENDER STATUS | PERCENT | AVERAGE BAC LEVEL FROM APS REPORTING FORM (%) | AVERAGE BAC LEVEL FROM CONVICTION ABSTRACT (%) |
|---------------------|---------|---|--|
| STATEWIDE | 100.0 | .163 | .161 |
| 1ST DUI | 74.8 | .159 | .158 |
| 2ND DUI | 20.0 | .172 | .169 |
| 3RD DUI | 4.2 | .180 | .178 |
| 4TH+ DUI | 1.0 | .182 | .177 |

SECTION 3: POSTCONVICTION SANCTIONS

Data on court sanctions assigned to convicted DUI offenders were taken from DUI abstracts of conviction for offenders arrested in 2000. Also included are counts of postconviction DMV license actions for selected offender groups, while total counts of all license actions, including administrative per se (APS) license suspensions and revocations, are shown in the Administrative Actions Section. APS actions (effective July 1990) are initiated by law enforcement immediately upon arrest for DUI, and are administered independently of the criminal adjudication process. This section includes the following tables:

Table 11: 2000 DUI Court Sanctions by DUI Offender Status. This table shows the frequency of specific court sanctions statewide by number of prior DUI convictions. The specific court sanctions tallied include percentages of probation, jail, alcohol treatment programs (first offender, SB 38 second offender, and 30-month third offender programs), license restriction, court suspension, and ignition interlock. Crosstabulations of sanctions by county, court, and number of prior convictions appear in Appendix Table B4.

Table 12: 2000 DUI Sanction Combinations by County - First Offenders. This table displays the frequency of commonly assigned court sanction combinations (such as first offender alcohol program plus license restriction) by county for first DUI offenders. License suspensions include both court and DMV postconviction (non-APS) suspensions. The sanction combination groups portrayed in this table, as well as in Table 13, were defined according to the conventions described in the "Evaluation Methods and Results" portion of Section 4: "Postconviction Sanction Effectiveness."

Table 13: 2000 DUI Sanction Combinations by County - Repeat Offenders. This table shows the frequency of commonly assigned court sanction combinations by county for second, third, and fourth (or subsequent) DUI offenders. License actions include both court and DMV postconviction (non-APS) license suspensions and revocations.

From the data in these and the Appendix tables, it is evident that the use of alternative sanctions continued to vary widely by county, court, and offender status in 2000. For example:

Statewide Parameters:

- ▶ The most frequently applied court sanction among all convicted DUI offenders was probation (96.5%), while the least frequently used court sanction was ignition interlock (2.3%). DUI offenders were sentenced to jail in 72.4% of the cases. (However, in many jurisdictions, jail is often served as community service rather than actual jail time.)

Figure 6 (below) graphically displays the statewide data from Table 11 showing the percentage representation of specific types of court-ordered sanctions among all convicted DUI offenders. Because virtually all offenders receive more than one type of sanction, the cumulative percentage adds to much more than 100%.

Figure 6. Percentage representation of court-ordered DUI sanctions (2000).

County Variation:

- ▶ The proportion of 2000 first-DUI offenders receiving a court or DMV postconviction suspension varied by county from 16.5% in Plumas County to 81.3% in Alpine County.
- ▶ Use of first DUI offender alcohol programs plus license restriction varies by county from over 70% in Plumas and Tuolumne counties to less than 10% in Tehama County.
- ▶ Counties departing from using typical first offender sanction combinations were Amador, Contra Costa, Humboldt, Mariposa, Placer, and Tehama, as shown by relatively high percentages (over 10%) in the "other" category. ("Other" includes license restriction without treatment program assignment, probation only, and other unofficial nonstatutory sanction combinations.)

Court Variation:

- ▶ Statewide, there can be extreme variation by court in the use of available sanctions for DUI offenders. In Santa Barbara County alone, one court (Santa Maria) assigned jail to 92.5% of all convicted DUI offenders ($n = 848$), while another court (Lompoc) in the same county assigned jail to only 37.9% of all convicted DUI offenders ($n = 317$).
- ▶ In Los Angeles County, three municipal courts (Burbank, Compton, and Lancaster) used jail as a sanction in 95% or more of their DUI sentences. On the other hand, six other courts (Inglewood, Long Beach, Monrovia, Santa Monica, Malibu and Bellflower) used jail as a sanction in less than 30% of their DUI sentences.
- ▶ In 2000, Los Angeles was the only county with an active 30-month third offender treatment program. Even within this county, however, assignment of third offenders to this program modality varied by court from highs of about 45% of third offenders sentenced in the Lancaster and Malibu courts to 0% of such offenders in many other municipal courts within Los Angeles County.
- ▶ Statewide, courts required only 2.3% of all convicted DUI offenders to install the ignition interlock device in 2000. This is down from 6.3% in 1997 and 1998, primarily

because new legislation shifted the mandatory interlock requirement from all repeat DUI offenders to all suspended or revoked DUI offenders caught driving while disqualified, and data on the new “mandatory” interlock assignments are not captured by the DUI-MIS report.

Variation by Offender Status:

- ▶ Less than 70% of 2000 first-DUI offenders were sentenced to jail, compared to over 90% of all repeat offenders.
- ▶ 87% of first DUI-offenders were assigned to alcohol treatment programs, along with 83% of second offenders, 55% of third offenders, and 29% of fourth or more DUI offenders. (By statute, however, all offenders must eventually complete specified alcohol treatment programs in order to be eligible for license reinstatement.)
- ▶ 4.9% of first-DUI offenders and 11.1% of repeat-DUI offenders received court license suspensions in 2000. Since July 1990, all DUI offenders with BAC levels of 0.08% or more are also subject to a 30-day to 1-year administrative license suspension/revocation under the APS law.
- ▶ Only 7.5% of repeat-DUI offenders were assigned ignition interlock in 2000, down from 13.3% in 1999 and 22.3% in 1998. In spite of the old mandatory interlock law for all repeat offenders (AB 2851 - Freidman), which took effect on July 1, 1993, judges routinely did not assign interlock to these offenders (over 75% of “mandatory” assignments were not made). This law was repealed in 1998, and a new ignition interlock law (AB 762 - Torlakson) and program was enacted and implemented July 1, 1999, which established mandatory interlock for DUI suspension/revocation violators, while providing incentives for repeat offenders to reinstate early with interlock. Judicial assignments to the new mandatory provisions have steadily risen since the law was implemented, and proportionally more DUI suspension violators are now assigned to interlock than were repeat offenders under the old “mandatory” law.

TABLE 11: 2000 DUI COURT SANCTIONS BY DUI OFFENDER STATUS*

| DUI OFFENDER STATUS | TOTAL | PROBATION | JAIL | 1ST OFFENDER ALCOHOL PROGRAM | SB 38 ALCOHOL PROGRAM | 30-MONTH PROGRAM | LICENSE RESTRICTION | COURT SUSPENSION | IGNITION INTERLOCK |
|---------------------|--------|-----------|------|------------------------------|-----------------------|------------------|---------------------|------------------|--------------------|
| | | % | % | % | % | % | % | % | % |
| STATEWIDE | 138349 | 96.5 | 72.4 | 66.2 | 18.1 | 0.2 | 74.4 | 6.5 | 2.3 |
| 1ST DUI | 103629 | 97.3 | 65.1 | 85.3 | 2.1 | 0.0 | 80.7 | 4.9 | 0.6 |
| 2ND DUI | 27394 | 96.1 | 94.0 | 11.0 | 71.9 | 0.2 | 66.2 | 10.1 | 7.1 |
| 3RD DUI | 5815 | 91.2 | 94.2 | 3.7 | 49.0 | 2.6 | 18.9 | 16.1 | 10.5 |
| 4TH+ DUI | 1511 | 64.9 | 94.7 | 2.0 | 25.6 | 1.2 | 5.2 | 13.4 | 3.7 |

*Entries represent percentages of 2000 DUI convictees receiving each sanction by offender status. Sanctions within each offender status group (row) are not independent; therefore, row percentages always add to more than 100%. Percentages of sanctions by county and court appear in Appendix Table B4.

Note: The vast majority of convicted DUI offenders also receive fine and probation.

¹Includes referral to alcohol clinics and 30-month programs.

²The number of offenders in both categories (no license action in either group) has decreased considerably since courts implemented the provisions of AB 762. This law requires that the licenses of all first offenders be suspended or restricted upon a DUI conviction, in addition to other penalties.

SECTION 4: POSTCONVICTION SANCTION EFFECTIVENESS

This section presents and describes the results of an evaluation assessing the effectiveness of court and administrative sanctions applied to, 1) first and second DUI offenders over a time period of eleven years,¹ 2) DUI offenders convicted of the reduced charge of alcohol-related reckless driving (with a one-year follow-up period), and 3) a new analysis of first DUI offenders referred to 3-month versus 6-month alcohol education programs (one-year follow-up period). The effectiveness of alternative sanctions for the alcohol-reckless and first and second offenders is evaluated in terms of postconviction driving record as measured by: 1) total accidents and 2) DUI incidents, which include alcohol-involved accidents, major convictions (primarily DUI, but also all reckless driving [alcohol or non-alcohol] and hit-and-run), APS (0.08% BAC or chemical test refusal) suspensions, and DUI failure-to-appear notices (FTA).

Displayed below, in Figures 7a and 7b, are proportions of DUI recidivist incidents over time from 1990 through 2000; these proportions were derived from the sanction analyses for first and second offenders (grouped by sanction assignment) from previous DUI-MIS annual reports and are based on follow-up time periods of one year. There are typically three variants of first-offender DUI alcohol education/treatment program sanctions, and these were collapsed together into a single sanction group for ease of viewing and interpretation. This year, these figures exclude the jail group (no program referral and no license action) because since July, 1999, by law, the licenses of first offenders are either suspended or restricted, and if probation is granted, they are referred to alcohol education program. Figures 7a and 7b do not address total accidents, which are displayed in Figures 8a and 8b. They display covariate-adjusted data which are described below.

Figures 9a and 9b which also display covariate-adjusted data, as described below, show the proportion of total accident- or DUI-incident-involved alcohol-reckless offenders for the period 7/00 - 6/01 (1-year follow-up period), and first offenders who were referred to 3-month or 6-month alcohol education programs for the same 1-year subsequent period. Figures 10a and 10b show similar covariate-adjusted accident and DUI-incident data for second offenders arrested in 1998 and 2000, with subsequent time periods of 3 years and 1 year, respectively. The evaluation for second-DUI offenders is reported here because the ignition interlock sanction is not imposed on all second offenders, and its assessment may contribute to clarifying and perhaps modifying current sanctioning policy. The evaluation for the offenders with alcohol-related reckless convictions was mandated by SB 1176 (Johnson); for these offenders, this bill requires the courts to order enrollment in an alcohol/drug education program as a condition of probation. An evaluation of the efficacy of the 3-month versus 6-month alcohol education/counseling program for first offenders was required by AB 1916 (Torlakson). The courts are required to refer first offenders whose BAC level is less than .20%, by weight, to a 3-month program, and those with a BAC level of .20% or above, or who refuse to take a chemical test, to a 6-month program. The figures are followed by a narrative description of the evaluation design, subject selection, data collection, analytical procedures, and evaluation results. The reader is cautioned that license suspension (as assessed in this study) refers to postconviction suspensions only, and

¹ Third-or-more offenders were not included because a previous study (Tashima & Marelich, 1989) indicated serious confounding due to group differences on prior interventions. In addition, sanctions for these offenders do not vary much, due to the statutorily prescribed sanction requirements.

does not include preconviction administrative per se license suspensions (which are applied to all offender groups).

Based on the data represented in Figures 7a, 7b, 8a, and 8b, the following conclusions can be drawn about first- and second-offender sanctions from 1990 to 2000:

- ▶ One-year recidivism rates for both first-offender sanction groups increased in 2000 but continued to remain at the lower rates of the last six years. Comparing these rates to the higher rates of 1990, reductions in DUI reoffenses were equivalent to 29.6% for the suspended group and 14.3% for the combined first-offender DUI treatment group.
- ▶ The one-year reoffense rates for the second-offender sanction groups increased slightly for two groups but overall remained at the lower levels of the past six years; recidivism decreased (from 1990 to 2000) by 37.6% for the suspended group, 30.8% for the SB 38/license restriction group, and 39.1% for the “other” group.
- ▶ Overall, subsequent one-year accident rates have declined from 1990 to 2000 for second offenders, but the rates have leveled out in recent years, with slight increases in the rates of all of the sanction groups in the past two years. The accident rates in 2000 for both first offender groups have increased slightly beyond the 1990 accident rates by 4.2% and 1.6%.
- ▶ The relationship between type of sanction and subsequent DUI reoffense rate has remained relatively constant for first offenders since 1990, with the alcohol treatment and license suspension groups exhibiting similar reoffense rates.

Figure 7a. Adjusted percentages of first-DUI offenders reoffending in a DUI incident within one year after conviction, by type of sanction (arrested in 1990-2000).

Figure 7b. Adjusted percentages of second-DUI offenders reoffending in a DUI incident within one year after conviction, by type of sanction (arrested in 1990-2000).

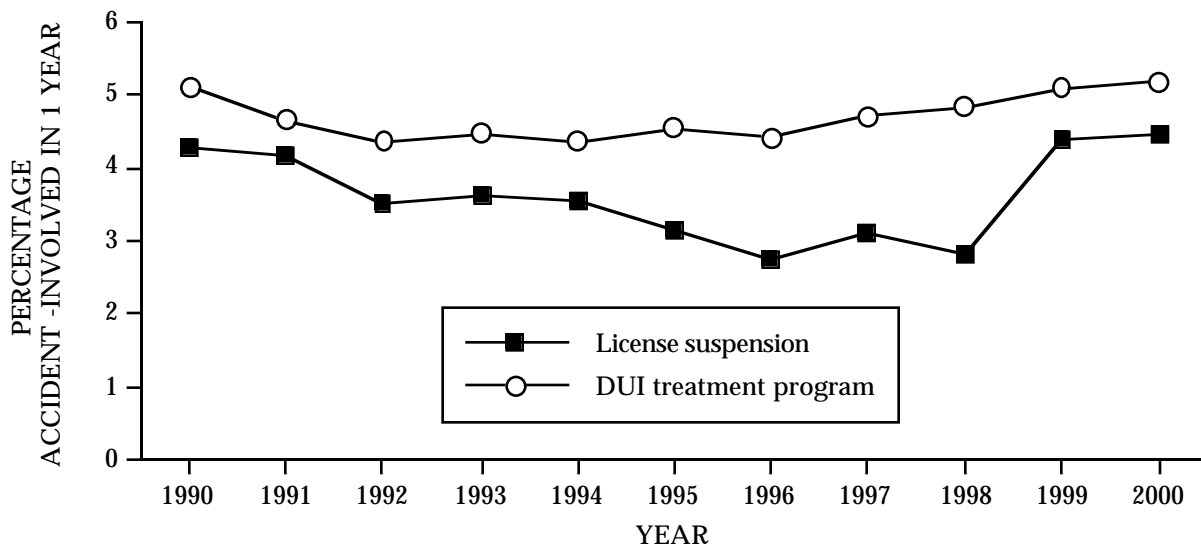

Figure 8a. Adjusted percentages of first-DUI offenders involved in an accident within one year after conviction, by type of sanction (arrested in 1990-2000).

Figure 8b. Adjusted percentages of second-DUI offenders involved in an accident within one year after conviction, by type of sanction (arrested in 1990-2000).

Based on the data portrayed in Figure 9a, the following conclusions can be made about the impact of alcohol education programs upon offenders convicted of alcohol-related reckless driving (those arrested for DUI but convicted of the reduced charge of reckless driving).

- ▶ As was evident last year, subsequent one-year accident rates of alcohol-related reckless offenders did not vary significantly between those assigned to an alcohol education program and the non-participants. However, in contrast to last year, the subsequent DUI offense rate of the program participants was not significantly lower than that of the non-participants.

Figure 9b displays the one-year accident and DUI-related incident rates for those referred to 3-month and 6-month alcohol education programs. The following tentative conclusions can be made about the evaluation of length of alcohol education programs for first offenders.

- ▶ The one-year accident rates of first offenders attending the 3-month program did not vary significantly from those attending 6-month programs. However, the subsequent DUI offense rate of the short-term program participants was significantly lower than that of the long-term participants.

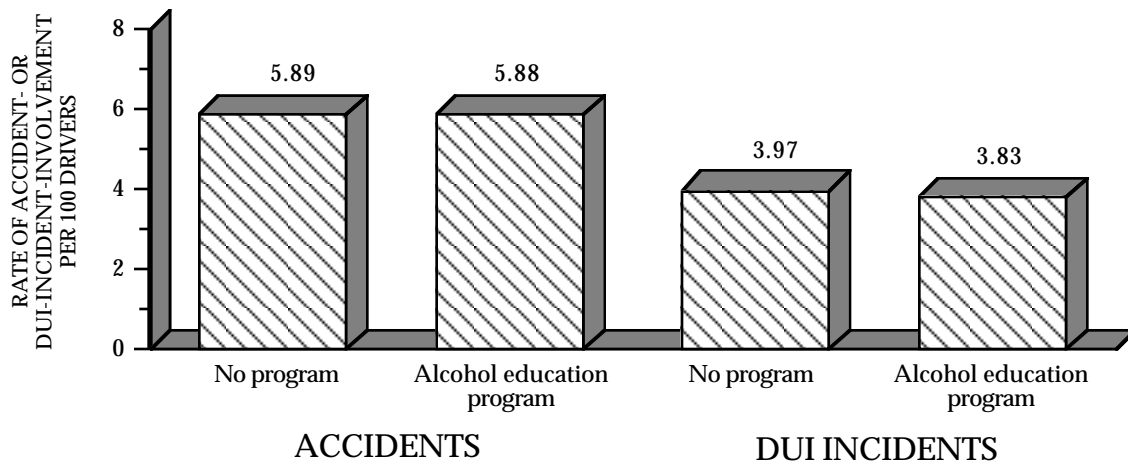

Figure 9a. Adjusted 1-year accident and DUI incident rates of 2000-2001 (fiscal year) alcohol reckless drivers by type of sanction.

Figure 9b. Adjusted 1-year accident and DUI incident rates of first offender drivers (arrested in year 2000) by length of alcohol education program.

Based on the data represented in Figures 10a and 10b, which address total accidents as well as DUI-related incidents, the following conclusions can be drawn about second-offender sanctions:

- Consistent with ten previous DUI-MIS reports, but contrary to earlier California studies, including the first annual DUI-MIS report (1989 offenders), second offenders suspended in 2000 do not have statistically significant lower total accident rates than do those offenders assigned to SB 38 treatment programs during the first

year following suspension or SB 38 assignment. This finding is probably due to the implementation of administrative per se license suspensions beginning in July, 1990, whereby all second offenders are suspended for one year. However, for the longer 3-year follow-up period, the 1998 suspended group had significantly lower total accident rates than those of the SB 38 and “other” second offenders.

- ▶ In 1998-2000, second offenders who were suspended had statistically significantly higher proportions of DUI incidents in the subsequent 3-year and 1-year periods (respectively) than did those who received the SB 38 program and license restriction sanction. The percentage increases associated with the license suspension group, relative to the SB 38 program license restriction group, for the two years (1998 and 2000) were 20.6% and 29.9%, respectively.

Figure 10a. Adjusted 3-year accident and DUI incident rates of 1998 second offenders by type of sanction.

Figure 10b. Adjusted 1-year accident and DUI incident rates of 2000 second offenders by type of sanction.

- ▶ Similar to findings of previous evaluations, the 2000 SB 38 program/restriction sanction group had significantly lower 1-year subsequent DUI incident rates than those of the suspended and “other” second offender groups. Similar to last year’s evaluation, the recidivism rate of the ignition interlock group was not significantly different than the rate of the SB 38 group without ignition interlock; however, in the 3-year follow-up period of the 1998 analysis, the rate of the ignition interlock group was significantly lower than the rate of the SB 38 group.

EVALUATION METHODS AND RESULTS

Subject Selection and Data Collection

Convicted DUI and alcohol-related reckless offenders were identified from monthly abstract update tapes which contain all DUI conviction data reported to DMV by the courts. In the present study, follow-up data for first and second DUI offenders were compiled from ten previous and current DUI-MIS evaluations. Additional follow-up data for the following groups were evaluated for sanction effectiveness:

- 1) A 3-year follow-up period for convicted 1998 second offenders who were previously evaluated in the 2001 DUI-MIS report.
- 14 A 1-year follow-up period for convicted DUI second offenders who were arrested for DUI in 2000.
- 15 A 1-year follow-up period for convicted alcohol-related reckless offenders who were arrested from July, 2000 through June, 2001.
- 16 A 1-year follow-up period for convicted first offenders who were arrested for DUI in 2000, and who were referred to 3-month and 6-month alcohol education programs.

For each year's annual DUI-MIS report, an additional year of DUI data is added to the sanction analyses. In order to simplify the analyses and reporting of results, separate analyses of the 1989 through 1997, and 1999, DUI offenders were not included in this year's evaluation. Although in previous reports, results of the 3-year follow-up data from the 1993, 1994, 1995 and 1996 files were included, they are not reported this year because the results are somewhat outdated, and the 3-year follow-up data for the 1998 second offenders provides sufficient longer term results. An additional analysis was conducted in which the records of the 1998, 1999 and 2000 1-year follow-up period were combined to increase the size of the sanction groups for more power.

The conviction date in all cases was considered to be the “treatment date” for defining prior and subsequent driving record data, because the penalties and sanctions for the DUI offense are typically effective as of that date.

Since DUI penalties and sanctions are enhanced as a function of the number of prior DUI and alcohol-related reckless driving convictions within the previous seven years, subjects were selected based on the number of such convictions within the seven years prior to their entry DUI arrest in 2000. For this year’s report, subjects selected for evaluation were: 1) first-DUI offenders—drivers who had no DUI or alcohol-related reckless driving convictions within the previous seven years, 2) second-DUI offenders—drivers who had one DUI or alcohol-related reckless driving conviction

within the previous seven years, 3) alcohol-related reckless offenders with no previous DUI offenses in the past seven years, and 4) first-DUI offenders referred to 3-month and 6-month alcohol education programs. DUI offenders with felony convictions and chemical test refusal suspensions were not included because their license control penalties are more severe than those of the other second-offender groups. Also excluded were drivers who did not have a full one-year subsequent time period because of late conviction dates, drivers with "X" license numbers (meaning that no California license number could be found), and drivers with out-of-state ZIP Codes. Altogether, the excluded cases represented 17.8% of the original convicted-offender file.

Court sanctions are reported to, and recorded by, DMV in the form of disposition codes on the abstract of conviction. Prior to AB 762 (effective 7/1/99), a convicted DUI offender, especially a first offender, might receive any one of many combinations of individual sanctions, which include jail, fine, license restriction or suspension, alcohol treatment program, or probation. Therefore, in defining postconviction sanction combination groups for the purpose of all previous and current analyses (prior to 7/1/99), the following conventions were used for first offenders:

- 1) if suspension (non-APS) was one of the sanctions imposed by DMV or the court, then the offender was included in the suspension group;
- 2) if suspension (non-APS) was not imposed, but the offender was assigned to an alcohol treatment program, then the offender was included in one of the treatment groups, according to the type of treatment program (first offender or SB 38) and whether they were also sentenced to license restriction or jail; and
- 3) if neither suspension nor treatment was imposed, but the offender was sentenced to jail, then the offender was included in the jail-only group.

Fine and probation are generally imposed on most DUI and alcohol-reckless offenders (except that probation is not usually granted to court-suspended first offenders), and for that reason are not included as sanctions evaluated in this report. Also, since July 1990, virtually all DUI offenders have had their licenses administratively suspended upon DUI arrest, so only non-APS suspension was considered. Beginning July 1, 1999, under AB 762, courts may no longer discretionarily impose a six-month license suspension for first offenders under the probation option with the 48-hour jail term; this suspension is now mandatory. This means that last year's "jail-only" group now has its licenses suspended, and license restriction or suspension would be imposed on drivers in the program-jail group. These changes have become increasingly evident in this year's data as reflected in the diminished size of both the jail and program/jail groups, and an increased number of first offenders in the suspended group. For this reason, the very small "jail" group was not included, and the remaining program/jail group was merged in with the program participants. For the 1990-2000 overview analysis presented in this year's report, the three treatment program groups were combined into one group, and compared with suspended first offenders. In the evaluation of the length of time of first offender programs, only first offenders who showed the 3-month and 6-month designations on their conviction abstracts were identified and selected for this analysis. Unfortunately, there were many first offenders who were referred to the alcohol education programs that did not display the specific length of time, and were not included in this evaluation. Therefore, this analysis is limited to first offenders who were adjudicated by courts that were in compliance with the law.

A similar convention was used for grouping second offenders with various sanction combinations. The groups used in this analysis are: 1) (post-conviction) license suspension, 2) SB 38 treatment program plus license restriction, 3) a group of 1998 and 2000 second offenders ("other") who did not meet the selection criteria for groups 1 or 2 but were not ordered to install interlock, and 4) a group of 1998 and 2000 second offenders who were ordered to install an ignition interlock device in their vehicles as mandated by AB 2851 (implemented July 1993, but effectively abolished by AB 762, effective July 1999). This device requires that the offender blow into it prior to starting the vehicle, which will not start if he/she has a BAC above a specified level. The interlock group was identified by certain Vehicle Code designations on abstracts of conviction. In examining these abstract disposition codes, it was found that 82% of interlock cases were also referred to SB 38 treatment programs, while 98.5% had their licenses suspended (non-APS); of those that were suspended, 80.5% were assigned to SB 38 treatment programs and less than 2.7% were assigned to first-offender programs. All second offenders who were assigned to install interlock are included in this evaluation, irrespective of other sanctions and regardless of actual installation. This is reflective of the "real world" conditions under which interlock is assigned, which is an integral part of the total impact of this sanction.²

The group designated as "other" represents offenders who were originally referred to an SB 38 treatment program but were suspended as well, either by intent (court sentence to both treatment program and suspension), or omission (court misreporting of disposition codes and/or the offender's lack of compliance with required procedures, such as failure to provide proof of insurance, program enrollment, pay fees, etc.). Even if the courts amend the abstracts of conviction, the offenders still need to meet the insurance and program enrollment requirements. The final sanctions ultimately received by this group are unclear, which makes interpretation difficult. This difficulty is further exacerbated by strong self-selection biases, such as inability or unwillingness to obtain insurance, which make this group "different" from the others.

Two groups of the alcohol-related reckless convictees were identified including: 1) those who were assigned to an alcohol education program, and 2) those who were not assigned to a program. As previously noted for first and second DUI offenders, these sanctions are reported by the courts to DMV via disposition codes on the conviction abstracts. Although courts are mandated to require all alcohol-related reckless drivers to attend an alcohol education program as a condition of probation, it was found that 65% were assigned to the programs while 35% were not assigned. This discrepancy allowed us to compare subsequent accidents and DUI incidents between the two groups.

Prior driver record data were extracted for the 2 years preceding an offender's DUI conviction date. Appendix Tables B5 and B6 list the prior driver record variables for the second DUI offenders, the alcohol-related reckless offenders, and the 3-month and 6-month program participants, and these driving record variables were used as covariates in the analyses. The evaluation period for the postconviction driving measures, starting from the conviction date, was three years for the 1998 drivers, and one year for both the 2000 second offenders, alcohol-related reckless drivers, and the 3-

² It should be noted, however, that a 1993 policy directive from DMV to the courts originally requested that only offenders who had shown proof of installation be reported as assigned to interlock. To the extent that this directive was followed by the courts (and there is evidence that it was not), the present evaluation would be assessing only those cases where the device was actually installed. This DMV policy directive has since been corrected.

and 6-month first offender program participants. A buffer period of four months was allowed between the end of the evaluation period and the data extraction date to allow for processing and reporting of the most recent data to DMV. DUI offenders who had less than the full follow-up time period (from conviction date to the buffer period) were excluded. The outcome driver record measures consisted of the proportion of offenders who were involved in: 1) any accident, and 2) DUI incidents (alcohol-involved accidents, major convictions, APS/refusal suspensions, or DUI failures-to-appear).

Evaluation Design and Analytical Procedures

Logistic regression analysis was used to evaluate the differences in the proportion of accident- and DUI-incident-involved drivers in each sanction group at the end of the evaluation period. Only the first accident or DUI incident or "failure" was evaluated. This is not an important limitation with these data because the incidence of repeat failures (two or more accidents or DUI incidents) was very low over the study time window. More importantly, analysis of repeat failures would be subject to confounding by court sanctions received in connection with the first failure incident. This type of confounding is avoided because multiple incidents were not included in this analysis.

Since it was not possible to randomly assign drivers to the various sanction groups, potential biases due to preexisting group differences were statistically controlled to the extent possible by using biographical data, prior driving record data, and ZIP Code indices (accident and traffic conviction averages for each driver's ZIP Code area as covariates. All of the traffic conviction averages were used for the 2000 drivers, after the counts of major and moving violations were corrected, but were not used for the 1998 drivers because of an undercount. (Tables B5 and B6 show significant group differences on most of these variables.) While this "quasi-experimental" design is subject to a number of limitations in assessing cause-effect relationships, the attempt at statistical control of group differences removes at least part of the bias in group assignment and provides a more precise estimate of the relationship between type of sanction and subsequent record. It is likely, of course, that the groups also differ on characteristics not measured by, or reflected in, the covariates. The possibility of uncontrolled biases becomes particularly problematic if sanctions are commonly received by atypical offenders through self- or judicial-selectivity (e.g., drivers of higher socio-economic status may be more likely to receive program with restriction and less likely to receive jail than those of lower status).

In all of the second offender analyses and for accidents and DUI incidents, one or two statistically significant ($p < .01$) covariate by sanction interactions were evident in the 2000 analysis. (Statistical significance at $p < .0x$ means that a differential effect between groups would occur by chance less than $x\%$ of the time.) These significant interactions indicated that the relationship between the covariates and the outcome measure (DUI incidents) varied across sanction groups. The interaction effects were examined and found not to impact the sanction main effect. There were no interaction effects found in the analyses involving the alcohol-related reckless drivers nor the 3-month and 6-month program participants.

One-Year Recidivism Rates for First and Second Offenders, by Sanctions, from 1990-2000

The one-year subsequent DUI-incident reoffense rates for both first- and second-offender sanction groups were compiled from the ten previous and current annual DUI-MIS evaluations and configured onto two separate graphs to display these rates over time. Figures 7a and 7b show the proportions of first- and second-offender

sanction groups, respectively, arrested between 1990 and 2000 who reoffended within one year after conviction. As discussed above, the reoffense rates of these sanction groups were statistically adjusted for group differences related to available covariates. The DUI incidents include alcohol-involved accidents, major convictions (primarily DUI, reckless driving, and hit-and-run), APS (0.08% BAC or chemical test refusal) suspensions and DUI failure-to-appear notices (FTA).

Figure 7a and Table 14a show an ongoing decline in the 1-year recidivism rates for the two first-offender sanction groups from 1990 to 1999, but then reveals an upward trend in 2000 for both groups. As noted earlier, the graphs and tables do not include the "jail" group any longer because this group has diminished considerably in size due to increased court compliance with the law imposing license actions (suspension or restriction) on all first offenders. The overall decline translates into a 29.6% reduction in recidivism for the suspension group, and a 14.3% decrease for the alcohol treatment group compared to the rates of 1990. The recidivism rates of the suspended and alcohol program groups continue to appear quite similar, but the decline over time for the suspended group is actually greater (29.6%) than for the alcohol treatment group (14.3%). In the earlier years, the combined alcohol-treatment group exhibited lower reoffense rates than did the suspended group, possibly due to the initial impact of APS suspensions on a group that had previously avoided license suspension. However, midway in 1994, the rates of the two groups merge and the downward trend of both groups diminishes. Over the last four years, the suspended group's rate oscillates, but basically shows a leveling of its rate. In 2000, the rates for both groups reflect a sharp upward trend (the two groups together comprise about 98% of first offenders.) This upward trend is puzzling, considering that the DUI arrest rate for 2001 decreased by 2.7%.

TABLE 14a: ONE-YEAR PERCENTAGES OF DUI-INCIDENT-INVOLVED FIRST AND SECOND OFFENDERS, BY TYPE OF SANCTION, 1990-2000

| YEAR | FIRST-DUI OFFENDERS | | SECOND-DUI OFFENDERS | | | |
|------------------------|---------------------|----------------------|----------------------|------------------|--------------------|--------|
| | SUSPENDED | 1ST OFFENDER PROGRAM | SUSPENDED | SB 38 RESTRICTED | IGNITION INTERLOCK | OTHER |
| 1990* | 7.90 | 6.78 | 11.47 | 7.96 | 0 | 9.30 |
| 1991 | 8.20 | 6.48 | 11.53 | 7.89 | 0 | 9.68 |
| 1992 | 7.69 | 5.88 | 10.86 | 7.40 | 0 | 9.67 |
| 1993 | 6.40 | 5.50 | 10.48 | 6.62 | 5.95 | 8.62 |
| 1994 | 4.78 | 5.05 | 8.27 | 5.90 | 5.60 | 7.24 |
| 1995 | 5.70 | 5.31 | 9.34 | 5.90 | 5.78 | 6.84 |
| 1996 | 4.36 | 4.76 | 7.86 | 5.31 | 4.50 | 6.28 |
| 1997 | 5.18 | 4.92 | 7.56 | 5.06 | 5.10 | 6.03 |
| 1998 | 4.15 | 5.18 | 7.68 | 5.29 | 4.50 | 6.59 |
| 1999 | 4.47 | 4.89 | 7.37 | 5.10 | 4.24 | 6.61 |
| 2000 | 5.56 | 5.81 | 7.16 | 5.51 | 6.02 | 5.66 |
| % DIFFERENCE 1990-2000 | -29.6% | -14.3% | -37.6% | -30.8% | NA | -39.1% |

*All 1990 percentages were revised.

A similar overall decline is evident in the 1-year reoffense rates for the second-offender groups as displayed in Figure 7b and Table 14a, but the rate of decline is virtually the same for all groups until 1998. From 1996 to 1998, the recidivism rates flattened, declined slightly in 1999, and then in 2000, the rates of the SB 38 and ignition interlock groups rise noticeably, while the rates of the suspended and “other” group decrease. Table 14a shows that, from 1990 to 2000, the reoffense rates decreased 30.8% for the SB 38 group, 37.6% for the suspended group, and 39.1% for the “other” group. Obviously, a rate change over the 1990 to 2000 time period is not available for the ignition interlock group since this sanction was rarely applied to second offenders before 1993; the overall reoffense rate for this group is slightly lower than that of the SB 38 program group, but increases noticeably in 2000. The differences in rates between second-offender sanction groups remain relatively steady across the years and, like those for first offenders, may reflect uncontrolled self- or judicial-selection group differences. This is particularly likely for the ignition interlock group, given the cost of installing and maintaining the device. Previous DUI-MIS reports have suggested that, while many factors may be associated with the overall decline in DUI incidents for both first and second offenders, the reduction is probably attributable to the implementation of APS suspensions in 1990. An evaluation (Rogers, 1997) of the California APS Law, in fact, documents recidivism reductions of up to 21.1% for first offenders and 19.5% for repeat offenders which are attributable to the law.

One-Year Accident Rates for First and Second Offenders, by Sanctions, from 1990-2000: The 1-year subsequent accident rates for both first and second offenders were also compiled from previous and current DUI-MIS evaluations and graphically displayed over time, just as the subsequent DUI-incident reoffense rates were portrayed. Figures 8a and 8b show the proportions of 1990-2000 first and second offenders who had accidents within one year after their conviction. Statistical adjustments for group differences were made on these accident rates based on available covariates.

TABLE 14b: ONE-YEAR PERCENTAGES OF ACCIDENT-INVOLVED FIRST AND SECOND OFFENDERS, BY TYPE OF SANCTION, 1990-2000

| YEAR | FIRST-DUI OFFENDERS | | SECOND-DUI OFFENDERS | | | |
|------------------------|---------------------|----------------------|----------------------|------------------|--------------------|--------|
| | SUSPENDED | 1ST OFFENDER PROGRAM | SUSPENDED | SB 38 RESTRICTED | IGNITION INTERLOCK | OTHER |
| 1990 | 4.27 | 5.09 | 3.82 | 3.78 | 0.00 | 3.97 |
| 1991 | 4.17 | 4.64 | 3.51 | 3.60 | 0.00 | 3.57 |
| 1992 | 3.51 | 4.36 | 3.70 | 3.33 | 0.00 | 3.52 |
| 1993 | 3.60 | 4.47 | 3.84 | 3.23 | 3.01 | 3.77 |
| 1994 | 3.52 | 4.36 | 3.24 | 2.82 | 2.85 | 3.32 |
| 1995 | 3.13 | 4.53 | 3.08 | 2.82 | 2.62 | 3.14 |
| 1996 | 2.73 | 4.42 | 2.38 | 2.42 | 2.56 | 2.31 |
| 1997 | 3.09 | 4.69 | 2.70 | 2.50 | 2.51 | 2.90 |
| 1998 | 2.80 | 4.82 | 3.09 | 2.51 | 2.12 | 2.76 |
| 1999 | 4.34 | 5.08 | 3.10 | 2.54 | 2.25 | 2.84 |
| 2000 | 4.45 | 5.17 | 3.56 | 3.15 | 2.47 | 2.79 |
| % DIFFERENCE 1990-2000 | +4.2% | +1.6% | -6.8% | -16.7% | NA | -29.7% |

Among first offenders from 1990 through 2000, Figure 8a and Table 14b show a much flatter decline in accident rates overall than was evident among the reoffense rates.

Although the accident rate of the suspended group showed the largest decline during the first seven years, surprisingly, its rate increased in 1999 and more so in 2000 to a level higher than that of the 1990 group (+3.0%, +4.2%, respectively). This change may well be related to the law change (AB 762) previously discussed, which altered the judicial sanction structure for first offenders; under the new law, more first offenders are being suspended. Similarly, the accident rate of the first offender program participants also increased in 1999 and slightly more in 2000 to a higher rate than that of 1990 (+1.6%); their accident rate has continued to increase gradually since 1996. Although all groups were suspended/restricted under APS, differences in accident rates probably reflect uncontrolled self- or judicial-selection group differences.

Figure 8b indicates a declining trend in the overall accident rate of second offenders up to 1996. Following a dip in accidents in 1996, the accident rates of three groups increased in 1997, then leveled out by 1999, and increased in 2000. Compared to 1990, the SB 38/restricted group has a 16.7% drop in accidents, while the suspended group had a 6.8% reduction in accidents. The "other" group shows a 29.7% drop in their accident rate from 1990 to 2000. The ignition interlock group displays a consistent decline in accidents since 1993, followed by a greater decline from 1997 to 1998. However, the accident rate for that group increased slightly in 1999 and again in 2000. Overall, second offenders have lower accident rates than do first offenders (Table 14b), and this fact has been well documented in past evaluations; it has been speculated that the lower accident rate of second offenders may be related to the longer-term (one to two years) license (restriction/suspension) actions imposed on second offenders.

Results of the Alcohol-Related Reckless Program Evaluation

Total Accidents: Figure 9a and Table 15a display the results of the second evaluation of the effectiveness of the alcohol education program upon drivers convicted of alcohol-related reckless driving violations. Like last year, the results show that assignment to the alcohol education program does not have a significant effect on the 1-year subsequent accident rates of alcohol-related reckless offenders. The program participants have only a .2% lower accident rate than that of the non-participants. Comparing these rates to those of the 2000 first DUI offenders, it is evident that the alcohol-related reckless drivers are more involved in accidents (5.89, 5.88 per 100 drivers) than are first offenders (4.45, 5.17). The lack of license suspension/restriction for the alcohol-related reckless drivers might explain the higher accident rates. Past studies have documented the effectiveness of license suspension on accident reduction.

TABLE 15a: ALCOHOL-RELATED RECKLESS SANCTION EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

| YEAR | SANCTION GROUP | SAMPLE SIZE | NUMBER OF ACCIDENT-INVOLVED, PER 100 DRIVERS | PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{GRP 1 - GRP 2}{GRP 2} \times 100$ | NUMBER OF DUI INCIDENT-INVOLVED, PER 100 DRIVERS | PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{GRP 1 - GRP 2}{GRP 2} \times 100$ |
|-----------------------------|------------------------------|-------------|--|--|--|--|
| | | | | | | |
| 7/2000-6/2001 | 1) No program | (2,919) | 5.89 | | 3.97 | |
| (follow-up period = 1 year) | 2) Alcohol-education program | (5,515) | 5.88 | .2% | 3.83 | 3.7% |

DUI Incidents: Similar to the accident findings, Figure 9a and Table 15a indicate that program participants do not have significantly fewer DUI incidents in the one year following their assignment to the alcohol-education programs. This finding contrasts with last year's results, in which the DUI incident rate of the program participants was significantly lower than that of the nonparticipants. The reoffense rate of the program participants is only 3.7% lower than that of alcohol-reckless offenders not assigned to the programs. Because random assignment to program attendance was not possible, there still remains the possibility of uncontrolled biases through self- or judicial-selectivity, even though statistical control of group differences removed part of the biases based on available covariates.

Results of the 3-Month and 6-Month Alcohol Program Evaluation

Total Accidents: Figure 9b and Table 15b display the results of the first evaluation of the effectiveness of the alcohol education program upon first DUI offenders assigned to 3-month versus 6-month programs. The results show that the time length of the alcohol education program does not have a significant effect on the 1-year subsequent accident rates of first DUI offenders. The 6-month program participants have only a 3.6% lower accident rate than that of the 3-month participants. Again, comparing these rates to those of the alcohol-related reckless drivers, it is evident that the alcohol-related reckless drivers are more involved in accidents (5.89, 5.88 per 100 drivers) than are first offenders (4.93, 4.76). The short-term APS license suspension/restriction for all first offenders might explain their lower accident rates. Past studies have supported the effectiveness of license suspension on accident reduction.

TABLE 15b: FIRST OFFENDER 3-MONTH AND 6-MONTH ALCOHOL PROGRAM EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

| YEAR | SANCTION GROUP | SAMPLE SIZE | NUMBER OF ACCIDENT-INVOLVED, PER 100 DRIVERS | PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{GRP 1 - GRP 2}{GRP 2} \times 100$ | NUMBER OF DUI INCIDENT-INVOLVED, PER 100 DRIVERS | PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{GRP 1 - GRP 2}{GRP 2} \times 100$ |
|-----------------------------|---------------------|-------------|--|--|--|--|
| 2000 | 1) 3- month program | (17,153) | 4.93 | | 4.11 | |
| (follow-up period = 1 year) | 2) 6-month program | (5,209) | 4.76 | 3.6% | 6.04 | -32.0%* |

* $p = .0001$

DUI Incidents: In contrast to the accident findings, Figure 9b and Table 15b indicate that the 3-month program participants have significantly ($p = .0001$) fewer DUI incidents in the one year following their assignment to the alcohol-education programs than do the 6-month program participants. The reoffense rate of the 3-month program participants is 32.0% lower than that of the 6-month participants. This finding is not surprising given that those assigned to the longer term program have higher BAC levels (.20% and above), and would be more likely to recidivate than those with lower BAC levels. Since this study only selected first offenders whose conviction abstract had information on the length of alcohol program, there are likely unknown biases that this quasi-experimental design cannot rule out. However, some statistical control of group differences removed part of the biases based on available covariates.

Results of the Second-Offender Sanction Evaluation

Total Accidents: Results from the 2000 1-year analyses (see Figures 10a and 10b, Tables 15c and 16) were different from those of the previous 1990-1997, and 1999 1-year analyses (in earlier DUI-MIS reports), in that one significant difference on total accidents was evident among the second offender sanction groups. The accident rate of the ignition interlock group was significantly lower than that of the suspended group, while all of the other group comparisons were not significantly different. However, in most of the previous 1-year analyses, significant differences in accident rates were not evident between sanction groups. Overall, since 1990, the accident rates of all the groups have been declining, but within the last several years, the suspended group's accident rate increased and then flattened in 1999, and increased again in 2000. The accident rates of the SB 38 treatment/restriction group and ignition interlock group have been increasing since 1998, while the rate of the "other" group was the only one that decreased in 2000. Reasons for the increase in accidents among the three groups are still not clear but the possibility of changes in group composition since 1999 may be a contributing factor. Since 1999, all second offenders are suspended upon conviction, and if given the restriction sanction by the court, they must fulfill the necessary requirements to obtain a restricted license at DMV subsequent to the initial suspension. The size of both the SB 38 and ignition interlock groups has been diminishing in the past two years, while the size of the suspended and "other" groups has increased.

TABLE 15c: SECOND-OFFENDER SANCTION EFFECTS ON TOTAL ACCIDENTS AND DUI INCIDENTS BY YEAR

| YEAR | SANCTION GROUP | SAMPLE SIZE | NUMBER OF ACCIDENT-INVOLVED, PER 100 DRIVERS | PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) | NUMBER OF DUI INCIDENT-INVOLVED, PER 100 DRIVERS | PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) |
|---|--|-------------|--|---|--|---|
| | | | | $\frac{\text{GRP 1} - \text{GRP 2}}{\text{GRP 2}} \times 100$ | | $\frac{\text{GRP 1} - \text{GRP 2}}{\text{GRP 2}} \times 100$ |
| 1998 (follow-up period = 3 years) | 1) Suspension | (3,567) | 7.63 | | 17.14 | |
| | 2) SB 38 program & license restriction | (6,213) | 10.42 | -26.8% | 14.21 | 20.6% |
| | 3) SB 38 program & interlock | (5,940) | 7.60 | | 11.99 | |
| | 4) Other | (6,916) | 9.76 | | 16.38 | |
| 2000 (follow-up period = 1 year) | 1) Suspension | (3,949) | 3.56 | | 7.16 | |
| | 2) SB 38 program & license restriction | (4,628) | 3.15 | 13.0% | 5.51 | 29.9% |
| | 3) SB 38 program & interlock | (1,579) | 2.47 | | 6.02 | |
| | 4) Other | (11,520) | 2.79 | | 5.66 | |
| 1997, 1998, 1999, & 2000 (follow-up period = 1 year) | 1) Suspension | (15,279) | 3.11 | | 7.48 | |
| | 2) SB 38 program & license restriction | (23,850) | 2.68 | 16.0% | 5.25 | 42.5% |
| | 3) SB 38 program & interlock | (16,799) | 2.34 | | 4.80 | |
| | 4) Other | (34,491) | 2.82 | | 6.20 | |

However, the evaluations of the 3-year follow-up periods show different results from those of the 1-year time periods. Similar to the 1994, 1995, 1996, and 1997 3-year follow-up evaluations of the last four reports, but in contrast to the 1992 and 1993 3-year analyses, significant ($p = .0001$) sanction group differences on accident rates were evident among the 1998 second offenders. In fact, the results were identical to last year's findings. The accident rate of the suspended group continues to be significantly

lower than that of the SB 38 and “other “ groups (but not significantly lower than the rate of the ignition interlock group), suggesting that over a longer period of time (3 years), post-conviction suspension (of 18 months to 2 years duration) has a greater impact in reducing accidents than do other sanctions. Like last year’s findings, the accident rate of the ignition interlock group was significantly lower than that of the SB 38 program group and “other” group.

In order to increase the power of the statistical analysis for detecting the effects of the interlock sanction, an additional analysis was conducted in which the 1997, 1998, 1999, and 2000 1-year second-offender files were combined. Results from this analysis are shown in Tables 15c and 16. Differences in accident rates between sanctions were statistically significant ($p = .001$). The accident rate of the ignition interlock group was significantly lower than those of the suspension, the SB 38, and the “other” groups, while the rate of the SB 38 program participants was significantly better than that of the suspended group.

TABLE 16: SUMMARY OF SIGNIFICANT RESULTS FOR SECOND-OFFENDER SANCTION GROUPS BY OUTCOME MEASURES

| YEAR GROUP | SECOND-OFFENDER | | | | | | | |
|---|-----------------|-----|-----|-----|---------------|-----|-----|-----|
| | TOTAL ACCIDENTS | | | | DUI INCIDENTS | | | |
| | (1) | (2) | (3) | (4) | (1) | (2) | (3) | (4) |
| <u>1998 (3-year follow-up)</u> | | | | | | | | |
| (1) Suspension | na | S1 | ns | S1 | na | S2 | S3 | ns |
| (2) SB 38 program & restriction | | na | S3 | ns | | na | S3 | S2 |
| (3) SB 38 program & interlock | | | na | S3 | | | na | S3 |
| (4) Other | | | | na | | | | na |
| <u>2000 (1-year follow-up)</u> | | | | | | | | |
| (1) Suspension | na | ns | S3 | ns | na | S2 | ns | S4 |
| (2) SB 38 program & restriction | | na | ns | ns | | na | ns | ns |
| (3) SB 38 program & interlock | | | na | ns | | | na | ns |
| (4) Other | | | | na | | | | na |
| <u>1997, 1998, 1999, & 2000 (1-yr. follow-up)</u> | | | | | | | | |
| (1) Suspension | na | S2 | S3 | ns | na | S2 | S3 | S4 |
| (2) SB 38 program & restriction | | na | S3 | ns | | na | ns | S2 |
| (3) SB 38 program & interlock | | | na | S3 | | | na | S3 |
| (4) Other | | | | na | | | | na |

Note: A significant ($p < .06$ for 2nd offenders) difference between sanction groups relative to the percentages of accident-involved or DUI incident-involved drivers is represented by an "S." The group number with the "S" indicates the group with the better (lower) rate. A nonsignificant difference is indicated by "ns." "Na" means not applicable. Blanks appear in the lower half of each matrix, since the halves are identical.

DUI Incidents: Figures 10a and 10b and Tables 15c and 16 show that in both years the suspended groups had significantly higher DUI incident rates (by 20.6% and 29.9% for 1998 and 2000, respectively) than corresponding rates for the SB 38 program/restricted participants. Like last year, the “other” group in the 1998 and 2000 analyses had reoffense rates midway between the suspended group and SB 38 program/restricted group. Replicating last year’s findings, reoffense rates of all four groups in 1998 (3-year follow-up period) were significantly different from each other; unlike the 1997 results, the 1998 recidivism rate of the interlock group was significantly lower than that of the SB 38 group. Over time, it appears that significant differences in the rates of the interlock group and SB 38 group have not been consistent, varying from year to year. However, there has been consistency in the finding of the 3-year recidivism rates of the

SB 38 group and the interlock group being significantly lower than that of the suspension group.

Similar to previous 1-year analyses, the recidivism rate of the 2000 interlock group was not significantly lower than that of all three groups, but the SB 38 and “other” groups had rates that were significantly lower than that of the suspended group.

In summary, findings from the 2000 second-offender analyses were generally quite similar to previous post-APS 1-year evaluations of second offenders in showing little evidence of significant differences between the sanction groups on subsequent total accident rates; the one exception this year was that accident rate of the ignition interlock group was significantly lower than that of the SB 38 group. Similar to last year’s findings from the 3-year accident analyses, the 3-year accident rate of the 1998 suspended group was significantly lower than those of two groups. The fact that the 3-year accident rate is still among the lowest could reflect the ongoing impact of the longer term suspensions required of second offenders.

The results on DUI reoffense rates for second offenders continue to be consistent with the findings of prior studies on alcohol-related incidents, indicating that SB 38 programs with license restriction and with interlock are associated with a reduction in subsequent DUI incidents over both the 3-year and 1-year (combined) follow-up periods.

SECTION 5: ADMINISTRATIVE ACTIONS

Data on DMV administrative license disqualification actions (license suspension or revocation [S/R]) taken in DUI cases are presented below. These statutorily mandated actions, which are taken in cases of alcohol-impaired driving, are initiated by the receipt of either a law enforcement APS report (.08% BAC, zero tolerance, or chemical test refusal) or court abstract of conviction. It should be noted that multiple actions can result from a single DUI incident—for example, a single DUI arrest frequently will result in both an APS suspension and a (later) mandatory postconviction suspension action. This section includes the following tables and figure:

Table 17: Mandatory DUI License Disqualification Actions, 1991-2001. This table shows preconviction (APS) and postconviction license disqualification totals from 1991 through 2001. The postconviction totals include juvenile suspensions, first-offender suspensions, second-offender suspensions and revocations, and third- and fourth-offender revocations.

Table 18: Administrative Per Se Process Measures. This table presents APS process measure data for fiscal years 99/00 through 01/02.

Figure 11: Mandatory DUI License Disqualification Actions, 1991-2001. This figure graphically portrays mandatory DUI license disqualification totals from 1991 through 2001, both preconviction and postconviction.

The following statements are based on the data shown in Tables 17-18 and Figure 11.

- During 1991, the first full calendar year of APS license suspension, the total number of DMV DUI preconviction and postconviction S/R actions increased by 60% over that for 1990. These totals declined each subsequent year through 1995, and have

fluctuated up and down each year since 1995. After a 1.9% increase in 2000, S/R actions decreased by 3.9% in 2001.

- ▶ In 2001, 164,840 APS license actions were taken. Of these actions, 77.8% were first-offender actions and 22.2% were repeat-offender actions.
- ▶ In FY 01/02, APS actions decreased by 1.0%, following a 3.5% decrease the previous fiscal year.
- ▶ Chemical test refusal actions have declined each year since 1991, and dropped by 6.3% in 2001. The total number of refusal actions has fallen 58.5% from the 1991 totals.
- ▶ The number of mandatory postconviction license actions decreased by 2.4% in 2001, following a 19.7% increase in 2000. Overall, mandatory postconviction license actions have declined by 34.2% since 1991.
- ▶ In the 12 years since APS was implemented in July 1990, almost two and a half million (2,481,811) APS suspension or revocation actions had been taken.
- ▶ Requests for APS hearings have increased from 7.1% of all APS actions in FY 90/91 to 22.0% in 01/02. The rate at which APS suspension/revocation actions are upheld after hearing has declined the past several years, and stood at 83.2% upheld in FY 01/02.
- ▶ During the first 8.5 years after implementation (on January 1, 1994) of the "zero tolerance" law for minors, 120,356 suspension actions have been taken.

Figure 11. Mandatory DUI license disqualification actions, 1991-2001.

TABLE 17: MANDATORY DUI LICENSE DISQUALIFICATION ACTIONS, 1991-2001

| | YEAR | | | | | | | | | | |
|---|--------------------|--------------------|---------------|---------------|---------------------------|---------------------------|--------------------------|--------------------------|---------------|---------------|---------------|

| Net total .01 refusal actions | 284 | 275 | 281 |
| Chemical test refusal rate (excluding actions later set aside) | 5.31% | 5.22% | 5.13% |
| Net .08 APS refusal (suspension) actions for subjects with no prior DUIs | 5,941 | 5,598 | 5,530 |
| Net .08 APS refusal (revocation) actions for subjects with prior DUIs | 3,403 | 3,155 | 2,944 |
| APS Hearings⁶ | | | |
| Total .08 and .01 inperson or telephone APS hearings scheduled | 41,616 | 39,959 | 40,035 |
| Percentage of total APS actions resulting in a scheduled hearing ⁷ | 21.8% | 21.7% | 22.0% |
| .08 hearings held and/or completed | 36,286 | 35,408 | 35,115 |
| .08 actions sustained or upheld following a hearing | 32,040 | 30,618 | 29,222 |
| Percentage of .08 APS actions sustained/upheld following a hearing | 88.3% | 86.5% | 83.2% |
| .01 hearings held and/or completed | 3,162 | 3,183 | 3,192 |
| .01 actions sustained or upheld following a hearing | 2,760 | 2,698 | 2,519 |
| Percentage of .01 APS actions sustained/upheld following a hearing | 87.3% | 84.8% | 78.9% |
| APS Chemical Test Refusal Hearings | | | |
| Total .08 and .01 APS refusal hearings scheduled | 2,713 | 2,873 | 2,772 |
| .08 APS refusal hearings held and/or completed | 2,542 | 2,714 | 2,563 |
| .08 APS refusal actions sustained or upheld following a hearing | 2,093 | 2,202 | 2,024 |

¹.08 refers to APS actions taken subsequent to obtaining evidence of a BAC equal to or in excess of the .08% per se level or on the basis of a chemical test refusal. Such an action is taken in conjunction with a DUI arrest.

².01 refers to APS suspensions taken against drivers under the age of 21 with BACs in excess of .01%, or on the basis of a chemical test refusal, and are not necessarily taken in conjunction with a DUI arrest.

³All entries in this category exclude actions later set aside but, where possible, include actions taken on the basis of either a chemical test refusal or a BAC test result.

⁴Prior DUI convictions or APS actions consist of any such conviction or action where the violation occurred within seven years prior to the current violation.

⁵This restriction allows driving to, from, and during the course-of-employment (enacted 1/1/95).

⁶These figures include refusal hearings but exclude Driver Safety/Investigation hearings, subsequent APS dismissal hearings and departmental reviews.

⁷Both numerator and denominator include those actions later set aside as a result of the hearing.

SECTION 6: ACCIDENTS INVOLVING ALCOHOL

This section presents data on alcohol-involved accidents, as compiled and reported by the California Highway Patrol, as well as accident data which have been crosstabulated with Department of Justice DUI arrest data. Only accidents involving injury or fatality are assessed, due to incomplete reporting of property-damage-only (PDO) accidents.³ Drivers identified as being under the influence of drugs other than alcohol are also included in the "alcohol-involved accident" category, but typically comprise less than 1% of the total (e.g., only 3 cases for 1994 data). This section includes the following tables:

Table 19: Fatal/Injury Accidents of 2000 DUI Arrestees by Race/Ethnicity and Sobriety Code. This table shows the law enforcement officer's determination of sobriety for accident-involved 2000 DUI arrestees, by race/ethnicity.

Table 20: Fatal/Injury Accidents of 2000 DUI Arrestees by Race/Ethnicity and Type of Arrest. This table portrays the fatal/injury accident involvement of DUI arrestees, by race/ethnicity and type of arrest (felony, juvenile, or misdemeanor).

Table 21: Fatal/Injury Accidents of 2000 DUI Arrestees by Adjudication Status and Sobriety Code. This table crosstabulates accident sobriety codes (from law enforcement accident reports) with the court disposition of the 2000 DUI arrests associated with those accidents.

Table 22: Fatal/Injury Accidents of 2000 DUI Arrestees by Adjudication Status and Type of Arrest. This table displays the adjudication status of fatal and injury accident-involved 2000 DUI arrestees, by type of arrest.

Table 23: 2000 Accident-Involved DUI Arrestees With No Record of Conviction, by County and Type of Arrest. This table shows the number of accident-involved 2000 DUI arrestees without a corresponding recorded conviction, by type of DUI arrest, by county.

Tables 24a-24b: 2000 Alcohol-Involved Fatal/Injury Accidents by Age and Sex (Total and Not Arrested). These two tables show the number of 2000 alcohol-involved fatal and injury accidents by age and sex, both total (24a) and those of subjects who were not arrested in conjunction with the accident (24b).

Tables 25a-25b: Sobriety Level by Prior DUI Convictions of 2000 Alcohol-Involved Fatal/Injury Accidents (Total and Not Arrested). These two tables show the number of 2000 alcohol-involved fatal and injury accidents by sobriety level and prior conviction

³Among 2000 DUI arrests, 24,859 were associated with a reported traffic accident, with 10,953 involving an injury or fatality, and 13,906 are PDO.

status, both total (25a) and those of subjects who were not arrested in conjunction with the accident (25b).

Tables 26a-26b: 2000 Alcohol-Involved Fatal/Injury Accidents by Prior DUI Convictions (Total and Not Arrested). These two tables show the number of 2000 alcohol-involved fatal and injury accidents by number of prior convictions, both total (26a) and for subjects who were not arrested in conjunction with the accident (26b).

Table 27: 1-, 3-, and 5-Year Total, Fatal/Injury, and Alcohol-Related Accident Means by Offender Status. This table shows the average number of total, fatal/injury, and alcohol-related accidents for 2000, 1998, and 1996 DUI arrestees for time periods of respectively, 1, 3, and 5 years subsequent to their arrests by offender status (number of prior offenses).

Figure 12 (below) shows the annual percentages of traffic injuries and fatalities that were alcohol-involved from 1991 to 2001. The numerical data for this graph are shown on the DUI summary statistics sheet at the beginning of this report.

Figure 12. Percentage of total injuries and total fatalities that were alcohol-involved, 1991-2001.

Based on these data, the following statements can be made:

- ▶ The number of alcohol-involved traffic fatalities increased by 6.1% in 2001, following increases of 5.4% in 2000 and 9.1% in 1999, which had been the first increase in over a decade. The proportion of traffic fatalities which are alcohol-involved also increased (to 33.3%) for the fourth year in a row after over a decade of decreases.

- ▶ The proportion of traffic accident injuries that are alcohol-involved increased in 2001, the first annual increase since 1987. The actual number of alcohol-involved injuries rose for only the second time in 16 years.
- ▶ 13.5% of all 2000 DUI arrests were associated with a reported traffic accident, compared to 12.5% in 1999, 12.8% in 1998, 12.3% in 1997, 12.6% in 1996, 12.4% in 1995, 13.2% in 1994, 13.1% in 1993, and 11.1% in 1992 and 1991. 44.1% of these accidents involved an injury or fatality.
- ▶ In almost a quarter (21.8%) of cases where a DUI offender was arrested in connection with a fatal/injury traffic accident, there is no record of any corresponding conviction. In 87.6% of these nonconvicted cases, the accident report indicated that the drivers had been drinking and that their ability was impaired.
- ▶ Of all 2000 fatal/injury accident-involved DUI arrestees with no record of conviction, 22.0% had been arrested for felony DUI.
- ▶ 6.0% (10,953) of 2000 DUI arrests were associated with a fatal or injury accident. Of these fatal/injury accidents, only 32.1% (3,516) led to an arrest for felony DUI, and only 12.2% (1,334) led to a conviction of felony DUI. 78.2% of DUI arrests stemming from a fatal/injury accident resulted in a reported conviction.
- ▶ The fatal/injury and total accident risk of DUI offenders generally decreases with the number of prior DUI convictions for periods up to five years after arrest, while, conversely, the risk of involvement in an alcohol-related accident generally increases with number of priors over the same time periods. This is not surprising because as the number of prior DUIs increases, the time period of the suspension/revocation lengthens, and prior research has demonstrated that suspension/revocation has a larger impact on reducing non-DUI accidents than DUI accidents. In addition, drivers with multiple DUI offenses are more likely to have serious drinking problems.
- ▶ Non-arrested drivers in alcohol-involved fatal/injury accidents in 2000 were less likely to have a prior conviction for DUI or alcohol-related reckless driving, and had lower estimated BAC levels than did drivers who were arrested in conjunction with the accident.
- ▶ Almost three-quarters (74.3%) of drivers in alcohol-involved fatal accidents had no prior DUI or reckless driving conviction.

TABLE 19: FATAL/INJURY ACCIDENTS OF 2000 DUI ARRESTEES BY RACE/ETHNICITY AND SOBRIETY CODE*

| SOBRIETY CODE | TOTAL | | RACE/ETHNICITY (100%) | | | | | | | |

DATA SOURCES AND LIMITATIONS

DUI Arrest Data:

Arrest data are reported to the Department of Justice (DOJ), Law Enforcement Information Center, by individual law enforcement agencies throughout the state. As such, these data are subject to reporting errors such as incorrect names, birthdates or arrest dates. Nonreporting of arrest data due to error or omission can also occur; for example, in 1995 the Oakland Police Department reported no DUI arrests, after reporting 960 such arrests in 1994. In addition, when data are entered into DOJ's Monthly Arrest and Citation Register (MACR) system, only the highest-order offense is included. Therefore, in cases where a DUI arrest is made in conjunction with, for example, an auto theft arrest, that DUI arrest will not be included in the database. This results in a slight but systematic underreporting of the number of DUI arrests annually.

DUI Conviction Data:

Abstracts of conviction for DUI and other traffic-related offenses are reported to the DMV by courts throughout the state. As abstracts are received (either hard copy, magnetic tape or through direct electronic access from the courts) they are entered onto the DMV driver record database. Abstracts without an identifying driver license number are run through the automated name index (ANI) system in order to match the abstract with an existing driver record; in cases where no such match can be made, an "X"-numbered record is created to store the abstract. The total number of DUI abstracts of conviction received by DMV from the courts is tallied monthly and annually. Since this workload total includes abstracts which amend, correct or dismiss prior abstracts of conviction, it tends to overestimate the actual number of convictions which have occurred. Conviction data are also subject to reporting and nonreporting errors similar to those for DUI arrests. For example, the 1993 Annual Report of the California DUI Management Information System documented the fact that thousands of DUI convictions appearing in court records do not appear on the DMV driver record database.

Alcohol-Involved Accident Data:

Accident data are reported to the California Highway Patrol (CHP) by local law enforcement agencies and district offices of the CHP. As such, these data are subject to reporting and nonreporting errors similar to those occurring in both DUI arrest and conviction data. While most local law enforcement agencies will investigate and file reports on accidents involving injury or death, the investigation and reporting of property-damage-only accidents varies widely by local jurisdiction. Data are entered onto CHP's Statewide Integrated Traffic Records System (SWITRS) and published in annual reports.

HISTORY OF MAJOR DUI LAWS IN CALIFORNIA SINCE 1975

AB 1078 (Jackson), effective 1/1/2002, removes the ten-year limit on certain vehicular manslaughter convictions, resulting in the permanent retention of these violations on the driver's record. These convictions would be considered by the court as "priors" for enhancing penalties upon subsequent conviction for DUI.

AB 803 (Torlakson), effective 1/1/2001, requires the court to order a person who is at least 18 years of age who is convicted of a first violation of driving-under-the-influence with 0.05% or more, by weight, of alcohol to attend the educational

component of a licensed DUI program; upon a second or subsequent conviction, the court is required to order the person, in addition to other penalties, to attend a 30-hour DUI program. If the person's license is suspended, the DMV cannot reinstate the driving privilege until the person provides proof of having completed the program as specified.

AB 1650 (Assembly Transportation Committee), effective 1/1/2000, is a committee bill intended to deal with transportation issues more efficiently by clarifying and making technical changes. This bill authorizes the DMV to impose a driver license suspension on those convicted of DUI in a water vessel involving injury; this remedies an oversight in existing law which provides for sanctions against drivers convicted of DUI in a water vessel without injury than for those with injury.

AB 762 (Torlakson), effective 7/1/99, extends the suspension period for a second-DUI offender from 18 months to two years, but allows the second offender to serve 12 months of the license suspension period, followed by a restricted license with continued enrollment in a treatment program and installation of an ignition interlock device; requires persons convicted of driving with a suspended or revoked license, where that suspension or revocation was based on prior DUI convictions, to install the ignition interlock device for a period not to exceed 3 years or until the driving privilege is reinstated, and requires DMV to study and report on the effectiveness of these devices. Judges are also encouraged to order installation of an ignition interlock device for first-time DUI offenders if there are aggravating factors such as high blood alcohol readings (0.20% or above), chemical test refusal, numerous traffic violations, or injury accidents. This law requires that upon a first DUI conviction, if a court grants probation, 1) the person's driving privilege shall be suspended for six months by the DMV, in addition to other penalties, or 2) the person may operate a motor vehicle restricted for 90 days, to and from work and alcohol treatment program, if the person establishes proof of financial responsibility and complies with other penalties and fees.

SB 24 (Committee on Public Safety), effective 7/1/99, cleans up AB 762, AB 1916, and SB 1186. This law requires the DMV to revoke for one year the driving privilege of any ignition interlock device-restricted driver who is convicted of driving a vehicle not equipped with an ignition interlock device (IID) under authority section 23247(g); requires the department to suspend or revoke the driving privilege of any IID-restricted driver [under section 23246(g)] if notified by an installation facility that the driver attempted to bypass, tamper with or remove the device, or has three or more times failed to comply with calibration or servicing requirements of the device; amends certain sections to specify that completion of a program equals enrollment, participation, and completion subsequent to the date of the current violation.

SB 1186 (Committee on Public Safety), effective 7/1/99, reorganizes specified provisions relating to DUI-related statutes by amending, repealing, and/or renumbering the DUI-related sections without making substantive changes to the statutes.

SB 1176 (Johnson), effective 1/1/99, requires that, upon a conviction of an alcohol-related reckless driving charge, the courts order enrollment in an alcohol and drug education program as a condition of probation. This bill also requires an evaluation

by the DMV of the effectiveness of the program and a discussion of the findings in its annual report to the Legislature.

SB 1890 (Hurt), effective 1/1/99, deletes the choice of the urine test from the options for chemical tests relating to operating a vehicle under the influence of alcohol, unless both the blood and breath tests are unavailable or where there is a condition that warrants the use of the urine test.

AB 1916 (Torlakson), effective 1/1/99, provides that the court shall, as a condition of probation, refer a first offender whose BAC level is less than 0.20%, by weight, to participate for at least three months (minimum 30 hours) or longer to a licensed education/counseling program; if the BAC level is equal to 0.20% or more, by weight, or the person refused to take a chemical test, the court shall order the person to participate for at least six months or longer in a program consisting of 45 hours of education/counseling activities; requires the DMV to submit an annual report to the Legislature on the efficacy of the increased drug and alcohol intervention programs; requires repeat offenders who have twice failed the programs to participate in a county alcohol and drug problem assessment program, and requires each county, beginning 1/1/2000, to prepare, or contract to be prepared, an alcohol and drug assessment report on each person ordered by the court to participate in an alcohol and drug assessment program.

AB 130 (Battin), effective 1/1/98, requires that any person guilty of a felony or misdemeanor DUI within 10 years of a prior felony offense be designated as a habitual traffic offender for a three-year period and have their driver license revoked for four years.

SB 1177 (Johnson), effective 1/1/98, requires that anyone convicted of a second or subsequent DUI within seven years of a separate DUI, alcohol-related reckless driving, or DUI with bodily injury violation, is ordered to enroll in, participate and complete a DUI treatment program, subject to the latest violation, as a condition of probation. The person is not to be given credit for any treatment program activities prior to the date of the current violation.

AB 1985 (Speier), effective 1/1/97, cited as "Courtney's Law"; provides that a person convicted of gross vehicular manslaughter while intoxicated and who has one or more prior convictions of vehicular manslaughter or multiple prior DUI convictions shall be punished by imprisonment in the state prison for a term of 15 years to life. Also, any person fleeing the scene of a crime after committing specified vehicle offenses which resulted in death, serious injury, or great bodily injury is subject to an additional five-year prison enhancement.

SB 1579 (Leonard), effective 1/1/97, permits DMV to suspend a driver license on a first FTA for DUI, and establishes an enhanced audit and tracking system to compare DUI arrests with subsequent actions.

SB 833 (Kopp), effective 1/1/96, permits peace officers to seize and cause the removal of a vehicle, without arresting the driver, when the vehicle was being operated by a person whose driving privilege was suspended or revoked or who had never been issued a license; requires an impounding agency to send a notice by certified, return receipt requested mail, to the legal owner of a vehicle that is impounded, and

specifies under what conditions an impounded vehicle may be released to the legal owner.

AB 321 (Connolly), effective 1/1/95, allows juveniles cited for driving under the influence, with a blood alcohol content (BAC) of 0.05% or more, by weight (Section 23140), to be charged with vehicular manslaughter (PC 192) or gross vehicular manslaughter (PC 191.5) if they violate these vehicular manslaughter laws.

SB 1295 (Lockyer), effective 1/1/95, requires every person convicted of a first DUI offense to submit proof of completion of a treatment program within a time period set by the department; requires the department to suspend the driving privilege for noncompliance, prohibits reinstatement until proof of completion is received by the department; enhances the required administrative driving privilege revocation for a minor who refuses to take or fails to complete a preliminary alcohol screening (PAS) test, to two years revocation for the second offense in seven years and three years revocation for the third and subsequent offenses; applies the VC section 23140 to drivers under age 21 (previously under age 18), making it unlawful to drive with a 0.05% BAC level or greater.

SB 1758 (Kopp), effective 1/1/95, permits a noncommercial driver, 21 years of age or older, who was arrested for a first Administrative Per Se DUI offense, who took a chemical test, and enrolled in an alcohol treatment program, to also obtain a restricted driver license, valid for driving to and from and during the course of that person's employment, after serving 30 days of the suspension period. The total time period for suspension/restriction shall be six months, rather than four months. Suspended/revoked and unlicensed drivers who drive are subject to having their vehicles towed and impounded for 30 days. If the driver is the registered owner of the vehicle and has a prior conviction for driving while unlicensed or suspended/revoked, the vehicle is subject to forfeiture to local authorities.

AB 2639 (Friedman), effective 9/30/94, repeals the statutes which authorized discretionary ignition interlock device (IID) orders (23235), although part of the repealed statutes were incorporated into the sections establishing mandatory orders (section 23246 et seq.). Previously, the discretionary IID orders applied to all DUI offenders, but now they apply only to first-DUI offenders. For third and subsequent offenders, the statutes are amended to clarify that the court must require proof of installation of the device before issuing an order granting a restricted license. Some of the exemptions to the IID orders were revised.

SB 126 (Lockyer), effective 1/1/94, amends Vehicle Code section 23161 to provide that if the court orders a 90-day restriction for a first offender, the restriction shall begin on the date of the reinstatement of the person's privilege to drive following the four-month administrative suspension; as part of the sentencing of repeat-DUI offenders, 23161 requires an ignition interlock device to remain on the vehicle for one to three years after restoration of the driving privilege; specifies that the person cannot operate a motor vehicle when the driving privilege is suspended or revoked even if the vehicle is equipped with an ignition interlock device; requires second offenders who have been suspended for 18 months to provide proof of financial responsibility and proof of successful completion of an alcohol or drug program in order to reinstate their license privilege, includes violation of 23140 for administrative suspension for minors driving with 0.05% BAC or greater.

SB 689 (Kopp), effective 1/1/94, prohibits a person under 21 years of age from driving with a blood alcohol concentration of 0.01% or greater, as measured by a preliminary alcohol screening (PAS) test; violators receive a one-year license suspension. A person under the age of 21 who refuses the PAS test will be suspended for one year.

AB 2851 (Friedman), effective 7/1/93, requires anyone convicted of a second DUI within seven years of a prior conviction to install an ignition interlock device on all their vehicles. The device must be maintained for a period of one to three years. Proof of installation must be provided to the court or probation officer within 30 days of conviction. If proof is not provided, the DMV will revoke the license for one year. Exceptions to installing a device are for medical problems, use of vehicle in emergencies, and driving the employer's vehicle during employment.

AB 3580 (Farr), effective 7/1/93, changes the effective date of administrative per se suspension from 45 to 30 days after the notice is given.

SB 1600 (Bergeson), effective 9/26/92, provides that DMV is required to suspend or revoke the licenses of those who drop out of an alcohol treatment program a second time.

AB 37 (Katz), effective 1/1/92, combines elements of the formal and informal review hearing into a single hearing for those who were suspended under the administrative per se laws, and provides that DMV need not stay a suspension or revocation pending review, if the hearing followed suspension or revocation for refusing a chemical test for alcohol or for driving with a BAC of 0.08 % or more.

SB 185 (Thompson), effective 1/1/92, amends Section 14602 to authorize the court to order the motor vehicle impounded for up to six months for a first conviction, and up to 12 months for a second or subsequent conviction of any of the following offenses: driving with a suspended or revoked license, violation of 2800.2 or .3 (evading a peace officer in a reckless manner, causing injury or death), within seven years of a violation of 23103, 23152, 23153, or penal codes 191.5 or 192(c).

AB 2040 (Farr), effective 9/28/90, repeals previous statutes authorizing the installation of ignition interlock devices in DUI cases. This urgency statute authorizes the installation of such devices in all DUI cases, permits the court to grant subjects revoked for 3 or more DUI-related violations a restricted license after 24 months of the revocation have passed. The restricted license is conditioned on satisfactory completion of 18 months of an alcohol treatment program, submission of proof of financial responsibility, and agreement to have an ignition interlock device installed in their vehicles. Courts are authorized to reduce the minimum DUI fine to allow the person to pay the costs of the device.

SB 1150 (Lockyer), effective 7/26/90, provides clean-up legislation for APS; lowers the BAC level from .10 to .08, requires proof of financial responsibility to reinstate from any APS suspension or revocation action, increases sanctions for implied consent refusals (one-year license suspension for no priors or APS actions, two-year license revocation for one prior or APS action, and three-year revocation for two or more prior DUI offenses or APS actions), and authorizes suspension or revocation actions taken under 13353 and 13353.2 CVC to be considered as priors.

- SB 1623 (Lockyer), effective 7/1/90, establishes authority for a peace officer to serve a notice of suspension or revocation (administrative per se or APS) personally on a person arrested for a DUI offense, to take possession of the driver license for forwarding to the department, and to issue a 45-day temporary operating permit; provides for an administrative review of the order, for an administrative hearing, and for a judicial review of the hearing, and provides for a fee, not to exceed \$100, to be assessed upon the return of the driver license.
- AB 757 (Friedman), effective 1/1/90, requires the DMV to establish and maintain a DUI data and recidivism tracking system to evaluate the efficacy of intervention programs for persons convicted of DUI. Annual reports are to be made to the Legislature.
- SB 310 (Seymour), effective 1/1/90, authorizes the courts to sell the vehicles of those registered owners who are found in violation of Penal Code 191.5 or 192 (C3), CVC 23152 which occurred within seven years of two or more convictions of 23152 or 23153, or a violation of 23153 which occurred within seven years of one or more convictions of 23152 or 23153 or the cited Penal Code sections.
- SB 408 (Leonard), effective 1/1/90, modifies AB 7 (Hart) to establish a BAC level of .08% or higher as per se evidence of impaired driving.
- SB 1119 (Seymour), effective 1/1/90 for vessel provisions and 1/1/92 for commercial driver provisions, prohibits the operation of a commercial vehicle by a person with a BAC of .04% or above; requires a commercial vehicle driver to be ordered out of service for 24 hours if found with a BAC at or above .01%, but less than .04%; establishes separate penalties for refusing to take or complete a chemical test based on the type of vehicle involved. Under this bill, a conviction of operating a vessel while under the influence of alcohol or drugs would also be treated as a DUI prior for driver license sanctions.
- SB 1344 (Seymour), effective 1/1/90, requires statewide implementation of 12-week (30-hour) first-offender alcohol education and counseling programs, and requires state licensing of such programs. This bill also adds 6 months of monitoring and follow-up to second offender programs, resulting in 18-month programs. It requires that DMV evaluate program effects on recidivism and report the findings to the Legislature.
- SB 1902 (Davis), effective 1/1/90, prohibits DMV from issuing or renewing a driver license unless the applicant agrees in writing to comply with a blood, breath, or urine test. This bill also designates drivers convicted of a third or subsequent DUI within 7 years as "habitual traffic offenders."
- AB 3134 (Harris), effective 1/1/89, allows the 4th DUI within 7 years to be charged as a felony or misdemeanor. The term of imprisonment to state prison or county jail is not less than 180 days and not more than one year. Allows for second offenders to attend either a one year or 30-month treatment program.
- AB 3563 (Killea), effective 1/1/89, authorizes the court to order DMV to suspend, revoke, or delay the driving privilege of a minor failing to show proof of completion of a court-ordered alcohol education program when convicted of Section 23140 CVC.

- SB 1300 (Campbell), effective 1/1/89, amends CVC 13202.5 to allow courts to suspend the license of a person under the age of 21 (changed from age 18) for one year, or delay the driving privilege of those 13 years or older, upon conviction of various alcohol and drug offenses, including open container violations.
- SB 1964 (Robbins), effective 1/1/89, requires all first-DUI offenders to file proof of insurance when applying for a restricted license or for reinstatement of the driving privilege following a period of license suspension.
- SB 885 (Royce), effective 1/1/88, requires that a person who was granted probation for a second DUI offense must show proof of financial responsibility in order to be eligible for the one-year restricted license.
- SB 1365 (Seymour), effective 1/1/88, establishes a 30-month alcohol treatment program as an alternative to the 12-month program for third and subsequent DUI offenders, in counties where such a program exists. In these cases, imprisonment in the county jail shall be imposed for at least 30 days, but not more than one year, in lieu of the 120-day minimum jail term.
- AB 2558 (Duffy), effective 1/1/87, provides that gross vehicular manslaughter while intoxicated is punishable in the state prison for 4, 6, or 10 years. Former Section 192(c3) was deleted and incorporated into 191.5(a).
- AB 2831 (Killea), effective 1/1/87, makes it unlawful for a minor to drive with a BAC of .05% or more (Section 23140 CVC). A conviction of this violation requires completion of an alcohol education program or alcohol-related community service program.
- SB 2206 (Watson), effective 1/1/87, authorizes a county to develop and administer an alcohol and drug problem-assessment program, which could include a pre-sentence alcohol and drug problem-assessment report for persons convicted under CVC 23152 or 23153, and referral to treatment program with follow-up tracking.
- SB 2344 (Lockyer), effective 1/1/87, extends the sentencing period for prior DUIs from five to seven years, and specifies a 3- to 5- year probation term for a DUI conviction.
- SB 3939 (Farr), effective 1/1/87, authorizes courts to order the installation of ignition interlock devices for repeat offenders in four counties, and establishes a pilot project to evaluate the effectiveness of the devices.
- SB 925 (Seymour), effective 7/1/86, extends the period of license suspension for second-misdemeanor offenders from one year to 18 months, and also requires that offenders with three or more DUI convictions show proof of treatment completion in order to have their licenses reinstated.
- AB 144 (Naylor), effective 9/29/85, requires the court to take into consideration in a DUI case a blood alcohol concentration of 0.20 percent or above, or a refusal to take a chemical test, as special factors in the enhancing of penalties for sentencing or to impose additional terms and conditions of probation.

SB 1441 (Petris), effective 1/1/85, requires a 3-year license revocation for persons with two or more DUI or alcohol-related reckless convictions within five years of refusing a chemical test.

SB 1522 (Alquist), effective 1/1/85, retains existing law for first offenders, which authorizes courts to impound a vehicle at the registered owner's expense for up to 30 days if the driver was convicted of DUI pursuant to CVC 23152 or 23153. The same time period for impoundment is required for second offenses within five years. For third and subsequent offenses, the vehicle can be impounded at the registered owner's expense for up to 90 days. Exceptions to the required impoundment arise "where the interests of justice would best be served by not ordering impoundment." Another limitation is that no vehicle driven by a class 3 or 4 licensee is subject to impoundment if another person has a community property interest in the vehicle, and it is the only vehicle available to the driver's family.

AB 624 (Moorhead), effective 1/1/84, requires a one-year license revocation for minors (up to age 18) for a DUI conviction (Sections 23152, 23153 CVC).

SB 1601 (Sieroty), effective 7/1/82, modifies AB 541 provisions by requiring that SB 38 participants establish proof of insurance in order to remove the license restriction at the end of six months. In addition, SB 38 participants who dropped out of the program are given two more opportunities to reenroll, instead of receiving an immediate license suspension. Program providers are also required to report dropouts directly to DMV.

AB 7 (Hart), effective 1/1/82, makes it a misdemeanor under CVC 23152(b) to drive a vehicle with a blood alcohol concentration (BAC) level of .10% or higher. Drivers with lower BAC levels (.05 - .09%) can be convicted of DUI when sufficient behavioral evidence of impairment is apparent.

AB 541 (Moorhead), effective 1/1/82, establishes that under CVC 23152(a), driving under the influence of an alcoholic beverage or drugs or their combined influence is a misdemeanor, while felony charges are filed under CVC 23153, and alcohol-related reckless charges are filed under CVC 23103.5. A conviction under 23103.5 constitutes a prior for a second offense (but not for third offenses). The penalties imposed are a 90-day license restriction (work- and treatment-related driving only) and referral to an alcohol education program for most first offenders; a 1-year license restriction for second offenders who enroll in an approved 12-month alcohol treatment (SB 38) program. First offenders not placed on probation receive a 6-month license suspension. Second offenders not assigned to an alcohol program are suspended for one year. A minimum jail term of 48 hours is mandatory for all repeat offenders, and a minimum fine of \$390 is assessed for all DUI offenses. Offenders with three or more DUI or alcohol-related reckless driving convictions receive a 3-year license revocation along with a jail term and fine, and a small proportion are referred to a 12-month SB 38 program. Enrollment in the program cannot be substituted for license revocation. The period defining prior DUIs changes from seven to five years. Convictions of a DUI offense with bodily injury or fatality, when prosecuted as a felony, continue to result in more severe penalties (such as longer license actions and jail terms) than the misdemeanor offenses. The only change in the 1982 law for felony second offenders is that those participating in the SB 38 program will receive a license suspension for one year and a license restriction for two years.

SB 38 (Gregorio), effective 1/1/78, extends the pilot 12-month alcohol treatment program for repeat offenders statewide.

SB 330 (Gregorio), effective 1/1/76, permits repeat DUI offenders in four counties to participate in a 12-month pilot alcohol treatment program in lieu of the usual 12-month suspension or 3-year revocation.

GLOSSARY

ADMINISTRATIVE PER SE (APS)

Administrative per se ("on-the-spot") license suspension or revocation occurs immediately pursuant to lawful arrest of a person driving with a blood alcohol concentration (BAC) of 0.08% or more, or one who refuses a chemical test. Upon arrest, the driver's license is immediately confiscated by the law enforcement officer and an order of suspension or revocation served. The driver is issued a temporary license and allowed due process through administrative review. In July 1990, California became the 28th state to implement APS. In January 1994, California

enacted a "zero tolerance" statute which requires the administrative suspension of any driver under age 21 with a BAC of 0.01% or greater, or who refuses to be tested.

ALCOHOL-INVOLVED ACCIDENT

Alcohol-involved accidents are those in which the investigating law enforcement officer indicates on the accident report that the driver "had been drinking (HBD)." Accidents involving drivers who are determined to be under the influence of drugs other than alcohol (typically less than 1% of all accidents) are also included in the alcohol-involved accident category.

ALCOHOL-RELATED RECKLESS DRIVING

Commonly called a "wet" reckless, alcohol-related reckless driving refers to an arrest/conviction incident which originated as a DUI arrest. DUI arrests involving drugs which are reduced to reckless driving are also referred to as alcohol-involved or "wet" reckless driving. "Wet" reckless convictions count as priors for the purposes of enhanced penalties upon subsequent conviction of DUI.

ALPHA

Alpha is the investigator's acceptable risk or probability level of making a Type 1 error (generally chosen to be small—e.g., 1% or .01, 5% or .05). There is always some risk of a Type 1 error, so alpha cannot be zero. Alpha is also called the significance level, because it is the criterion for claiming statistical significance.

BAC

Blood alcohol concentration, or BAC, is a measure of the percent, by weight, of alcohol in a person's blood. Statutorily, BAC is based upon grams of alcohol per 100 milliliters of blood or per 210 liters of breath.

CONVICTION

Conviction of an offense, as used in this report, refers to the receipt by DMV of a court abstract of conviction. In a small proportion of cases, an offender may be convicted of an offense but that conviction is not reported to DMV. Such cases would functionally be treated by DMV as though the offender had not been convicted. Because convictions can be amended, corrected, dismissed or simply not reported at all, the conviction totals reported herein are dynamic and subject to change.

COVARIATE

A variable used to statistically adjust the results of an analysis for differences (on that variable) existing among subjects prior to the comparison of treatment effects.

DUI

DUI is an acronym for "driving under the influence" of alcohol and/or drugs, a violation of Sections 23152 or 23153 of the California Vehicle Code.

LOGISTIC REGRESSION

Logistic regression analysis is a statistical procedure evaluating the linear relationship between various factors and the occurrence or nonoccurrence of an outcome event. In this study, the procedure was used to explain the relationship between the various sanctions and the proportion of DUI offenders who incurred accidents and/or DUI incidents.

MAJOR CONVICTION

Major convictions include primarily DUI convictions, but also reckless driving and hit-and-run convictions.

p

p stands for probability. For example, if $p < .05$, the probability is less than 5 chances in 100 that the difference you found is by chance alone.

QUASI-EXPERIMENTAL DESIGNS

Quasi-experimental designs refer to analyses where the comparison groups are not equivalent on characteristics other than the treatment conditions because random assignment was not used. Caution should be exercised when interpreting the results because of possible confounding of group bias with treatment effects. Covariates are used to statistically reduce group differences prior to the comparison of treatment effects.

SIGNIFICANT (STATISTICALLY)

If the result of a statistical test is significant, this means that the difference found is very unlikely by chance alone. How unlikely is determined by alpha.

APPENDIX A

Assembly Bill No. 757

CHAPTER 450

An act to add Section 1821 to the Vehicle Code, relating to driving offenses.

(Approved by Governor September 14, 1989. Filed with Secretary of State September 15, 1989.)

LEGISLATIVE COUNSEL'S DIGEST

AB 757, Friedman. Driving offenses: intervention programs: evaluation.

Under existing law, the Department of Motor Vehicles maintains records of driver's offenses reported by the courts. Including violations of the prohibitions against driving while under the influence of an alcoholic beverage, any drug, or both, driving with an excessive blood-alcohol concentration, or driving while addicted to any drug.

This bill would, additionally, require the department to establish and maintain a data and monitoring system, as specified, to evaluate the efficacy of intervention programs for persons convicted of those violations relating to alcohol and drugs, and to report thereon annually to the Legislature.

The bill would declare legislative findings.

The people of the State of California do enact as follows:

SECTION 1. The Legislature finds and declares as follows:

(a) Drivers under the influence of drugs or alcohol continue to present

a grave danger to the citizens of this state.

(b) The Legislature has taken stern action to deter this crime and punish its offenders and has provided a range of sanctions available to the courts to use at their discretion.

(c) No system exists to monitor and evaluate the efficacy of these measures or to determine the achievement of the Legislature's goals.

(d) This lack of accurate and up-to-date comprehensive statistics hampers the ability of the Legislature to make informed and timely policy decisions.

(e) It is essential that the Legislature acquire this information, from available resources, as soon as practicable, and that this information be updated and transmitted annually to the Legislature.

SEC. 2. Section 1821 is added to the Vehicle Code, to read:

1821: The department shall establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted of violations of Section 23152 or 23153.

The system may include a recidivism tracking system. The recidivism tracking system may include, but not be limited to, jail sentencing, license restriction, license suspension. Level I (first offender) and II (multiple offender) alcohol and drug education and treatment program assignment, alcohol and drug education treatment program readmission and dropout rates, adjudicating court, length of jail term, actual jail or alternative sentence served, type of treatment program assigned, actual program compliance status, subsequent accidents related to driving under the influence of alcohol or drugs, and subsequent convictions of violations of Section 23152 or 23153.

The department shall submit an annual report of its evaluations to the Legislature. The evaluations shall include a ranking of the relative efficacy of criminal penalties, other sanctions, and intervention programs and the various combinations thereof.

APPENDIX B

TABLE B1: 2001 DUI ARRESTS BY COUNTY, AGE, SEX AND RACE/ETHNICITY

| COUNTY | AGE | TOTAL | SEX (100%) | | | | RACE/ETHNICITY (100%) | | | | | | | |
|-----------|------------|--------|------------|-------|--------|------|-----------------------|-------|----------|------|-------|------|-------|------|
| | | | MALE | | FEMALE | | WHITE | | HISPANIC | | BLACK | | OTHER | |
| | | | N | % | N | % | N | % | N | % | N | % | N | % |
| STATEWIDE | | 176490 | 149653 | 84.8 | 26837 | 15.2 | 75199 | 42.6 | 77793 | 44.1 | 12395 | 7.0 | 11103 | 6.3 |

| Statistical significance test | | $\chi^2 = 25.78^*$ | $F = 4.7^*$ | $\chi^2 = 5.59$ | $F = .223$ | $F = .398$ | $F = 45.2^*$ | $F = 6.5^*$ | $F = 83.6^*$ | $F = 10.3^*$ | $F = 98.4^*$ | $F = 7.6^*$ |
| 2000 (1-year follow up) | | | | | | | | | | | | |
| Suspension | 3,949 | 12.3 | 36.0 | 2.3 | 3.3 | 1.9 | 4.0 | 7.5 | 1.57 | .40 | .50 | 2.08 |
| SB 38 program & restriction | 4,628 | 12.9 | 35.5 | 2.5 | 3.6 | 2.1 | 5.1 | 8.1 | 1.61 | .41 | .46 | 2.11 |
| SB 38 program & Interlock | 1,579 | 12.1 | 36.3 | 2.6 | 3.4 | 2.1 | 3.6 | 6.7 | 1.58 | .40 | .42 | 2.03 |
| Other | 11,520 | 11.8 | 36.8 | 2.5 | 3.3 | 2.0 | 3.2 | 6.8 | 1.63 | .42 | .47 | 2.18 |
| Statistical significance test | | $\chi^2 = 3.5$ | $F = 18.8^*$ | $\chi^2 = .693$ | $F = 2.37$ | $F = 2.41$ | $F = 155.11^*$ | $F = 18.05^*$ | $F = 49.8^*$ | $F = 42.9^*$ | $F = 56.8^*$ | $F = 56.8^*$ |

*Statistical significance at $p < .05$. (two-tailed).

**The ZIP Code indices for the 1998 and 2000 cases are based on 3.25 years of driver record data.

***These violations are undercounted for the 1998 cases due to an error in the program that tallies these violations. The counts for the 2000 cases are correct.

TABLE B6: DEMOGRAPHIC 2-YEAR PRIOR DRIVER RECORD VARIABLES BY YEAR AND SANCTION GROUP
FOR ALCOHOL-RELATED RECKLESS AND 3- AND 6-MONTH ALCOHOL PROGRAM DRIVERS
